4. When you are keying your mobile to identify, it is a great idea to make sure the mic is keyed before you say your call sign. A lot of new radio amateurs have never used an old rig that has a half second delay between keying the mic and the relay in the rig opening the mic. So if you key the mic and just wait a half second before announcing KB9BVN Mobile, or Listening, or Monitoring...we'll all hear your call sign and know who you are...otherwise all we hear is VN mobile...

5. I'm the most guilty of this one, let the repeater drop between transmissions. If XYZ keys up and says his piece, wait until the repeater drops before keying your mic and jumping in there. I know, it's hard not to jump in on the tail end of a transmission...but there are other ops out there that might be waiting for a 2 second break so they can get a word in edgewise.

6. Pass it around...when in a group, like morning or evening drive time, when you are done with your transmission, GIVE the freq to someone. Example...and that's what I did this weekend, over to KB9BVN. Then KB9BVN says his and then sends it to another op in the group and so on and so forth. That way everyone that wants to be in on the conversation gets a chance to talk and we're not doubling and tripling all over each other.

7. When a person comes on the freq, and doesn't give his/her callsign, do not talk to them. It is against Part 97 to converse with an unlicensed station in the amateur radio bands. Yes, they're stupid. Yes, they're ugly. Yes, their mom wears combat boots. We all know that for a fact, so don't break the law and waste your breath by telling them on the air. Trust me, they already know it.

8. Another one I am guilty of, and must work to stop doing...Q codes. Q codes are for CW operators. Is it against the law to use Q codes on the FM repeaters? Not that I know of. It's just how how things are done though. You can't QSY to the kitchen.

I think that's it. This is not aimed at any one person in particular....or no people in particular...just my afternoon rant while I contemplate dinner.

So you've recently passed the test and you now have your brand new Amateur Radio license in hand. Congratulations on a job very well done, and I sincerely welcome you to the fraternity. I hope you learn more about radio and electronics over the next few years than you ever knew before. Now that you have a VHF or UHF rig at your disposal, let's briefly discuss some operating habits.

1. In amateur radio, we have names. Not handles, not personals, just names. I know, it's more fun sometimes to say things like handle and personal, but let's try to stick to names. Sometimes a new guy or gal will forget and that's OK, just try to remeber when in the amateur bands, we use our names, and our FCC issued call signs.

2. There is no word "destinated". "Roger that", "10-4" and "Motion Lotion" are not amateur radio terms either. Although I have been guilty of using all four of those at one time or another.

3. Amateur Radio operators learn a standard set of phonetics for the English alphabet. You needed to know them for your test, so why not use them on the air like you're supposed to. Do you break the law by saying Big Violet Nighties instead of Bravo Victor November? I don't think so but it's not what other radio amateurs are expecting. Sometimes cute phonetics can cost you a nice DX contact because they can't understand what you're saying.

4. When you are keying your mobile to identify, it is a great idea to make sure the mic is keyed before you say your call sign. A lot of new radio amateurs have never used an old rig that has a half second delay between keying the mic and the relay in the rig opening the mic. So if you key the mic and just wait a half second before announcing KB9BVN Mobile, or Listening, or Monitoring...we'll all hear your call sign and know who you are...otherwise all we hear is VN mobile...

5. I'm the most guilty of this one, let the repeater drop between transmissions. If XYZ keys up and says his piece, wait until the repeater drops before keying your mic and jumping in there. I know, it's hard not to jump in on the tail end of a transmission...but there are other ops out there that might be waiting for a 2 second break so they can get a word in edgewise.

6. Pass it around...when in a group, like morning or evening drive time, when you are done with your transmission, GIVE the freq to someone. What advice to you have in being polite with cell phone use and radio. So many times someone has joined into the conversation on a repeater and then they are suddenly gone. Without giving their call to end their transmissions. We all wonder what happened or where they suddenly went. We hear silence as we all wait with anticipation to see if our fellow ham is going to take advantage of the air time being handed back to them.... Then later we get a "sorry I got a call...." wanting then to be brought up to speed with the conversation.

Perhaps the person on the other end of the phone would be kind enough and understanding enough to wait while you then politely clear from the repeater when given a chance? Don't they know you are on a mobile device(cell phone) and may have to be excused from what they interrupted?

I think cell phones have made the world so much more rude that ever before. I'd take a 10-4 over a "I had a cell phone call.... Uhhhh..... Sorry .... Um..... " any day

Just more 2 cents. "over"

2804. FM repeater protocols and conventions.

Yahoo group: IndyHamRadio
Date: 2011-06-02 02:26:21 UTC
From: kc9brz
Topic: 2804 Message: 2804

Big Velvet Nightie (Brian): all good stuff.

One thing I'd like to riff on, not to pick at what you wrote, but at someone else, (not on this Yahoo group) who shall remain un-named and who seems to get confused about what is a good on-air convention and what is an FCC requirement. He's well-meaning and mostly helpful, but sometimes I just want to tweak him and yank his chain when he goes overboard, and say to him "10-4 good buddy!"

Regarding codes (10 codes or Q codes or whatever) on FM repeaters, the relevant FCC reg is 97.113(a)(4):

(a)No amateur station shall transmit:
(4) Music using a phone emission except as specifically provided elsewhere in this section; communications intended to facilitate a criminal act; messages encoded for the purpose of obscuring their meaning, except as otherwise provided herein; obscene or indecent words or language; or false or deceptive messages, signals or identification;

Being that "10-4" is well understood in the United States, and QTH is well understood in the ham radio community, they don't obscure anything; and therefore their use doesn't fall under the phrase "for the purpose of obscuring their meaning". If your "code" doesn't obscure anything, then it's not a violation. If someone spells out a cuss word in Hexadecimal Ascii, then it might.

I've heard one of the local self-appointed repeater cops gets on people's case about "10-4" being a "code", and thereby prohibited by part 97. However, if the meaning is not obscured, it's not illegal. But you're right, it's not good ham radio convention or protocol.

Now I suppose the obscurity of other 10-codes could be debated. Not even all police departments use the same set of 10-codes. The only ones besides 10-4 that I remember hearing are 10-100 and 10-200 from "Smokey and the Bandit" movie. (Along the lines of "BRB GGP" in text/chat room speak.)

2806. Ham Radio dinner June 18th @ 7pm

Yahoo group: IndyHamRadio
Date: 2011-06-03 00:07:53 UTC
From: Rhonda
Topic: 2806 Message: 2806

We have had several requests for Mexican so we decided to have June's dinner at El Jaripeo, 10417 E. Washington St here in Indy. We were there the other day and the food was really good.

This dinner is open to all ham radio operators and their families. If you haven't joined us before, we would love to have you. If you have, we look forward to seeing you again.

73,

Rhonda

2807. ARRL VHF QSO Party, 1800 UTC Saturday, 6/11 - 0300 UTC Monday, 6/13

Yahoo group: IndyHamRadio
Date: 2011-06-03 15:26:41 UTC
From: Mark Thompson
Topic: 2807 Message: 2807

http://www.arrl.org/june-vhf-qso-party

ARRL June VHF QSO Party Rules
1.Object: To work as many amateur stations in as many different 2 degrees by 1 degree grid squares as possible using authorized frequencies above 50 MHz. Foreign stations work W/VE amateurs only.
2. Date and Contest Period: The second full weekend in June. Begins 1800 UTC Saturday, ends 0300 UTC Monday (June 11-13, 2011).
3. Entry Categories:
3.1 Single Operator.
3.1.1. Low Power
3.1.2. High Power
3.2 Single Operator Portable.
3.3 Rover. A rover is comprised of no more than two operators that moves among two or more grid squares during the course of a contest. An operator may perform any or all rover functions, but a driver's function shall be limited to driving the vehicle. Drivers may be switched out during the event. Any number of observers is also allowed, however observers may not perform any rover function at any time. Rover vehicles with only one occupant are allowed to perform all functions listed above.
3.3.1. A rover vehicle may transport only one station using a single call sign. An exception is provided for in "General Rules for All ARRL Contests" number 3.5 (Family Rule).
3.3.2. A rover may not operate with more than one call sign.
3.3.3. Rover vehicles must transport all the equipment, power supplies, and antennas used at each operating site.
3.3.4. Rovers MUST sign "rover" on Phone and /R on CW and digital modes after their call sign.
3.3.5. All Rovers are encouraged to adopt operating practices that allow as many stations as possible to contact them.
3.3.6. Rover operators may submit separate logs for single operator (fixed station) in addition to their rover entries. Rovers submitting a score for inclusion in a club competition must also include a secondary summary sheet indicating the portion of the score that counts for the club score if any of the QSOs submitted take place outside of their club's territory.
3.3.7. Rovers are permitted to use APRS. Rovers using APRS transmit only their call sign and position. Any multi-op station may access rover APRS data directly or via the Internet.
3.3.8. A rover may not make more than 100 QSOs with any other one rover.
3.4. Limited Rover. Same as the "Rover" class above, but operation is permitted only on the 6 Meter, 2 Meter, 220 MHz and 432 MHz bands. Output power limits shall be the same as those defined for the Single Operator Low Power category.

3.5 Unlimited Rover. Same as “Rover” class above, but Unlimited Rovers may use more than two operators and are exempt from rules 3.3.3 and 3.3.8.
3.5.1. Unlimited Rover scores may NOT be applied to a club score for Club Competition.
3.6. Multioperator:
3.6.1. Multioperator (Unlimited): Stations submit logs with more than four bands used.
3.6.2.Limited Multioperator: Stations submit logs with a maximum of four bands used. (Logs from additional bands used, if any, should be included as checklogs.)
4. Exchange: Grid-square locator (see April 1994 QST, p 86).
4.1. Exchange of signal report is optional.
5. Scoring:
5.1. QSO points:
5.1.1. Count one point for each complete 50- or 144-MHz QSO.
5.1.2. Count two points for each 222- or 432-MHz QSO.
5.1.3. Count three points for each 902- or 1296-MHz QSO.
5.1.4. Count four points for each 2.3 GHz (or higher) QSO.
5.2. Multiplier: The total number of different grid squares worked per band. Each 2 degrees by 1 degree grid square counts as one multiplier on each band it is worked.
5.3. Final score: Multiply the total number of QSO points from all bands operated by the total number of multipliers for final score.
5.4. Rovers only: The final score consists of the total number of QSO points from all bands times the sum of unique multipliers (grid squares) worked per band (regardless of which grid square they were made in) plus one additional multiplier for every grid square from which they successfully completed a contact.
5.4.1. Rovers are listed in the contest score listings under the Division from which the most QSOs were made.
6. Reporting:
6.1. Entries may be submitted as follows:
6.1.1. Electronic submissions in the Cabrillo format may be emailed to JuneVHF@...
6.1.2. Hand written paper logs or diskettes mailed to June VHF, ARRL, 225 Main St, Newington, CT 06111.
6.1.3. Web entries submitted via the web-based applet at:http://www.b4h.net/cabforms/
6.2. Entries that have been electronically generated must submit their log file in the Cabrillo file format. Paper print outs of electronic files are not acceptable substitutes.
6.3. Entries must be emailed or postmarked no later than 0300 UTC Wednesday, July 13, 2011. Late logs may be designated as checklogs only.
7. Miscellaneous:
7.1. Stations may be worked for credit only once per band from any given grid square, regardless of mode. This does not prohibit working a station from more than one grid square with the same call sign (such as a Rover).
7.2. Only one signal per band (6, 2, 11/4, etc) at any given time is permitted, regardless of mode.
7.3. Multi-operator stations may not include QSOs with their own operators

except on frequencies higher than 2.3 GHz. Even then, a complete, different station (transmitter, receiver and antenna) must exist for each QSO made under these conditions.
7.4. Forms may be obtained by:
7.4.1. Downloading the form here.
7.4.2. Sending an SASE with 2 units of postage to June VHF Form Request, ARRL, 225 Main St, Newington, CT 06111.
8. Awards: Certificates will be awarded in the following categories:
8.1. Single Operator.
8.1.1. Top Single Operator Low and High power entry in each ARRL/RAC Section.
8.1.2. Top Single Operator Low and High power on each band (50, 144, 222, 432, 902, 1296 and 2304-and-up categories) in each ARRL/RAC Section where significant effort or competition is evident. (Note: Since the highest score per band will be the award winner for that band, an entrant may win a certificate with additional single-band endorsements.) For example, if W1INF has the highest Single-Operator all-band score in the CT Section and his 50- and 222-MHz scores are higher than any other CT single operator's, he will earn a certificate for being the single-operator Section leader and endorsements for 50 and 222 MHz.
8.2. Top Single-Operator Portable in each ARRL/RAC Section where significant effort or competition is evident. (Single-operator Portable entries are not eligible for single-band awards.)
8.3. Top Rover, Limited Rover and Unlimited Rover in each ARRL Division and Canada where significant effort or competition is evident. (Rover entries are not eligible for single-band awards.)
8.4. Top Multioperator score in each ARRL/RAC Section where significant effort or competition is evident. (Multioperator entries are not eligible for single-band awards.)
8.5. Top Limited Multioperator in each ARRL/RAC Section where significant effort or competition is evident. (Limited multioperator entries are not eligible for single-band awards.)
8.6. Plaques, if sponsored, will be awarded in the following categories:
8.6.1. Top Overall Single Operator (both High and Low Power) scorers.
8.6.2. Top Overall Single Operator Portable scorer.
8.6.3. Top Overall Rover, Limited Rover and Unlimited Rover scorers.
8.6.4. Top Overall Multi-Operator scorer.
8.6.5. Top Overall Limited Multi-Operator scorer.
8.6.6. The leading scorer in each entry category for each ARRL Division, Canada, Mexico, and DX (non-W/VE/XE) station.
9. Other:
9.1. See "General Rules for All ARRL Contests" and "General Rules for ARRL Contests on bands above 50 MHz (VHF)"

2808. Harbor Freight clearance/closeout, June 10-12.

Topic: 2808 Message: 2808

I was just at Harbor Freight and got my free pair of work gloves, a cheapy rotary tool for $6.99, and a 4.5" ac-electric-powered angle grinder for $9.99 using Sunday's coupons. (Like KB9-Big-Velvet-Nightie said, I didn't even know I needed an angle grinder, but they're good for cutting through metal and bolts.)

They got 4 flyers going on that might be of interest for hams and outdoorsy folks, so be patient here.

They do like most stores: over-price their junk, then run "sales" to get the prices down to decent level. So essentially, you should never pay "list" price (unless you absolutely have to have it now); try to get the "sale" price or better.

Those "coupon prices" in the Sunday papers _are_ the _good-deal_ prices since they are lower than even 'sale price'.

IE, in decreasing dollar amount: list price, sale price, coupon price.

1. One flyer for a "sale" going on all the month of June. Not the best of prices, but lower than their "list" price. I consider these "sale" prices to be "regular" or "decent".

2. Another "sale" going on from June 1 through 19th. (One item is a 45 watt solar panel kit for $170. Includes panels and controller but no battery and no inverter.)

3. Another "sale" going on from June 20th through July 4th. (No obvious ham stuff on this one, but some outdoorsy stuff.)

4. Liquidation/closeout/clearance sidewalk sale Fri June 10 through Sun June 12th. 50% discount Friday. 60% discount Sat. 70% discount Sunday. This has an automatic wrist blood pressure monitor/cuff for $15. (cuz all those burgers and brats cooked outdoors are going to clog our arteries and raise our blood pressure) A 700 Watt/1500 Watt peak inverter for $30. (list $50). Rotary tool kit for $7, for drilling, engraving, trimming/cutting/polishing.

If you want to be on their email list to get these notices, go to their web site.

This stuff is made in mainland commie China. Depending on how you look at it, the profit they make on this is loaned back to our government to buy our debt, or building up the Chinese military, or educating their college kids to take over the world.

1a. ARVN Video of Complete 2010 Dayton D-STAR Forum
Posted by: "Gary Pearce KN4AQ" kn4aq@... kn4aq
Date: Fri Jun 3, 2011 8:10 am ((PDT))

Hi, everyone,

I've just put the ENTIRE 2010 D-STAR Friday Afternoon Forum from the Dayton Hamvention up on my web site. This isn't a preview, it's the whole thing! YouTube just lifted my 10 minute restriction, and I'm celebrating - woohoo!

Well, really I feel bad that I never got to editing the 2010 Hamvention footage. But I'm getting an early jump on everything I shot this year, and I'm including stuff I did last year, and this is first out of the box.

This is 2010, not 2011. 2011 is coming in a few weeks. But there's lots of really good, and still current info in this forum. It has Robin Cutshaw AA4RC on the DVDongle, DVAP and DPLUS; Dan Smith KK7DS on D-RATS; and Greg Lake G4ULF on his non-ICOM D-STAR repeaters.

If you've never seen an ARVN DVD, this is a good introduction. There is a lot of ham radio and Hamvention footage on YouTube. I think you'll see... and HEAR... a big difference with ARVN. The presenters are miked. The audience is miked for Q&A. Multiple cameras, including one dedicated to the slide screen so you see everything. No boomy, reverb-filled sound, shaky cameras and fast swishes to the slides (or missing slides). And they're edited to remove the dead spots, like when computers doing the presentations crash! (Maybe we should leave that in).

So this one's free! I can't do it ALL free, sadly. But the DVDs are reasonable - typically $15 to $20 (Dayton DVDs are $15, plus $3 shipping).

It's in the Dayton section of my web site: www.arvideonews.com. There's a little link at the top right - I'll be making a bigger splash once the whole 2011 collection is done.

While you're there, check out "The Last BIG Field Day," my new documentary. Not one second of D-STAR, but hams don't live by bits alone, except maybe Robin.

73,
Gary KN4AQ

From: kc9brz
Topic: 2817 Message: 2817

Yesterday (Sunday June 12, 2011), the Indy Star newspaper
(hardcopy edition) had a flyer for Harbor Freight.

Coupons of interest to hams, might be:

-- FREE 7 function digital multimeter with any purchase.

-- 20% off coupon for any non-sale item.

-- 800 watt (900 watt max) portable generator, $90.

-- automatic battery float charger, $5.

-- 10/2/55 amp, 6/12 volt battery charger/engine starter.

=======

They have two stores in Marion County. One in Castleton,
5703 E 86th St) and one on the south side on US 31, just
north of I-465, (4200 S. East St, # 12A).

It is almost time for the Indianapolis Hamfest, July 9. Indiana's largest hamfest outdoor flea market. If you are looking to sell, there are a few tables available in the commercial building, also inside the flea market tent, and of course plenty of room in the outdoor flea market on a first come first serve basis. You can reserve tables, BUT not outdoor flea market spaces, by going to the Indianapolis Hamfest web site:

http://www.indyhamfest.com/

Click the TICKET tab and fill out the form, and of course there may be tables available the day of the hamfest.

Check out the Forums:

9am ARRL
10am Combined MARS meeting
11am APRS for Beginners
12pm Indiana Radio Club Council
1pm Indiana Repeater Council

Save $2 by buying you ticket in advance at these locations:

Yahoo group: IndyHamRadio
Date: 2011-06-19 19:22:07 UTC
From: W9FG
Topic: 2820 Message: 2820

This pair has been sitting in a basement with fitted covers, for 20+ years. the owner was a Technician Plus. The cabinets, knobs, front panels, meter faces, are an 8-9. No extra holes or modifications. Both appear to have the original power cords (white).
SB-401 appears to have not been operated very much. Powers on, panel lights and tubes light. High voltage reads 400 volts. All controls turn, rotate and switch. VFO control rotates through its entire range.
SB-301 is a little dirtier, operated more often. Switches feel dirty. The tuning knob does not turn through the entire range. Turns about 5 revolutions then feels like it hits a hard stop. Powers on, no panel lights, tubes light, meter deflects.
Nice looking pair.
$175 for both or $100 individual. I am in the Indianapolis area and can deliver to the Indianapolis Hamfest, July 9th.

2824. Field Day Operators Needed

Yahoo group: IndyHamRadio
Date: 2011-06-22 14:36:39 UTC
From: w9dew
Topic: 2824 Message: 2824

Tom Chance asked me to pass this along.

Calling all Central Indiana Hams,

Field day is this weekend, it starts Saturday at 2PM and runs until Sunday 2PM.

Tom Chance (who is heading up the Marion County fair grounds group) has asked me (Bill Kennedy, WY9T) to help the team put together an operator schedule for this year, ie: get people to sign up for an hour or two this weekend :)

We have a super setup this year. We will be using the sheriff's building at the Marion County fairgrounds. Its a great location with bathrooms and lighting (though all field day radios will be using generator power only). There will be 3 HF stations (1 full time CW station and 2 full time SSB stations), a VHF station, and a GOTO station (the Get On The Air station, run by W9PSE).

We hope to fill out the whole schedule in the next few days so we need to get cracking on this.

I know many of you operate with this group every year. In fact, I assisted Tom with the scheduling in 2008 and know that most of you will be participating again this year. So if your an old hand and will absolutely be with us this year please respond to this email at your earliest convenience (like today, please) and drop me a quick note at wy9t@.... Let me know what hours you'll be available, if you want to operate phone or code and whether you'll be staying for the whole 24 hour period. If you'd like to help on Saturday and then come back on Sunday let me know that too.

If its been a while since your last field day (or you've never stopped by to visit before) please consider visiting the group this year and see how this whole thing works. Over the last couple of years Tom has put together a big operation and over 80 people participated last year. Its a great bunch of guys and gals having a blast and it looks like the long range weather forecast is shaping up real nice.

We hope to make this the biggest effort ever so if your sitting on the fence please give it a shot and drop me a note. You don't have to be there for the whole event. The operating schedule is for 1 hour blocks of time. If you'd like to volunteer for just an hour and then call it a day that is absolutely fine. But if you want to hang around for an hour or two or the afternoon/evening please do. We have 72 one hour time slots to fill so there please volunteer if you can. Some ops run a 2 hours shift without a break so let me know if you can do that.

There will be about 20,000 field day operation this year which makes for lots of activity on the bands.

The thing is we need your help to get this schedule fleshed out and we're hoping to put together our biggest effort ever this year. With 3 HF radios running full time for 24 hours

we need all the ops we can. So please drop me note, today if possible, and let me know if you can help. wy9t@... .

But please, if you haven't done field in a long time or want to give it a try for the first time please get back to me.

Also, Tom's group has put a lot of time into checking for noise and the location is quite for radios. If you've never been to the fairgrounds is a great location. It is conveniently close by for all of us.

The fairgrounds are located on the southeast side of Indy and here is a link to a map on Map Quest. Enter the fairgrounds at our private entrance on Fisher Road (there will be a sign pointing to the Field Day site then look for the antennas).

http://mapq.st/jNgQ9d

If you want to stay for the whole event there is free camping available right at the field day site (or you can sleep in your car or truck). Remember there are clean bathrooms on site and the building is lighted.
On Sunday morning breakfast will be provided by the Indianapolis Radio Club (which is one of the many wonderful things they do for hams in central Indiana). Stop by Sunday if you can, have something to eat and meet the guys and gals who help make this whole thing happen

Again, please respond to this email as soon as you can as field day is this Saturday/Sunday.

Thanks for all your help and attention to this matter.

See you this weekend.

73

2827. FS: Elecraft K2 - Loaded

Yahoo group: IndyHamRadio
Date: 2011-07-04 00:16:12 UTC
From: KB9BVN
Topic: 2827 Message: 2827

I would like to sell my K2, gathering funds for a new K3.

Serial #4192 - Built by Don Wilhelm

This is an Elecraft K2 with the KPA100 amp and serial I/O, KSB2 SSB module (does a good job with PSK, RTTY, etc), K160RX 160M Module with 2nd RX antenna jack, K60XV 60m module with transverter interface, KNB2 noise blanker, and KAF2 audio filter.

The radio is a 10 in looks and a 10 in operation. We don't smoke, so there is no worry about it having a tobacco smell.

If you bought this all new and in kit form you'd pay $1479.65 for everything.

I have a converted hand mic, and the extra top panel if you want to convert it back to a QRP only K2, along with all the manuals. (BTW you can download any Elecraft manual from their website if you need one).

I am asking $1250.00 plus shipping.

If you are DX let's talk. I don't have any fears of shipping abroad if you don't have any fears of paying up front.

2834. CW Net Tonight....

Yahoo group: IndyHamRadio
Date: 2011-07-10 18:57:08 UTC
From: KB9BVN
Topic: 2834 Message: 2834

Our Nets Manager is Dan AF4LB. We urge you to work with him to help increase our Nets presence on the bands. Now here's all the usual net info - updated to reflect all changes.

DO NOT REPLY to this email if you're sending info or comments about our NAQCC Nets. Email for that goes to our net manager Dan AF4LB at af4lb@....

Our NAQCC QRS Nets are expanding nicely now. If you would like to start a net in your area, contact Dan and let him know, and you and he can work out the details.

Our latest updated schedule is:

NAQCC QRS Net (NQN - Main net)
Sunday evenings 1900 CDST local time which is Monday 0000Z on
7041 khz.
Main NCS - Dan AF4LB (in VA)

NAQCC East Texas QRS Net (ETN)
Monday evenings 1900 CDST local time, which is Tuesday 0000Z on
7121 kHz
Main NCS - Allen KA5TJS (in TX)

NAQCC East Coast QRS Net (ECN)
Thursday evenings at 2130 EDST local time, which is Friday 0130Z on
7041 kHz.
Main NCS - Dan AF4LB (in VA)

NAQCC Pacific NorthWest QRS Net (PNW)
Thursday evenings 1900 PDST local time which is Friday 0200Z on
3574 kHz.
Main NCS - Stewart KE7LKW (in WA)

Please keep sending any info about nets to Dan at af4lb@.... DO NOT REPLY to this email or it will not reach Dan. Thanks.

For those new to the net, here is a brief description of the informal net procedure.

The call-up is CQ (Net abbreviation) DE (NCS Call) QNI.

After the NCS sends QNI, send your call once. Please be sure to zero beat the NCS. When the NCS acknowledges you, just follow his instructions. All those who check-in will then be given a turn or two to make comments. That's pretty much it. We're NOT a traffic net nor even all that formal. You don't even have to learn the special QN signals, as the only one we use is QNI which basically means check-in. We exist just as a means of some actual

on-the-air slow speed code practice which is different to a certain extent from computer or tape practice.

Since code practice is so important in becoming a proficient QRP operator, this is the ONE and ONLY NAQCC activity where we allow use of QRO if necessary in poor conditions.

If you have any NON-NET info or comments, they go to naqcc33@....
DO NOT send any NET info to this address as it will not get to our Net Manager Dan.

>From Dan AF4LB

2835. crossover from 146.700 to 146.625

Yahoo group: IndyHamRadio
Date: 2011-07-12 16:29:50 UTC
From: kc9brz
Topic: 2835 Message: 2835

july 1st, i was listening to 146.625 and picking up conversations from the 146.700.

plus, maybe another conversation that seemed to be coming in from a "band opening" from another repaeter on the 146.625 freq. i understand what a "band opening" is and how that works. but the fact that something is crossing over from the 146.700 is really weird, i've never heard that before. how could they get cross linked? did someone have 2 rigs going and have the mike keyed on one? was my rig on the fritz? or one of those 2 repeaters?

2836. Fwd: [IndianaD-STAR] Re: Indiana Repeater Council Meeting

Yahoo group: IndyHamRadio
Date: 2011-07-13 10:31:00 UTC
From: Mark Thompson
Topic: 2836 Message: 2836

----- Forwarded Message ----
From: "Stephen M. Parker, WR9A" <wr9aradio@gmail.com>
To: IndianaD-STAR@yahoogroups.com
Sent: Tue, July 12, 2011 4:09:45 PM
Subject: [IndianaD-STAR] Re: Indiana Repeater Council Meeting

Here is the full text of the IRC D-STAR Proposal, as submitted by Charlie, N9MEW, at the Indy Hamfest IRC Meeting on July 9, 2011:

_____

The IRC is proposing to change the way that we coordinate D-STAR systems. Currently we are assigning D-STAR to normal Analog channels. We will be using a plan similar to one of the adjacent states. We have several D-STAR applications pending.

We propose to offset the D-STAR carriers either 5.0 KHz or 6.25 KHz.

At this time, we are encouraging the incumbents to change frequency, but we will not require that. The present D-STAR HOC’s will be notified individually the offset that we propose.

Each analog channel will accommodate Two D-STAR systems. Theoretically two adjacent channels can be accommodated in the same location. This has not been tried yet by another state. A different state has placed them as close as 10 miles. We will not go that close.

For 2 meters, both the 15 KHz channels, and the 20 KHz channels will use plus or minus 5.0 KHz offsets from the analog channel center. The 15 KHz channels make a tight fit, but is workable. We normally require more distance to the adjacent channels for the 15 KHz channels, than we do for the 20 KHz channels.

For 70 cm and other bands that use 25 KHz channels, we will use plus or minus 6.25 KHz. Offsets. This is a good fit.

There are several benefits to use the offsets. First, we can accommodate more D-STAR systems, in that the channels can be shared, and it will minimize interference on the analog channels.

Some Coordination bodies have certain frequencies assigned only for D-STAR use. Indiana does not have any frequencies available over the complete state.

A plus or minus offset will be selected by the coordinator depending on how close the adjacent channel is. This is especially important on the 15 KHz 2 Meter channels.

Normal center channel repeater spacing will be used, for D-STAR, as for Analog channels. We may assign another D-Star system to the other offset channels, depending on adjacent channels and other factors.

A note. D-STAR and Analog cannot share the same channel at the same location. If the channel/location is used for D-STAR, then normal mileage spacing is required to place an analog system on that channel, per the chart that the IRC coordinators use.

As has been previously mentioned on this reflector, it was voted on at the meeting to change all references in that document from "D-STAR" to "Narrow-band digital", in order to accommodate other digital voice modes such as APCO-25. Otherwise, the document passed out at the meeting is as stated above.

I have added my own notes about this topic below:

Here is an EXCELLENT web page with details about D-STAR bandwidth and the results of extensive testing (with laboratory-grade equipment by real RF engineers) in the real-world of D-STAR and analog FM repeaters coexisting:
http://utahvhfs.org/dstar_channel_spacing.html

Here is what I think are very relative paragraphs from that web page:

"The relative "narrowness" of the D-Star signal is oft-touted as one of its strong points. To be sure, more of the total transmitted energy is confined near the center frequency than is the case for the analog signal. For the D-Star signal, the majority of the energy is constrained to within +-3.6 kHz of the center frequency. In the case of the analog signal, the majority of the energy is constrained to within +-5 kHz of the center frequency. This only tells part of the story: If one looks at the -30dB points of the two signals, one notes that the bandwidth of the D-Star and analog signals are +-5 kHz and +-6 kHz, respectively - and it is the energy in these sidebands that, in part, dictates adjacent-channel concerns. If one considers just the -30dB points of the transmit signals, a minimum D-Star to D-Star spacing of 10 kHz and a D-Star to Analog spacing of 11 kHz is suggested.

Perhaps even more important is the detection bandwidth of the receiver. Ideally, the D-Star's receiver's filter need only be wide enough to accommodate the primary "hump" that contains the majority of the energy - that is, out to +-3.6 kHz, or a total bandwidth of about 7.2 kHz, but practical considerations (manufacturing tolerances in the manufacture of the filter, achievable shape factor, group delay, expected transmit or receive frequency errors, etc.) require that the filter be wider than this. As mentioned previously, the -6dB bandwidth of the IF in the IC-91AD is, in fact, 8.6kHz (+-4.3 kHz), dropping to -30dB at 11.2kHz (+-5.6kHz). It is largely the combination of the receiver filtering plus the occupied bandwidth of the adjacent signal that dictates the minimum spacing of two D-Star

signals.

Receivers designed for traditional analog FM use in amateur service
are designed for a signal with a +-5 kHz modulation, so the receivers'
filters are necessarily wider - typically 15 kHz wide at the -6 dB
bandwidth and about 21 kHz wide at the -30 dB bandwidth. For this
reason - plus the fact that the analog signal is wider - it is
necessary that the spacing between an analog signal and either another
analog or even a D-Star signal must be wider than that between two
D-Star signals."

Bottom line quote from that article:
"Based on the above test data as well as frequency and spectral
analysis, the following are recommendations of the Utah VHF Society:
D-Star to D-Star channel spacing: 12.5 kHz minimum
D-Star to Analog channel spacing: 15 kHz minimum"

In addition, here a link to an excellent technical article on the
subject, as well:
http://home.roadrunner.com/~mdmiller7/images/dv/ch_sp/Dstar_Co.pdf

2837. CW Operators Needed

Yahoo group: IndyHamRadio
Date: 2011-07-17 22:23:01 UTC
From: Brian Murrey
Topic: 2837 Message: 2837

This year is the 50th Anniversary of the QRP Amateur Radio Club International. To celebrate the event, the club founder callsign (K6JSS) is being used from all 50 states, each during a different week of the year. Many QRP ARCI club members are working on getting a WAS award from this event.

Indiana will be on the air the week of August 22nd. So I need QRP CW operators that can operate one or two times during that week.

If you can help please let me know a couple or so time slots you can spend on this. Each time slot ought to be at least an hour, and if you want to work a longer slot, that's fine. Just let me know. So far I have W9ILF and myself. Someone else had volunteered a month or so ago and I lost the email. If that's you, let me know.

Once I have 4 or 5 volunteers I will publish the operating schedule on a webpage so we can all see when we're supposed to be on the air. All bands are good, so daytime and night time slots are available. Once you are done with your slot, please email me the contact list so we can get the QSL cards out to the guys.

If you can help keep K6JSS/9 on the air that week, I would be forever in your debt.

2841. Fw: Broadripple Hamfest Saturday Aug 6th.

Yahoo group: IndyHamRadio
Date: 2011-07-30 20:12:57 UTC
From: kc9brz
Topic: 2841 Message: 2841

> From: Ken Bandy, KJ9B <kj9b@...>
> Date: Saturday, July 30, 2011, 10:18 AM

Saturday, August 6, 2011, is the annual Broadripple Hamfest.

The event is being hosted again by Joe and Betty Lobraico on the lot adjacent to their home at 7373 Westfield Blvd, Indianapolis, 46240.

There is no admission fee or any fee for selling items.

This is a "tailgate hamfest" with spots being available on a first come, first served basis.

Typically, set up starts early, around 6 or so. There will be a cookout around 11:00, and probably some coffee and donuts available early.

This is always a great opportunity to swap gear (and/or stories) and meet up with friends you may have spoken with on the radio but never had a "face to face" with. Also, if you have some gear that has been collecting dust in your shack, this is the time to try to sell it, so it can collect dust in someone else's shack!

73,
Ken

2843. High Altitude Balloon Cross band repeater, SSTV, APRS, ATV and more Space Jam 5, Aug 6th 7:30 AM CDT launch

Yahoo group: IndyHamRadio
Date: 2011-08-01 03:41:45 UTC
From: Mark Thompson
Topic: 2843 Message: 2843

-------- Original Message --------
Subject: High Altitude Balloon Cross band repeater, SSTV, APRS,
ATV and more Space Jam 5, Aug 6th 7:30 AM CDT launch
Date: Tue, 26 Jul 2011 12:41:26 -0400
From: Brian Walker <briankaywalker@...>
To:

Good morning!

Sponsored by Scouts in Illinois and Indiana (Scout Troop 17 from Champaign, IL and BSA Venturing Crew 272 from Fountain County, IN), the high-tech Scout “Space Jamboree” (Space Jam) is held annually at the Chanute Air Museum in Rantoul, Illinois.

This year’s Space Jam will be held on the weekend of August 5-7, 2011 and will introduce Scouts (boys and girls) to thirty-plus high-tech merit badges including Radio, Electronics, Computers, Engineering, Aviation, Nuclear Science and more. Amateur Radio will be featured at Space Jam, both as a Merit Badge activity and an interactive activity with ham stations, APRS, a radio equipped high-altitude balloon launch, and a overhead blimp beaming streaming video. Currently Scouts from more than a dozen states are scheduled to participate in Space Jam.

Thanks to Dr. Howard Brooks, KC9BQN (the Paul B. Kissinger Professor of Physics and Astronomy at DePauw University), a high-altitude balloon will be launched. The balloon is expected to reach 105,000 feet, and there are hopes of setting some balloon communications records. SSTV, APRS, telemetry and a cross-band repeater will be onboard. (See frequency notes, below)

In addition, a contact with the International Space Station has been confirmed for Saturday afternoon – more details to follow.

And finally, the Scouts will participate in an Airport Disaster Drill. Five Search and Rescue teams will be using APRS (WB9SA -1 through -5) and 2-meter communications. There will also be a ground-based ATV system and a 15’ blimp carrying a second ATV system.

Needless to say, there will be a lot for Scouts to experience, and the opportunity for Ham Radio operators from the surrounding states to work the Scouts and each other through the balloon. Please let your long distant 2m/440 friends know about the QSO possibilities, and help set a distance record!

Additional information on Space Jam can be found at www.spacejamboree.com.

The organizer of the event is Brian Walker, K9BKW, Advisor to Crew 272, WB9SA is the Crew 272 Club Call. I am one of the merit badge instructors.

Best 73s de K9XT

Balloon frequencies:

· Cross-band repeater: 144.360 MHz up – 446.025 MHz down.

· APRS (W9YJ-11) 144.390 MHz.

· SSTV will be on 144.34 MHz FM.

· Multimode telemetry on 10 meters (28.174 MHz), including CW, DominoEX, and Hellschreiber.

Subject: W9DXCC - register now to save!
To: "Undisclosed recipients" <jim@...>
Date: Tuesday, August 2, 2011, 6:38 AM

This is a reminder to send in your registration for the W9DXCC Convention now so

you can get the discount for registrations received by September 10.
The convention is only a little more than a month off, on September 16-17.
We're looking for an accurate count so we can plan accordingly.

We have a great program, several vendors, QSL checking, lots of nice prizes,
a CW copying contest, a super banquet with ARRL President Kay Craigie,
N3KN, speaking, and two hospitality sites.

The attached flyer has the highlights, and the full information is available at
http://www.w9dxcc.com

We have set up an account with PayPal for your convenience or you may mail your
registration.

A late addition to the program is Jay Terleski, WX0B, of Array Solutions who
will be discussing new products.

The convention is a great opportunity to see your friends and make new ones.

Please pass on the information to your friends and fellow club members.

We are using email instead of snail mail because we would rather spend money on
improving your convention experience.

Jim N7US

For those of you who may not be aware - a new operating opportunity has been created. It is Indiana Parks on the Air. It is similar to IOTA and SOTA in that one can earn points for activating or working a park. There is also an annual one-day contest which will be held on September 10 (in conjunction with the Ohio State Parks on the Air contest). This event was started by a couple of friends of mine and I am simply helping them to get the word out. If you or your local club can activate a park (especially during the September 10 contest) please do so!

For more information you can visit http://inpota.com. Hopefully we'll hear most (if not all) of the 24 Indiana State Parks on the air soon!

Danville, IL repeater is 146.820 MHz, PL 88.5 Hz.

Not sure about repeaters in Champaign/Urbana or Decatur other than what is in the ARRL Repeater Directory.

Indiana Hams,

Please join me in an effort to become more aware and help promote readiness in communities through National Preparedness Month, in conjunction with your local emergency management agency, the Indiana Department of Homeland Security and the Federal Emergency Management Agency.

Preparedness month is each year in September, and means being ready for an emergency or disaster. We in the public safety community are encouraging all Hoosiers, and especially Hams, to initiate readiness, take a few additional steps, evaluate their readiness and/or encourage others to prepare as well.

To sign up, go to http://community.fema.gov/connect.ti/READYNPM

2857. repeaters in Illinois.

Yahoo group: IndyHamRadio
Date: 2011-08-15 01:33:42 UTC
From: kc9brz
Topic: 2857 Message: 2857

I've found that this database is reasonably accurate, at least
for the central Indiana area:

http://www.artscipub.com/repeaters/

It's drawback is it doesn't tell you which ones are the most
frequently used. I can usually hit about 20 2-meter
repeaters from my normal operating locations in Indianapolis,
but the only one with any noticeable non-net use is the
146.700.

I have use of a 440 rig at one of my operating locations, and
it seems to me that the local Indy area 440 repeaters get more
use, or at least more of them are used. Some of the old-timers
I used to hear on 2-meter seemed to have moved to 440.

In a way, the dearth of 2-meter usage is good and bad.
Bad, as in, if something isn't used, it will go away.
Good, as in, there will (or should) be plenty of "capacity"
if there's an area emergency, and we _need_ to use repeaters for
actual important stuff.

The Artsci database is full of out-of-date and incorrect listings. I found five non-existent or incorrectly listed repeaters in one Central Indiana county alone.

The Indiana Repeater Council posts the Indiana repeater directory to only 2 places.

The IRC web site http://www.ircinc.org/DirByRegByCity.html and a copy is given to the ARRL for the ARRL repeater directory.

Charlie W9MEW works real hard to keep the web site listing as accurate as possible and the ARRL is updated once per year.

This is the third year the club has had the "Tailgate swap-meet".
Admission is $3.00 for venders and buyers.
From the south [Indy] North on 65 to I 94 West to Exit 40A,merge onto US20 E /US 35 South 3.2 miles to Schultz rd. This is an old ATT microwave tower site that is now owned by a ham [W9DWS] who lets the 3 area clubs have activities there.
The coordinator is Matt Lasayko KC9KUD phone 219-916-4907
GPS co-ordinance: -86.7657854 41.6571458

From the south you can also exit I 65 at N.Lafayette on Rt. 43 North
to 421. It is a strait road from 65 to I 94 just south of Michigan City. The old tower at the site is concrete 180 ft. tall with lots of antennas on top. Can't miss it. You can see it for miles depending on where you are. Call in on 146.775- [131.8] and 146.250
There is a map on the ARRL website / hamfests/ Indiana and it is the first one on the Indiana list.
Hope to see some of you there.

2867. ARRL VHF QSO Party, 1800 UTC Saturday, 9/10 - 0300 UTC Monday, 9/11

Yahoo group: IndyHamRadio
Date: 2011-09-05 19:09:00 UTC
From: Mark Thompson
Topic: 2867 Message: 2867
Attachments: 1 described; binary payloads are missing from this source WARC

http://www.arrl.org/september-vhf-qso-party

Full Contest Details
1. Object: To work as many amateur stations in as many different 2 degrees X 1 degree grid squares as possible using authorized frequencies above 50 MHz. Foreign stations work W/VE amateurs only.
2. Date and Contest Period: The second full weekend of September. Begins1800 UTC Saturday and ends 0300 UTC Monday (September 10-12, 2011).
3. Entry Categories:
3.1. Single Operator.
3.1.1. Low Power
3.1.2. High Power
3.2. Single Operator Portable.
3.3. Rover. A rover is comprised of no more than two operators that moves among two or more grid squares during the course of a contest. An operator may perform any or all rover functions, but a driver's function shall be limited to driving the vehicle. Drivers may be switched out during the event. Any number of observers is also allowed, however observers may not perform any rover function at any time. Rover vehicles with only one occupant are allowed to perform all functions listed above.
3.3.1. A rover vehicle may transport only one station using a single call sign. An exception is provided for in "General Rules for All ARRL Contests" number 3.5 (Family Rule).
3.3.2. A rover may not operate with more than one call sign.
3.3.3. Rover vehicles must transport all the equipment, power supplies, and antennas used at each operating site.
3.3.4. Rovers MUST sign "rover" on Phone and /R on CW and digital modes after their call sign.
3.3.5. All Rovers are encouraged to adopt operating practices that allow as many stations as possible to contact them.
3.3.6. Rover operators may submit separate logs for single operator (fixed station) in addition to their rover entries. Rovers submitting a score for inclusion in a club competition must also include a secondary summary sheet indicating the portion of the score that counts for the club score if any of the QSOs submitted take place outside of their club's territory.
3.3.7. Rovers are permitted to use APRS. Rovers using APRS transmit only their call sign and position. Any multi-op station may access rover APRS data directly or via the Internet.
3.3.8. A rover may not make more than 100 QSOs with any other one rover.
3.4. Limited Rover. Same as the “Rover” class above, but operation is permitted only on the 6 Meter, 2 Meter, 220 MHz and 432 MHz bands. Output power limits shall be the same as those defined for the Single Operator Low Power category.
3.5 Unlimited Rover. Same as “Rover” class above, but Unlimited Rovers may use more than two operators and are exempt from rules 3.3.3 and 3.3.8.
3.5.1. Unlimited Rover scores may NOT be applied to a club score for Club Competition.

Please see “General Rules For All ARRL Contests Above 30 MHz” for more information on the Rover categories.
3.6. Multioperator:
3.6.1. Multioperator (Unlimited): Stations submit logs with more than four bands used.
3.6.2. Limited Multioperator: Stations submit logs with a maximum of four bands used. (Logs from additional bands used, if any, should be included as checklogs.)
4. Exchange: Grid-square locator (see April 1994 QST, p 86).
4.1. Exchange of grid square is required. Exchange of signal report is optional.
5. Scoring:
5.1. QSO points:
5.1.1. Count one point for each complete 50- or 144-MHz QSO.
5.1.2. Count two points for each 222- or 432-MHz QSO.
5.1.3. Count three points for each 902- or 1296-MHz QSO.
5.1.4. Count four points for each 2.3-GHz (or higher) QSO.
5.2. Multiplier: The total number of different grid squares worked per band. Each 2 degrees X 1 degree grid square counts as one multiplier on each band it is worked.
5.3. Final score: Multiply the total number of QSO points from all bands operated by the total number of multipliers for final score.
5.4. Rovers only: The final score consists of the total number of QSO points from all bands times the sum of unique multipliers (grid squares) worked per band (regardless of which grid square they were made in) plus one additional multiplier for every grid square activated (made a contact from).
5.4.1. Rovers are listed in the contest score listings under the Division from which the most QSOs were made.
5.4.2. Rovers who submit scores for the club competition must submit a separate summary sheet and log indicating QSOs and score if they make any contacts from outside of the club territory. The summary sheet should be clearly marked “for club competition only” and must be emailed separately to contests@...
6. Miscellaneous:
6.1. Stations may be worked for credit only once per band from any given grid square, regardless of mode. This does not prohibit working a station from more than one grid square with the same call sign (such as a Rover).
6.2. Only one signal per band (6, 2, 1 1/4, etc) at any given time is permitted, regardless of mode.
6.3. Multioperator stations may not include QSOs with their own operators except on frequencies higher than 2.3 GHz. Even then, a complete, different station (transmitter, receiver and antenna) must exist for each QSO made under these conditions.
7. Awards:
7.1. Certificates will be awarded in the following categories.
7.1.1. Top Single Operator High and Single Operator Low power in each ARRL/RAC Section.
7.1.2. Top Single Operator High and Single Operator Low power on each band (50, 144, 222, 432, 902, 1296 and 2304-and-up categories) in each ARRL/RAC Section where significant effort or competition is evident. (Note: Since the highest score per band will be the award winner for that band, an entrant may win a certificate with additional single-band endorsements.) For example, if KA1RWY has the highest single-operator low-power all-band score in the CT Section and her 50- and 222-MHz scores are higher than any other CT single operator’s, she will earn a certificate for being the single-operator Section leader and endorsements for 50 and 222 MHz.
7.1.3. Top Single Operator Portable in each ARRL/RAC Section where significant effort or competition is evident. (Single Operator Portable entries are not eligible for single-band awards.)

7.1.4. Top rover in each ARRL Division and Canada where significant effort or competition is evident. (Rover entries are not eligible for single-band awards.)
7.1.5. Top multi-operator score in each ARRL/RAC Section where significant effort or competition is evident. (Multioperator entries are not eligible for single-band awards.) Top limited multi-operator in each ARRL/RAC Section where significant effort or competition is evident. (Limited multi-operator entries are not eligible for single-band awards.)
7.1.6. Top scoring club in each club competition category will be awarded a gavel. See “General Rules for all ARRL Contests” for club competition information.
8. Submission:
8.1. All submissions must be emailed to SeptemberVHF@... or postmarked no later than 0300z Wednesday, October 12, 2011. Paper logs should be mailed to Sept VHF QSO Party, ARRL Contest Branch, 225 Main St, Newington, CT 06111. Logs mailed or emailed after the submission deadline may be designated as check logs.
8.2. Stations that use computers to log must send the electronic log in the Cabrillo file format for entry into the results. Submitted electronic files must be in ASCII / text readable format. A paper printout of an electronically created log is not an acceptable substitute for the required log file.
8.3. Electronically submitted entries are considered signed.
8.4. Logs may be submitted via the special web applet at www.b4h.net/cabforms
8.5. All paper entries must include a fully completed summary sheet and a complete log of the contacts made.
9. Other:
9.1. See “General Rules for All ARRL Contests” and “General Rules for ARRL Contests on bands above 50 MHz (VHF)” November 2001 QST or at the Contest Branch Website at: http://www.arrl.org/contests
9.1.1 For queries contact contests@... or (860) 594-0295.

2871. 2m Fall Sprint, Monday, 9/19, 7 - 11 pm (Local Time)

Yahoo group: IndyHamRadio
Date: 2011-09-16 17:21:23 UTC
From: Mark Thompson
Topic: 2871 Message: 2871
Attachments: 1 described; binary payloads are missing from this source WARC

Fall Sprints Announced

July 27, 2011Bruce Randall, WD4JQV, the 2011 Fall Sprint Chairman, announced the schedule and the rules for this year's Sprints.

Changes this year include 6-digit grid squares and distance scoring on microwaves. This year's schedule is as follows:

144 MHz 7 pm to 11 pm local Mon, Sep 19
222 MHz 7 pm to 11 pm local Tue, Sep 27
432 MHz 7 pm to 11 pm local Wed, Oct 5
Microwaves 7 am to 1 pm local Sat, Oct 22
50 MHz 2300 to 0300 UTC Sat, Oct 29 - Sun, Oct 30

Introducing the 2011 Fall VHF/UHF Sprints:

The Southeastern VHF Society is again sponsoring the Fall VHF/UHF Sprints. All amateurs are encouraged to participate, even if only in a small way. They are meant to get everyone on the air. The rules encourage rover, microwave operation and the casual operator new to VHF/UHF.

This year we are using 6 digit grid squares and distance scoring on the Microwaves.

The contest is intended for single operator, single transmitter entries. However, if one wishes to introduce a newcomer to weak signal vhf/uhf operations, the sponsors of the contest reserve the right to allow such entries, if identified as such.
In no case will there be more than 1 radio operator at one time. A second person can not serve as a
“spotter” while the first operates. Operating categories are still Single Op and Rover.
Sprints are held on different days for each band except for the Microwaves (902 and up) that are
held together. The operating time for each Sprint is short (like a sprint :-) and meant to compress
the activity into a shorter time span.

At present we do not have any plaque sponsors. If you would like to sponsor a plaque for one of the
Sprints please contact the Fall Sprints Chairman Bruce Randall WD4JQV. WD4JQV@....
While the rules for the Fall Sprints are set for 2011, we are always open to suggestions on how to
improve them for the future. If you have an idea on how to make the Fall Sprints better for next
year (different dates, times, rule change, etc.) please drop the Fall Sprints Chairman a note and help

out.

Please notice that, except for rovers and the microwave sprint, the scoring is more like the
ARRL June VHF contest now.

Rover scoring is intended to encourage activation of many grids!www.svhfs.org

73, have fun, and good luck!

Bruce Randall WD4JQV
fallsprints@...
2011 Fall Sprint Chairman

Down East Microwave (downeastmicrowave.com) is again supporting the Fall Sprints by sponsoring two participation award drawings. The drawings will be made at the SVHFS Conference from the stations that turn in logs showing contacts in the 222 MHz Sprint and/or the
Microwave Sprint. One drawing for each. The two drawing winners will receive $100 gift certificates for DEMI products. You do not have to be present to win. The awards are being sponsored to encourage amateurs to get active on 222 MHz and the Microwave bands. Our thanks
to Steve and Sandra for their continued support!!

For details and up-to-date information about the Fall Sprints and the annual technical conference
the Southeastern VHF Society sponsors, please visit our website at This will allow computer programs to both generate the logs andcheck the logs.

2872. Ham Camp Weekend, 10/14/2011, 4:00 pm

Ham Camp Weekend
Friday October 14, 2011
4:00 pm - 4:00 am
(The next reminder for this event will be sent in 7 days, 4 minutes.)
Location: American Legion Park - Fortville Indiana
Street: American Legion Park
City State Zip: Fortville Indiana

Notes:
2nd Annual Ham Camp - Sponsored by Rick Garret N9GSU, and Holly Smith KC9SPT - This event starts Friday Evening, and ends Sunday morning. Pitch In dinner on Saturday night. We'll be camping at the American Legion Park and Campground in Fortville, Indiana, on State Road 13, 3 miles south of I-69. If you're tent camping, there is NO CHARGE for camping! (Thank you, American Legion, for making this happen!!) If you're RV camping and want electricity, it's a VERY reasonable $10.00/night. For the Pitch In, we've reserved the park shelter. We'll be having a 50/50 drawing to help cover the cost of the shelter, and...perhaps, even a door proze or two. If anyone is interested in donating a door prize, please let one of us know!

If you've got questions, feel free to email me (IndyRick@...) or Holly (Hollyjae@...) I'll also be making a facebook event page for this, for any of you who are on Facebook.

2875. October 22nd Ham Radio Dinner

Yahoo group: IndyHamRadio
Date: 2011-10-05 01:36:12 UTC
From: Rhonda
Topic: 2875 Message: 2875

Greetings, The Ham Radio Dinner for October will be the 22nd at 7pm at Italian Gardens, 8336 E Washington St, Indianapolis. All amature radio operators and their families are invited to join us. We get together once a month to do the two things that most hams love to do: talk and eat:) We always choose family restaurants so if you have children, feel free to bring them along. We hope to see you all there!

73,

Rhonda

Subject: Illinois QSO Party

The Illinois QSO Party is this weekend, Sunday, 10/16 and I can't think of too many better ways to brush up on your operating technique than to get on and make some contacts. The ILQP starts at 12:00 noon local time and runs until 8:00 M local time.

More information can be found at http://www.w9awe.org/ILQP2011.html

I would like to encourage all ARES stations to get on from their local Red Cross or EMA and exercise the
equipment, operators and operating procedures. You may want to operate Field Day style as well and if so, you might look at operating from a county line or multi-county corner, that would make you very popular in the ILQP. Since counties are multipliers in this event, it will give you a good idea of how well you may or may not be able to communicate with various counties in the event of an emergency. As a part of the organizing team and cheerleader for the ILQP, I would really like to see all 102 counties activated, but we would need many more counties active than are currently scheduled. The southern third of the state is pretty sparse when it comes to ham activity, so if you live south of I-70, you will be pretty rare and sought after this Sunday.

If you are planning on being on, please drop me an email so I can add you to the activity map.

I know some of you are not contesters and avoid contesting like the plague, but it has many benefits for those that do take part, so think of it as a "live fire" training exercise.

Thanks for your time and I hope to work you this weekend.

Danny Pease NG9R
ARES EC Adams County

2886. RE: Hamsexy.com web site.

Yahoo group: IndyHamRadio
Date: 2011-10-13 20:11:52 UTC
From: kc9brz
Topic: 2886 Message: 2886

Del,

Hamsexy.com is supposed to be pathetic. Or rather, it documents pathetic-ness on the part of a small minority
of goober hams (and ham wannabes) who give Ham Radio a bad name, such as pirates, people who interfere
with police/fire/military communication, cars (usually P.o.S) with 20 ham-radio antennas on them, "Ham Badges",
"'Official' ARES cars", etc.

Or maybe you mean that HamSexy.com is pathetic in its attempts to make fun of that small minority of goof-ball hams?

Ya know, that mag-mount trucker CB-antenna (love that cool-looking big air coil in the middle) that I cut
down and was using for 10-meter didn't look so bad on the trunk lid of my Toyota Camry, but putting it
on the center of the roof (in order to get a better radiation pattern) did look kind of dorky.
(So I only put it in the center when operating stationary in a private parking lot.)

But darn, it just don't look right at all, nowhere, no how, on my tiny Caddy CTS. Hence, I need to send a pic
of it in to HamSexy.com. Somehow, a Caddy, any size Caddy, just looks so "HamSexy", so "Bubba",
with a huge CB antenna on it. (And I bet it would be well-received at the Hillbilly Yacht Club.)

On a serious note, I do like that HTX-10 and catching a long distance FM QSO, or decoding some CW beacons. I still have on the back-back burner a project to make a key-interface for it,
so I can do CW through the mike jack.

Would mobile CW on a ham band be against Indiana law now, "texting and driving" ?

From: kc9brz
Topic: 2887 Message: 2887

Whatch-yall think, is CW-ing and driving the same as "texting and driving"?

Does anyone have a copy of the wording of the recent Indiana law about texting and driving?

I've seen pics (I think) of touch-sensitive (capacitance?) key pads mounted on a steering wheel, and I suppose someone could have a thigh-mounted paddle. How would those be viewed under this new law?

Hi! I'm David Spoelstra, N9KT. I'm your ARRL Indiana State Government Liaison. This year's legislative session started with six "texting" type bills that might have affected our use of Amateur Radio in moving vehicles. With the assistance of the rest of the Indiana ARRL staff calling and writing State representatives, I was able to get Amateur Radio exceptions written into all six bills.

One of the six bills passed - HB1129. In it, it specifically states:

IC 9-13-2-177.3
Telecommunications device
     Sec. 177.3. (a) "Telecommunications device", for purposes of IC 9-21-8 and IC 9-24-11-3.3, means an electronic or digital telecommunications device. The term includes a:
        (1) wireless telephone;
        (2) personal digital assistant;
        (3) pager; or
        (4) text messaging device.
    (b) The term does not include:
        (1) amateur radio equipment that is being operated by a person licensed as an amateur radio operator by the Federal Communications Commission under 47 CFR Part 97; or
        (2) a communications system installed in a commercial motor

---

So, if you are using "amateur radio equipment that is being operated by a person licensed as an amateur radio operator by the Federal Communications Commission under 47 CFR Part 97" then you are exempted and are not considered to be "texting and driving" and this bill does not affect you.

Please support the ARRL and the work its members and staff do to protect Amateur Radio by becoming a member!

Thanks!
-David, N9KT
ARRL Indiana State Government Liaison

2891. Postal Service says stamp prices are going up on January 1

Yahoo group: IndyHamRadio
Date: 2011-10-20 14:19:07 UTC
From: W9FG
Topic: 2891 Message: 2891

Time to buy those "Forever" (and other) stamps!

From the Washington Post: and Washingtonpost.com

Dick W9FG

Postal Service says stamp prices are going up

By Ed O?Keefe, Published: October 18

Nothing lasts forever.

Stamp prices will climb 1 cent starting in January, the U.S. Postal Service said Tuesday.

The cost of a first-class stamp ? also known as a forever stamp ? will rise to 45 cents on Jan. 22, the first price increase in more than 2-1/2 years, the USPS said. The cost of sending magazines, standard mail and some package services also will rise, but prices for Express Mail and Priority Mail will stay the same.

The 1-cent increase is expected to generate an additional $888 million in revenue, postal officials said Tuesday.

The jump ?is small and is needed to help address our current financial crisis,? Postmaster General Patrick R. Donahoe said in a statement, adding that although the USPS continues to ?aggressively cut costs,? it needs Congress to pass postal reform legislation that he said would make it easier to save money.

Starting Jan. 22, the USPS said rates will be:

- First-class letters (1 ounce): 1-cent increase to 45 cents.

- Letters weighing additional ounces: unchanged at 20 cents.

- Postcards: 3-cent increase to 32 cents.

- Letters to Canada and Mexico (1 ounce): 5-cent increase to 85 cents.

- Letters to other international destinations: 7-cent increase to $1.05.

The Postal Service says it has lost about $10 billion in the fiscal year that ended last month. It is pushing Congress to enact a series of reforms that would permit it to end Saturday mail deliveries, close post offices and mail processing facilities, and raise postage rates beyond the rate of inflation.

The price increases announced Tuesday, and formally filed with the Postal Regulatory Commission, are capped by law at 2.1 percent, the rate of inflation based on the consumer price index.

2892. FS: Elecraft K1 - Four CW Bands

Yahoo group: IndyHamRadio

From: KB9BVN
Topic: 2892 Message: 2892

I have a four bander, with 17, 20, 30, and 40m in it. Also has the noise blanker, tilt stand, and automatic antenna tuner. Makes about 7 watts with a 13.8 VDC supply, about 6 watts with a 12v battery.

Serial number is 2845, and I have the manual...although Elecraft has them all for free online. Non Smoker, excellent condition.

List on everything is about $610.00

I am asking for $500 plus shipping.

From: KB9BVN
Topic: 2894 Message: 2894

I have a used Tektronix 465 oscilloscope for sale. It works, it's old, and comes with a couple of probes.

No manual but you can get them off several websites.

Asking $75.00 - you come and get it.

I have a couple of scope tutorials I can put on a CD and give to you as well.

73 de KB9BVN
Brian Murrey

Let me know if you are interested. I am not shipping this thing.

2895. 6m Fall Sprint, Saturday, 2300 UTC - Sunday, October 30, 0300 UTC

Date: 2011-10-27 18:40:39 UTC
From: Mark Thompson
Topic: 2895 Message: 2895

July 27, 2011

The Southeastern VHF Society is again sponsoring the Fall VHF/UHF Sprints. All amateurs are encouraged to participate, even if only in a small way. They are meant to get everyone on the air. The rules encourage rover, microwave operation and the casual operator new to VHF/UHF.

This year we are using 6 digit grid squares and distance scoring on the Microwaves.

The contest is intended for single operator, single transmitter entries. However, if one wishes to introduce a newcomer to weak signal vhf/uhf operations, the sponsors of the contest reserve the right to allow such entries, if identified as such.
In no case will there be more than 1 radio operator at one time. A second person can not serve as a
“spotter” while the first operates. Operating categories are still Single Op and Rover.
Sprints are held on different days for each band except for the Microwaves (902 and up) that are
held together. The operating time for each Sprint is short (like a sprint :-) and meant to compress
the activity into a shorter time span.

At present we do not have any plaque sponsors. If you would like to sponsor a plaque for one of the
Sprints please contact the Fall Sprints Chairman Bruce Randall WD4JQV. WD4JQV@....
While the rules for the Fall Sprints are set for 2011, we are always open to suggestions on how to
improve them for the future. If you have an idea on how to make the Fall Sprints better for next
year (different dates, times, rule change, etc.) please drop the Fall Sprints Chairman a note and help
out.

Please notice that, except for rovers and the microwave sprint, the scoring is more like the
ARRL June VHF contest now.

Rover scoring is intended to encourage activation of many grids!www.svhfs.org

73, have fun, and good luck!

Bruce Randall WD4JQV
fallsprints@...
2011 Fall Sprint Chairman

Down East Microwave (downeastmicrowave.com) is again supporting the Fall Sprints by sponsoring two participation award drawings. The drawings will be made at the SVHFS Conference from the stations that turn in logs showing contacts in the 222 MHz Sprint and/or the
Microwave Sprint. One drawing for each. The two drawing winners will receive $100 gift certificates for DEMI products. You do not have to be present to win. The awards are being sponsored to encourage amateurs to get active on 222 MHz and the Microwave bands. Our thanks
to Steve and Sandra for their continued support!!

For details and up-to-date information about the Fall Sprints and the annual technical conference
the Southeastern VHF Society sponsors, please visit our website at This will allow computer programs to both generate the logs andcheck the logs.

Bruce Randall, WD4JQV, the 2011 Fall Sprint Chairman, announced the schedule and the rules for this year's Sprints.

Changes this year include 6-digit grid squares and distance scoring on microwaves. This year's schedule is as follows:

144 MHz 7 pm to 11 pm local Mon, Sep 19
222 MHz 7 pm to 11 pm local Tue, Sep 27
432 MHz 7 pm to 11 pm local Wed, Oct 5
Microwaves 7 am to 1 pm local Sat, Oct 22
50 MHz 2300 to 0300 UTC Sat, Oct 29 - Sun, Oct 30

Introducing the 2011 Fall VHF/UHF Sprints:

2897. October Dinner reminder

Yahoo group: IndyHamRadio
Date: 2011-10-22 19:28:13 UTC
From: Rhonda
Topic: 2897 Message: 2897

Greetings,

The Ham Radio Dinner for October will be the 22nd at 7pm at Italian Gardens, 8336 E Washington St, Indianapolis. All amature radio operators and their families are invited to join us. We get together once a month to do the two things that most hams love to do: talk and eat:) We always choose family restaurants so if you have children, feel free to bring them along. We hope to
see you all there!

73,

Rhonda

2898. D-STAR Forum at Fort Wayne Hamfest, Saturday, 11/19, Noon - 1:15 pm

Yahoo group: IndyHamRadio
Date: 2011-11-02 16:06:36 UTC
From: Mark Thompson
Topic: 2898 Message: 2898
Attachments: 3 described; binary payloads are missing from this source WARC

A D-STAR forum will be held at the Fort Wayne Hamfest on Saturday, 11/19 from Noon - 1:15 pm.

This will be a great opportunity for those new to D-STAR to learn more about D-STAR AND those already using D-STAR to meet each other.

For those new to D-STAR we'll start the forum by playing the VHF/UHF Digital Voice video by ARVN (Amateur Radio Video News).

There are now SEVEN D-STAR repeaters on the air in Indiana.

As you may have heard, the two clubs in Fort Wayne have joined together to take advantage of Icom's repeater offer and
have recently put a 70cm D-STAR repeater on the air.

We would like to demonstrate the new D-STAR repeater in Fort Wayne at the forum.
If anyone has a 70cm D-STAR mobile rig, power supply & antenna
they could bring to the forum for a demo please let me know.

If you own a DV Dongle or DVAP or D-STAR Hotspot and have a computer with a wireless data connection
let me know if you could bring them & demonstrate them as well.

We would also like to hear about D-STAR activity in your area at the forum.

Experienced D-STAR users will be present to answer any questions you might have about D-STAR.

Please let other D-STAR users and members of your club know about the forum.

Look forward to seeing you at the forum and talking with you on D-STAR.

Icom America will also have a booth at the hamfest this year.

The Fort Wayne D-STAR repeater is on 442.99375 MHz and the simplex frequency at the hamfest will be 145.67 MHz.

REF024B is the official D-STAR Reflector for the Indiana.
You can use the reflector to connect repeaters together for nets and public service & EmComm events.
It is anticpated that a regular state-wide D-STAR net will be starting in the near future using REF024B.

In the meantime, you can learn more about D-STAR in Indiana by joining the Indiana D-STAR group at:
http://groups.yahoo.com/group/IndianaD-STAR/

2900. November Dinner 11/12/11

Yahoo group: IndyHamRadio
Date: 2011-11-03 22:56:30 UTC
From: Rhonda
Topic: 2900 Message: 2900

Greetings Everyone!

I hope that everyone is having a good November so far.

I know that we said that there would not be a November dinner due to a conflict but plans have changed and we can have a dinner after all.

This month will be a little different. First, our normal dinners are at 7:00pm but because of a scheduling issue with the restaurant that we selected, we need to go at 5:30pm instead.

We are going to The Fort Grille, 901 E. Broadway St., Fortville, IN 46040 on Saturday, November 12th.

This is a small restaurant so we are asking that if you think you can make it, please let me know. We would like to get a count of how many of us will be there.

If you want to check out their menu, go to www.fortgrille.com. They have a decent selection and when we were there during ham camp, the food was really good.

We look forward to seeing you all!

From: Rhonda
Topic: 2908 Message: 2908

Greetings!

Our December dinner will be held 12/17/11 at 7pm at Jonathan Byrd's, 100 Byrd Way, Greenwood, IN. If you have never been to JB's, it is cafeteria-style and has many choices available. We would love to see you all there is you can make it.

Everyone is welcome so please feel free to bring your other half whether or not he or she is a ham. We have several who join us that are not licensed and we talk about a little bit of everything rather that just ham radio so they feel like part of the group.

Merry Christmas to everyone!

Steve & Rhonda

2909. Upcoming CW Nets - Slow Speed from the NAQCC

Yahoo group: IndyHamRadio
Date: 2011-12-04 21:08:01 UTC
From: KB9BVN
Topic: 2909 Message: 2909

Thanks for your kind comments about these net, sprint, and newsletter email announcements. There are too many to thank individually so we are thanking you this way. We're glad these emails are helpful reminders of our club activities.

Info and/or comments about our nets go to our net manager Dan AF4LB at af4lb@.... DO NOT just reply to this message or it won't reach Dan.

If you would like to start a net in your area, contact Dan and let him know, and you and he can work out the details.

Our latest updated schedule is:

NAQCC Main QRS Net (NQN)
Sunday evenings 8 PM local time (ED/ST) which is Monday 0100Z on 7041 kHz (3560 in cold weather months).
Main NCS - Dan AF4LB (in VA)

NAQCC East Texas QRS Net (ETN)
Monday evenings 7 PM local time (CD/ST), which is Tuesday 0100Z on 7121 kHz, then 3562 at 0130Z
Main NCS - Allen KA5TJS (in TX)

NAQCC Rocky Mtn Regional/Continental QRS net (RMR)
Tuesday afternoons 2 PM local time (MD/ST), which is Tuesday 2100Z on 14062.5 kHz.
AND
Thursday afternoons 2 PM local time (MD/ST), which is Thursday 2100Z on 14062.5 kHz.
Main NCS - Dale WC7S (in WY)

NAQCC East Coast QRS Net (ECN)
Thursday evenings at 8 PM local time (ED/ST), which is Friday 0100Z on 7041 kHz (3560 in cold weather months).
Main NCS - Dan AF4LB (in VA)

NAQCC Pacific NorthWest QRS Net (PNW)
Thursday evenings 7 PM local time (PD/ST) which is Friday 0300Z on 3574 kHz.
Main NCS - Stewart KE7LKW (in WA)

Here is a brief description of the informal net procedure.

The call-up is CQ (Net abbreviation) DE (NCS Call) QNI.

After the NCS sends QNI, send your call once. Please be sure to zero beat the NCS. When the NCS acknowledges you, just follow his instructions. All those who check-in will then be given a turn or two to make comments. That's pretty much it. We're NOT a traffic net nor even all that formal. You don't

even have to learn the special QN signals, as the only one we use is QNI which basically means check-in. We exist just as a means of some actual on-the-air slow speed code practice which is different to a certain extent from computer or tape practice.

Since code practice is so important in becoming a proficient QRP operator, this is the ONE and ONLY NAQCC activity where we allow use of QRO if necessary in poor conditions.

Any NON-NET info or comments go to naqcc33@.... Again any net info must be sent to Dan at the email address near the top of this message.

>From Dan AF4LB

Packet Workshop in Lafayette, FEB 18
Posted by: "Stephen Parker" radiowr9a@... commsec
Mon Dec 5, 2011 5:37 pm (PST) A packet training workshop will be held in Lafayette on Saturday, FEB
18, 9:00 a.m. - 12:00 p.m., sponsored by Tippecanoe County ARES. The workshop is open to all.

Registration is required. There is no cost, but we must be expecting you. Register soon, as space is limited.

This training session will be devoted almost entirely to setting up and using the Outpost Packet Message Manager. We strongly recommend that you have Outpost installed on your computer and communicating with your TNC prior to the workshop. This will be a hands-on workshop where we will learn to configure the Outpost Packet Message Manager for our current packet environment. We will demonstrate how to use Outpost to send and receive messages for various ARES operations, and practice passing packet messages through the BBS we will have at the workshop.

For more information and to register, visit:
www.w9tca.com/ packet-workshop

2912. Info on Ted Arnold K9TOA?

Yahoo group: IndyHamRadio
Date: 2011-12-09 12:27:23 UTC
From: Ken Bandy, KJ9B
Topic: 2912 Message: 2912

I received this message from a fellow looking for info on Ted Arnold in Jeffersonville. I'm not familiar with him, but thought maybe someone here might be. I'm sure any info would be appreciated.

73,
Ken, KJ9B

Hi Ken;
Could you tell me if you know Ted O Arnold-k9toa in Jeffersonville ? I can't bring his vintage microphone site up, and it has been several months or more. He builds,repairs,refurbishes , and sells vintage classic microphones. It is or was a great source for those microphones.

Thanks---73
Matt

2915. Ham Radio in Hollywood: Comedian Tim Allen Stars as Radio Amateur on New TV Show

Yahoo group: IndyHamRadio
Date: 2011-12-15 19:22:18 UTC
From: Mark Thompson
Topic: 2915 Message: 2915

http://www.arrl.org/news/em-ham-radio-in-hollywood-em-comedian-tim-allen-stars-as-radio-amateur-on-new-tv-show
Ham Radio in Hollywood: Comedian Tim Allen Stars as Radio Amateur on New TV Show 12/12/2011

Tim Allen -- star of Home Improvement, Toy Story, The Santa Clause and Galaxy Quest, just to name a few -- stars in Last Man Standing, an ABC comedy airing at 8 PM (EST) on Tuesday nights. Allen plays Mike
Baxter, KA0XTT, a married father of three and the director of marketing at an outdoor sporting goods store in Colorado whose life is dominated by women. While Amateur Radio has not been prominently featured in the first episodes, according to John Amodeo, NN6JA -- the producer of Last Man Standing -- it is a part of the show and an important part of Mike's character.
The episode that will establish Mike as a radio amateur is currently scheduled to air in mid-January.

"Tim's character Mike is involved in creating the sales strategy for the store, including their catalog and Internet identity," Amodeo told the ARRL. "The store is like Bass Pro Shops or Cabelas. There is a strong self-sufficiency overtone to Mike's approach to life. Ham radio fits in the story as a means of emergency communication. It's not directly featured in the foreground story, but at the moment, it's a background element on the home set. Once I allow something to be put on the set, there's a chance the writers will feature it. Now that we have actually established Mike Baxter as KA0XTT, we can do more things featuring Amateur Radio."

To make Mike a ham, Amodeo needed Mike to have a call sign. So he contacted ARRL Media and Public Relations Manager Allen Pitts, W1AGP, to help him out. "In film and TV, we create fictitious telephone numbers, addresses and brands," Amodeo explained. "We do this mostly to avoid being sued by real brands and to avoid complications with advertisers. As a producer and a ham, I was torn between wanting the show to be accurate and needing to keep my studios out of trouble. An accurate and positive portrayal of ham radio on TV would be a good thing." Many TV shows and movies use telephone numbers with a 555 exchange (such as 555-1212), as that exchange is not valid.

Together with Pitts, and with input from Tim Allen, Amodeo created a call sign for Mike Baxter: KA0XTT. Since the show is set in Colorado, they wanted Mike to have a call sign with a 0 in it. "We wanted a call sign that sounded real, but was not valid," Amodeo said. "The call sign is a 2×3 format with an X suffix. A call sign in this format is an experimental call sign and is not assignable to a radio amateur except in special circumstances. We especially liked the suffix, as it is a play on Tim's character from his former show, Home Improvement: 'ex-Tim Taylor.'"

Amodeo told the ARRL that both his studio (Fox) and ABC were "delighted to have a useable call sign. In the past, TV shows just made up some crazy call or used someone else's without permission. And because we've had so much talk about Amateur Radio here on the show, a few of my production assistants took their Technician exam." Amodeo applied to be an ARRL Volunteer Examiner so he could help administer the exams. On October 6, Amodeo and two other ARRL VEs administered the Technician exam to seven prospective hams. All seven passed, with two making perfect scores.

Since Mike Baxter is a ham, he needed a shack. So Amodeo and the set designers installed an Amateur Radio station in the corner of Mike's set office. Allen, as Baxter, uses an ICOM IC-9100 HF/6 meter/2 meter transceiver and an IC-92AD handheld transceiver, both provided to the show courtesy of ICOM America. Amodeo told the ARRL that he has plans to add vintage equipment to the shack in the future. "The radio equipment was originally intended to be used as props and set dressing items," Amodeo told the ARRL. "But since eight of the show's staff members are radio amateurs, it didn't take long before we made the radio equipment 'practical,' which is to say, actually capable of making radio calls live from the stage when we're not shooting." He said that radios will always be on and lit whenever they are shooting scenes in the office.

Pitts and ARRL News Editor S. Khrystyne Keane, K1SFA, have been working with Amodeo to make sure that Amateur Radio is correctly portrayed in the show. Keane also provided ARRL and Amateur Radio-related materials that are used on the set, such as issues of QST, NCJ and QEX, as well as a call sign map, a 2012 ARRL Handbook, a 2012 ARRL calendar and various ARRL stickers (look for one on the HF rig). "We also sent fake versions of DXCC, Worked All States and Worked All Continents certificates, as well as a Morse Code Proficiency Certificate," Keane explained. "Each certificate bears the name Mike Baxter and has KA0XTT as the call sign. All the certificates have issue dates of December 25, playing upon Tim Allen's role in The Santa Clause movie series."

Amodeo told the ARRL that he also installed a Comet CHV-5X HF dipole and GP-1 antenna for 2 meters and 70 cm (courtesy of NCG/Comet) "up high, about 50 feet, inside the sound stage. The ultimate goal is to have the hams on our staff make contacts from our stage during down times."

Last Man Standingalso stars Nancy Travis (Three Men and a Baby) as Mike's wife and Hector Elizondo (Pretty Woman, The Princess Diaries, Monk) as Mike's boss. Amodeo also produced the critically acclaimed Sports Night and Arrested Development.

2916. Drake TR4 and TR4A available

Yahoo group: IndyHamRadio
Date: 2011-12-16 18:46:25 UTC
From: Ken Bandy, KJ9B
Topic: 2916 Message: 2916

Hello all. I received a note from a long time ham that is not as active as he used to be, and has some equipment he no longer has a need for. I told him I would post his info here, and see if there is any interest. He has a Drake TR4 and TR4A and a couple of handheld 2 meter handies, etc.

His name is Roger Fecher, KB9KUH, and he can be contacted via his cell phone at 317 826 8950, or by email at rjfecher@.... Please contact him directly if you're interested.

Thanks,
Ken Bandy, KJ9B

2917. Call for volunteers: 2012 POCAR

Yahoo group: IndyHamRadio
Date: 2011-12-18 11:25:37 UTC
From: Bob Burns W9RXR
Topic: 2917 Message: 2917

I'd like to call everyone's attention to an item that appeared in the December 2011 ARRL Indiana Section newsletter. My apologies for cross-posting to several lists.

==========

ANNUAL PURDUE OUTING CLUB ADVENTURE RACE RADIO SUPPORT

We will again provide amateur radio communications for the Purdue Outing Club Adventure Race (POCAR http://www.purdueoutingclub.org/pocar). POCAR is an orienteering event that will cover nearly fifty miles of hilly wooded terrain to map and locate forty or more secret checkpoints. This time, the event will be held on January 14th, 15th and 16th 2012 in the Hickory Ridge area of the Hoosier National Forest [south of Monroe Reservoir and east of SR 446]. This is the Saturday through Monday of the Martin Luther King holiday, a long weekend for many of us.

Much of the setup will begin on Friday before the event. We need a few volunteers that enjoy camping, hiking, roving, and practicing emcomm style communications during the harsh Indiana winter. We will use 6 meter fm simplex primarily with 2 meters as a backup. Participation requires that you provide your own radio equipment, camping accommodations, food, transportation and source of heat, be it firewood or gas. This activity provides an opportunity to operate your radio equipment from your automobile, backpack or to act as a net controller, outpost radio operator, or all of the above!

If you are interested in participating, contact Jan Eberle W9EB one of the following ways:
w9eb@... or (765)494-3797 daytime office phone.

==========

I worked this event last year and I'm making plans again for this year. The event is a real challenge. Wintry conditions, remote territory, unfamiliar communications (many of us don't do much 6m FM simplex). Eb didn't mention it, but we are also going to try some APRS this year hopefully with the help of a temporary digipeater or two.

A few of us are "all-in" for this event and will be down there the entire weekend. But, if you only have a day or a few hours available, I'm sure Eb can find an assignment for you.

Bob...

Yaesu’s Amateur Radio Division Breaks with Motorola, Changes Name to Yaesu Musen

12/28/2011
After four years under the Motorola umbrella, Yaesu has split from that company. According to Vertex Standard President and Chief Executive Officer Jun Hasegawa, effective January1, 2012, Motorola will keep the Vertex Standard Land-Mobile Division, while the amateur, marine and air-band will be under the Yaesu Musen banner. The new company will be known as Yaesu USA here in the US.
“This reorganization will allow us to concentrate in amateur, marine and air-band business, which will better leverage and align the strengths of our entire business operation,” Hasegawa said in a press release dated December 27. “We believe that there is an exciting opportunity to evolve our organization to meet the needs of the Amateur Radio, Marine equipment and air band telecommunication industries by continuing to provide specialized services and the highest quality products.”
Hasegawa explained that the new company’s name will be Yaesu Musen, “a name our business partners have been familiar with for over 50 years. We are delighted to bring you the legacy of trust, quality and solid customer service that has always been associated with the Yaesu Musen company name.”
While Yaesu Musen will have a new Japanese address, the address and phone numbers -- as well as the US operations and sales organization -- for Yaesu USA will not change. Dennis Motschenbacher, K7BV, will remain in charge of Yaesu USA’s sales division.

2923. January dinner

Yahoo group: IndyHamRadio
Date: 2012-01-02 19:53:59 UTC
From: Rhonda
Topic: 2923 Message: 2923

Greetings and Happy New Year!

The first dinner of the new year is planned for January 21st at 7pm. This time we are going over to the west side to The Paragon Pancake House & Restaurant located at 118 S. Girls School Road, Indianapolis, IN 46231. It is right off of Route 36 or Rockville Road. You can check out their menu on www.paragonrestaurant.biz.

If you are not familiar with our dinners or new to the group, let me explain what this is. We are a group of ham radio operators who gather once a month for dinner which includes spouses, children, and signficate others. The dinner conversation does not revolve around ham radio and so far, most everyone who has joined us has done so more than once. We go to restaurants that are family-friendly (non-smoking) and usually not a chain or at least a small chain. We try to rotate around to each side of town so that nobody is stuck driving a long ways every time.

Hope to see you all there!

73,

Steve & Rhonda

2930. 2M digital modes

Yahoo group: IndyHamRadio
Date: 2012-01-06 02:58:57 UTC
From: wisemanb@ameritech.net
Topic: 2930 Message: 2930

Is anyone (beside me) interested in trying some of the digital modes on 2M? Perhaps PSK31, PSK250, or MT63. With the idea of down the road using NBEMS in a digital ARES net. A computer with sound card and running Fldigi (free) or other digital software would be required. But to begin no interface to the radio is needed. You can hold the pc mike near the radio speaker to receive and hold the radio mike near the pc speakers to xmit. If interested in exploring drop me an email.

Well, it's up to the individual voter to determine for themselves if he is a crook or not.

I've just decided that I'm so sick of all the political misinformation flying about that I would correct anything I could regardless of the candidate. "One of the jobs of a PIO is to stop rumors and half truths." The facts are that about six years ago Romney made a statement about hams which he subsequently changed after he learned more about what we do.

Just like the facts are that as of January 9, 2012 there are 746,698 licensed US hams according to the FCC database (hamdata.com/fccinfo.html).

From: KB9BVN
Topic: 2934 Message: 2941

4 million votes? We have less than 800,000 US hams, and I seriously doubt they are all voting since a lot of them are under the age of 18 years. We do good to get more than a couple thousand to comment on FCC issues.

I find this article humorous .
But i enjoy talking on our local repeater every day.
So i guess that makes me a LID..LOL.
But my questions is...why did we purchase these repeaters if people dont want us to talk on them ?
Are we waiting to stand by just for emergency communication to come across the repeater airways ?
I whole heartily ask people to use our repeaters every chance they get.
Ham radio is about fellowship just as much as it is about Em Comms.
I find myself saying . "WY9L for ID" ,and i hear many hams do this in all areas that i have traveled, lol, i don't feel it is that big of an issue.
I hope people will continue to use their repeaters every day and enjoy our hobby.

2945. Forwarding message on Weather Symposium

Yahoo group: IndyHamRadio
Date: 2012-01-14 01:59:12 UTC
From: John
Topic: 2945 Message: 2945

Hello Indiana amateur radio groups,

The 2012 Central Indiana Severe Weather Symposium is rapidly approaching, and registration is open. For those who have not attended one before, the CISWS is a biennial all-day weather information session for spotters and weather enthusiasts, providing interesting and informative speakers on various severe weather related topics. This year's symposium will be held on Saturday, March 10th, from 8:30 AM to 4:00 PM, with registration sign-in and breakfast beginning at 7:15 AM.

The agenda is still being finalized, but confirmed speakers as of this time include The Weather Channel's Mike Bettes, and nationally-known tornado damage expert Tim Marshall, along with Fox 59's Brian Wilkes and meteorologists from NWS Indianapolis and NWS Northern Indiana.

Find all the information on the symposium, including the registration form, cost, and directions at:

http://www.crh.noaa.gov/news/display_cmsstory.php?wfo=ind&storyid=40755&source=0

or contact Joe Nield NWS Indianapolis

2947. ARRL January VHF Sweepstakes, 1900 UTC Saturday, 1/21 - 0359 UTC Monday, 1/23

Yahoo group: IndyHamRadio
Date: 2012-01-19 07:17:42 UTC
From: Mark Thompson
Topic: 2947 Message: 2947

http://www.arrl.org/january-vhf-sweepstakes

ARRL January VHF Sweepstakes, 1900 UTC Saturday, 1/21 - 0359 UTC Monday, 1/23

Full Contest Details
1.Objective:To work as many amateur stations in as many different 2 degrees x 1 degree grid squares as
possible using authorized frequencies above 50 MHz. Foreign stations
work W/VE amateurs only.
2.Date and Contest Period:The date will be announced annually by the ARRL but will generally be
the third or fourth weekend in January. Begins 1900 UTC Saturday, ends
0359 UTC Monday (January 21-23, 2012).
3.Entry Categories:
1. 3.1. Single Operator.
1. 3.1.1. Low Power
2. 3.1.2. High Power
2. 3.2. Single Operator Portable
3. 3.3. Rover.
1. 3.3.1. Rover
2. 3.3.2. Limited Rover
3. 3.3.3. Unlimited Rover
4. 3.4. Multioperator.
5. 3.5. Limited Multioperator.
4.Exchange:Grid-square locator (see April 1994 QST, p 86).
1. 4.1. Exchange of signal report is optional.
5.Scoring:
1. 5.1. QSO points:
1. 5.1.1. Count one point for each complete 50- or 144-MHz QSO.
2. 5.1.2. Count two points for each 222- or 432-MHz QSO.
3. 5.1.3. Count four points for each 902- or 1296-MHz QSO.
4. 5.1.4. Count eight points for each 2.3 GHz (or higher) QSO.
2. 5.2. Multiplier: The total number of different grid squares worked per band. Each
3. 2 degrees x 1 degree grid square counts as one multiplier on each band it is worked.
4. 5.3. Final
score: Multiply the total number of QSO points from all bands operated
by the total number of multipliers for final score.
5. 5.4. Rovers
only: The final score consists of the total number of QSO points from
all bands times the sum of unique multipliers (grid squares) worked per
band (regardless of which grid square they were made in) plus one
additional multiplier for every grid square from which they successfully completed a contact.

1. 5.4.1. Rovers are listed in the contest score listings under the Division from which the most QSOs were made.
6.Reporting:
1. 6.1. Electronic submissions may be emailed to JanuaryVHF@... and hand-written paper logs or diskettes mailed to January VHF, ARRL, 225 Main St, Newington, CT06111.
2. 6.2. Entries that have been electronically generated must submit their log file in the Cabrillo file format. Paper printouts of electronic files are not acceptable substitutes.
3. 6.3. Entries must be emailed or postmarked no later than 0400 UTC Wednesday, February 22, 2012.
4. 6.4. Entries may be submitted using the web applet at www.b4h.net/cabforms
5. 6.5. Rovers who submit scores for the club competition must submit a second summary sheet indicating QSOs and scoreif they make any contacts from outside of the club territory. Indicate clearly on the summary sheet and in log if the log is the total entry or that portion to be counted for the club score.
7.Miscellaneous:
1. 7.1. Stations may be worked for credit only once per band from any given grid square, regardless of mode. This does not prohibit working a station from more than one grid square with the same call sign (such as a Rover).
2. 7.2. Only one signal per band (6, 2, 11/4, etc) at any given time is permitted, regardless of mode.
3. 7.3. Multi-operator stations may not include QSOs with their own operators except on frequencies higher than 2.3 GHz. Even then, a complete, different station (transmitter, receiver and antenna) must exist for each QSO made under these conditions.
8.Awards:Certificates will be awarded in the following categories:
1. 8.1. Single operator.
1. 8.1.1. Top single operator in each ARRL/RAC Section for high and low power.
2. 8.1.2. Top single operator on each band (50, 144, 222, 432, 902, 1296 and 2304-and-up categories) in each ARRL/RAC Section where significant effort or competition is evident. (Note: Since the highest score per band will be the award winner for that band, an entrant may win a certificate with additional single-band endorsements.) For example, if KA1RWY has the highest single-operator all-band score in the CT Section and her 50- and 222-MHz scores are higher than any other CT single operator’s, she will earn a certificate for being the single-operator Section leader and endorsements for 50 and 222 MHz.
2. 8.2. Top single-operator portable in each ARRL/RAC Section where significant effort or competition is evident. (Single operator portable entries are not eligible for single-band awards.)
3. 8.3. Top rover in each ARRL Division and Canada where significant effort or competition is evident. (Rover entries are not eligible for single-band awards.)
4. 8.4. Top multi-operator score in each ARRL/RAC Section where significant effort

or competition is evident. (Multioperator entries are not eligible for single-band awards.)
5. 8.5. Top limited multioperator in each ARRL/RAC Section where significant effort or competition is evident. (Limited multioperator entries are not eligible for single-band awards.)
6. 8.6. Top DX stations where significant effort or competition is evident.
9.Other:
1. 9.1. See “General Rules for All ARRL Contests” and “General Rules for ARRL Contests on bands above 50 MHz (VHF)” in November 2001 QST
2. 9.2. For more information contact contests@arrl.org or (860) 594-0232 .

Topic: 2948 Message: 2948

I haven't been on HF recently. What's the effect of the current solar storm and CME on the HF bands?

And how's the 10 meter band doing?

2949. Re: [IndyHamRadio] solar storms/flare/CME

Yahoo group: IndyHamRadio
Date: 2012-01-25 01:03:12 UTC
From: Ken Bandy, KJ9B
Topic: 2948 Message: 2949

I was on a bit this afternoon, and didn't notice anything that I felt could be attributed to the solar activity. Regarding 10 meters, I was calling CQ on 10 early this evening, around 6:00 pm local time, and had a few QSO with some stations in California, Washington State, Arizona, Trafalgar (IN), and two surprise contacts with ZL (New Zealand), one that was running barefoot!

Ken, KJ9B

2950. One Day Technician Class

Yahoo group: IndyHamRadio
Date: 2012-01-25 12:52:09 UTC
From: KB9BVN
Topic: 2950 Message: 2950

Sorry if this is a re-post. Spread the word.

ONE DAY TECH CLASS SCHEDULED - Franklin Indiana - Johnson County

The Mid-state ARC has scheduled an 8-hour Technician License Class for Saturday February 11, 2012. This entry level amateur radio license class will begin at 8AM and end with a 35-question exam. The class is free but we recommend you purchase the ARRL "Ham Radio License Manual". The book is available on-line at: http://www.arrl.org/ in the Licensing and Education section.

Please read and review this workbook before coming to class on February 11th. We have a lot of material to cover in a short time.

Class size is limited. Please register at secretary@.../

Again, the class begins at 8AM in the training room of the Johnson County Sheriff's office. Food and snacks will be provided for class members. We look forward to welcoming you into the exciting hobby of Amateur Radio.

Jack Parker, W8ISH
Class Coordinator

2951. Wanted: Icom Receiver

Yahoo group: IndyHamRadio
Date: 2012-01-25 22:12:03 UTC
From: Brian Murrey
Topic: 2951 Message: 2951

Looking for a Icom IC-PCR1000 or IC-PCR2500...do you have one you
would be willing to sell at a reasonable price?

It must have the power supply, software, and cable to connect it to the PC.

Did any of these come with USB interfaces or are they just serial?

Thank you

Topic: 2952 Message: 2952

It is with sadness that I relay to all the passing of Russell (Bob)
Robert WA9YZK

His interests extended far beyond the borders of ham radio and was still
riding his motorcycle up in to his eighties.

Bob was busy planning his next springs garden at the beginning of each
fall and little time worrying over his being here to harvest when the
time came. He lived each day to its fullest.

Services will be held tomorrow Thursday Jan. 25 from 3 to 3:00 at
Flanner and Buchanan, 10612 E. Washington St. Indianapolis Indiana.

2953. Icom software-based receiver.

2957. 05 MAR 2012 New FCC 5MHz Rules 00:01 local time

Yahoo group: IndyHamRadio
Date: 2012-02-05 03:49:03 UTC
From: ka9qjg1
Topic: 2957 Message: 2957

FYI

Here is some Great Info on Our 60 Meter Band changes ,I did E-Mail Bonnie KQ6XA Who Wrote thisand ask for Her permission to post it And She said OK , Nice info in Her on QRZ KQ6XA

73 De Don KA9QJG

05 March 2012: New FCC 5MHz Rules start at 0001 hours local time

-an article by Bonnie Crystal KQ6XA

USA's FCC changed its rules for the Amateur Radio Service <http://www.fcc.gov/document/amateur-radio-service-5-mhz> at 5MHz. Here is a basic overview of the changes and rules in plain language, as they apply to the Amateur Radio Service in USA.

* The new rules take effect at 0001 hours Local Time in each of the USA time zones, on 05 MARCH 2012. Note: This is late at night (just after midnight) on the evening of Sunday 04 March 2012, early morning Monday 05 March 2012.
* The FCC adopted the use of the name "60 meter band", to refer to 5MHz amateur radio in the frequency range 5330.5-5406.4 kHz, but USA hams are still only allowed to transmit on 5 specific channels in the band <http://hflink.com/5mhz/#USAchannels> .
* The FCC changed the rules to allow: Phone (Upper Sideband), RTTY, Data, and CW; with specific new limitations on the use of these modes.
* Amateur radio is a "secondary user" in this band, and must not cause harmful interference to other services! Amateur Radio Service must accept interference from primary, other services, and other nations services.
* Operators transmitting data or RTTY must exercise care to limit the length of transmission so as to avoid causing harmful interference to US Government stations.
* General, Advanced, or Amateur Extra Class license only.
* The maximum allowed power level is 100 Watts PEP (ERP) effective radiated power referenced to a halfwave dipole. If another type of antenna is used, the station licensee must maintain a record of either the antenna manufacturer's data on the antenna gain or calculations of the antenna gain.
* Upper SideBand Phone, Data, or RTTY transmissions may use dial (VFO) USB suppressed carrier frequency as listed. Transmissions must not exceed the 2.8kHz bandwidth channel. RTTY modes such as PSK31 must not exceed 60Hz necessary bandwidth. Data modes must not exceed 2.8kHz bandwidth. CW bandwidth must not exceed 150Hz bandwidth and the CW frequency must be at the center of the channel.

* Section § 97.221 automatically controlled digital station,
excludes the 5MHz channels.
* For compliance purposes, please rely only upon the actual FCC rules
<http://www.fcc.gov/document/amateur-radio-service-5-mhz> . More info
about FCC rulemaking <http://hflink.com/5mhz/#FCCrulemaking>

2958. Such helpful folks at W5YI VEC.

Yahoo group: IndyHamRadio
Date: 2012-02-07 19:22:05 UTC
From: kc9brz
Topic: 2958 Message: 2958

I just got a solicitation in the mail (snail mail) from the friendly folks at "The W5YI VEC, INC." reminding me it's time to renew my amateur radio license.

If I fill out their form and send them $7 (check, money order or credit card), "The W5YI VEC, INC." will "electronically file" it for me with the FCC. I could not find anything in the mailer about how to do it myself, or how much it would cost if I deal directly with the FCC.

Being curious, I wondered how much it would cost if I were to do it myself. So, I went online to the FCC, and found this document: http://hraunfoss.fcc.gov/edocs_public/attachmatch/DOC-307141A1.pdf

On page 26, it says there is no filing fee for Part 97, Amateur Radio.

One may renew their amateur radio license (supposedly for free, best I can tell) online at: http://wireless.fcc.gov/uls/

Gee, thanks, W5FYI.

Yes I been doing my own for some time along with others
via the free channels. And know there are others would
just soon as pay the whatever to get it done too.

Also I help with the w5yi team for VE sessions.

So guess it is sort of like do you want to buy a birthday cake

or make it yourself from scratch.

For as long as I've been a ham (20+ years), applying for an amateur radio license renewal has always been free. The FCC allows VECs to collect a testing fee, but that is not an application fee. The FCC sets a maximum for this testing fee.

Also, some organizations have discovered that some ham radio operators are too lazy, too gullible, too confused by the online filing process, or simply don't have Internet access, so they provide a license renewal service for a fee. The FCC does not regulate that fee. If you feel comfortable doing the renewal online yourself, go for it and save the money.

On the other hand, renewal of vanity callsigns requires payment of a vanity callsign fee to the FCC. This can also be done online. But understand that the fee collected is a vanity callsign fee, not a renewal fee.

I have successfully executed several license renewals, vanity callsign applications, and address updates by myself using the FCC's online process. I see no point in paying someone to do something I can easily do myself.

Bob...

If you are an ARRL member, send a NCVEC Form 605 to ARRL-VEC (or drop one off at an ARRL-coordinated VE test session) & they will renew your license for no fee. Otherwise, they charge the normal $15 test fee.

Find a Laurel VEC coordinated session and drop off your completed NCVEC Form 605. Laurel does not charge any fees at all. All of the VE test sessions in Terre Haute are coordinated by Laurel VEC.

As Bob pointed out, this does NOT apply to renewing vanity calls.

2962. February dinner

Yahoo group: IndyHamRadio
Date: 2012-02-10 01:02:25 UTC
From: Rhonda
Topic: 2962 Message: 2962

Greetings!

The February dinner will be held on Saturday, February 18th at 7pm at Bub's Burgers, 210 W. Main St., Carmel, IN.

If you are not familiar with our dinners or new to the group, let me explain what this is. We are a group of ham radio operators who gather once a month for dinner which includes spouses, children, and signficate others. The dinner conversation does not revolve around ham radio and so far, most everyone who has joined us has done so more than once. We go to restaurants that are family-friendly (non-smoking) and usually not a chain or at least a small chain.
We try to rotate around to each side of town so that nobody is stuck driving a long ways every time.

Hope to see you all there!

73,

Steve & Rhonda

IN-ARRL BULLETIN 2012-001
FEB 14 2012 - 16:32Z

The new website for the Indiana CW Traffic Net QIN is now online and open for business.

Many thanks to Jay Farlow W9LW and Ivin Flint W9ILF for their collaborative works in making this new website possible. Future plans include creating a history document of the QIN and eventually adding more NTS training materials.

QIN meets each and every day at 0930 ET (0830 CT) and 2000 ET (1900 CT) on 3535 Khz. All ham radio operators who are interested in CW traffic handling are welcome, especially stations located in Indiana. No prior experience is required. ARRL membership is not required. The net will gladly slow (QRS) to your speed, so send at the speed at which you are comfortable receiving. Join us and experience the traditional method of relaying messages while providing a service to the public and preparing for communications emergencies!

From: Rhonda
Topic: 2712 Message: 2967

Greeting Everyone!

On March 17th at 7pm we will be holding our monthly dinner at Sero's Family Restaurant located at 11720 East Washington St, Cumberland, IN. That's on the East side of Indy just past the Wal-Mart on E. Washington St. We went there for dinner last night and it was really good. They have a little bit of everything from soup and salad, sandwiches, steaks, seafood, pasta and breakfast. For the dessert lovers, they have someone who makes cakes and brings them in. We tried the red velvet cake and it was awesome!

If you have not joined us before, we are simply a group of people who love to talk and eat. The dinners are always at family-friendly restaurants so that those who have children can bring them along. Dinner conversation is usually a bit of everything with some ham radio stuff sprinkled in. Everyone is welcome to join us as this is a very informal group.

Hope to see you all there!

73,

Steve & Rhonda

PUBLIC SEVERE WEATHER OUTLOOK
NWS STORM PREDICTION CENTER NORMAN OK
0309 AM CST FRI MAR 02 2012

...SEVERE THUNDERSTORMS EXPECTED OVER PARTS OF THE OHIO AND
TENNESSEE VALLEYS LATER TODAY AND TONIGHT...

THE NWS STORM PREDICTION CENTER IN NORMAN OK IS FORECASTING THE
DEVELOPMENT OF A FEW STRONG...LONG-TRACK TORNADOES OVER PARTS OF THE
OHIO AND TENNESSEE VALLEYS LATER TODAY AND TONIGHT.

THE AREAS MOST LIKELY TO EXPERIENCE THIS ACTIVITY INCLUDE

CENTRAL AND NORTHERN ALABAMA
NORTHERN GEORGIA
SOUTHERN ILLINOIS
SOUTHERN INDIANA
KENTUCKY
EAST CENTRAL AND NORTHEAST MISSISSIPPI
SOUTHWEST OHIO
TENNESSEE
WESTERN WEST VIRGINIA

ELSEWHERE...SEVERE STORMS ARE ALSO POSSIBLE FROM THE UPPER OHIO
VALLEY AND CENTRAL APPALACHIANS SOUTHWESTWARD TO THE LOWER
MISSISSIPPI VALLEY.

A STRONG UPPER-LEVEL STORM SYSTEM AND ASSOCIATED SURFACE LOW
PRESSURE CENTER OVER KANSAS...OKLAHOMA...AND MISSOURI THIS MORNING
WILL MOVE QUICKLY NORTHEASTWARD TO LOWER MICHIGAN BY THIS
EVENING...WHILE A TRAILING COLD FRONT PROGRESSES EASTWARD INTO THE
OHIO/TENNESSEE VALLEYS. MOISTURE WILL SPREAD QUICKLY NORTHEASTWARD
FROM THE SOUTHERN STATES TO THE OHIO VALLEY BY THIS AFTERNOON IN
ADVANCE OF A COLD FRONT...PROVIDING THE FUEL FOR SEVERE THUNDERSTORM
DEVELOPMENT. IN ADDITION...WINDS AND ALL LEVELS OF THE ATMOSPHERE
WILL INCREASE THROUGH THE DAY ACROSS THE MODERATE RISK
AREA...SETTING THE STAGE FOR LONG-LIVED SEVERE THUNDERSTORMS.

THE MOST DANGEROUS TORNADO RISK AREA IS EXPECTED FROM MIDDLE AND
EASTERN TENNESSEE NORTHWARD ACROSS KENTUCKY TO THE OHIO RIVER THIS
AFTERNOON...WHERE A FEW LONG-TRACK/DESTRUCTIVE TORNADOES WILL BE
POSSIBLE...ALONG WITH DAMAGING WINDS AND LARGE HAIL. FARTHER SOUTH

INTO MISSISSIPPI AND ALABAMA...ADDITIONAL SEVERE STORM DEVELOPMENT IS EXPECTED LATE THIS AFTERNOON INTO TONIGHT NEAR AND AHEAD OF THE COLD FRONT. THESE STORMS WILL SPREAD ACROSS CENTRAL AND NORTHERN MISSISSIPPI/ALABAMA AND NORTHERN GEORGIA THIS EVENING INTO THE OVERNIGHT HOURS...WITH AN ACCOMPANYING RISK FOR TORNADOES...DAMAGING WINDS...AND LARGE HAIL.

STATE AND LOCAL EMERGENCY MANAGERS ARE MONITORING THIS DEVELOPING SITUATION. THOSE IN THE THREATENED AREA ARE URGED TO REVIEW SEVERE WEATHER SAFETY RULES AND TO LISTEN TO RADIO...TELEVISION...AND NOAA WEATHER RADIO FOR POSSIBLE WATCHES...WARNINGS...AND STATEMENTS LATER TODAY.

..THOMPSON.. 03/02/2012

From: N9NWO
Topic: 2972 Message: 2972

Another reason to get on IRLP

-- RELEASE PDF IS IN THE FILES AREA --

http://f1.grp.yahoofs.com/v1/EPFUT60sQHXt1H24Cn68FryPwlQSanH4XIz9XO84wI4UvaSu9YuzgW7Q7VTFQjV0OjxO2cXRE4235YSKywBE/IRLP%20Topic%20Channels%20News%20Release%20-%20Rev%201.pdf

A new activity is coming to Amateur Radio. Beginning March 3, 2012 the Internet Radio Linking Project (IRLP) will host IRLP Topic Channels. Interested in history? Media? DX? There's an IRLP topic channel for you.

With nearly 3000 IRLP nodes worldwide, amateur radio operators can access a nearby IRLP node or repeater. Or, they can build an IRLP node, or even buy a plug-and-play node and join the conversation today. There are nearly thirty reflectors scattered around the world that make it possible for nodes to talk to one another. Each reflector has ten channels and most of these go unused. The owners of these reflectors have contributed more than twenty channels for topic based discussions.

There is an IRLP Topic Lounge that serves as the meeting place for the IRLP Topic Channels. Then there are six channels with topics like DX, sports, movies and media, history and current events, emergency communications, and even the meaning of life itself. Then there are three flex channels that change periodically. These now include election 2012, stamp collecting and "the next new thing". The number of channels is expected to increase as interest in new topics develops.

The IRLP Topic Channels is the brainchild of Michael Bloom, W7RAT, and is sponsored by the Oregon Radio Internet Group, a radio club established to promote the use of voice of internet combined with actual ham radio. IRLP Topic Channels is supported by reflector owners in the US, Australia, Canada, and Norway. While IRLP is the backbone of the system some topic channels will provide access via Echolink and other VOIP systems.

The IRLP system was designed in 1998 by David Cameron VE7LTD who has volunteered channels on his own reflectors for this project. For more information on using IRLP visit www.irlp.net. The first group of topics and channels is expected to be published in the April issue of QST Magazine. For the latest list of channels visit www.irlptopics.net for the latest topics or to suggest your own.

IRLP Channel Topics For March 2012
9093* IRLP Topic Lounge
9554 Emergency Comm.
9001 DX Channel

From: Brian Murrey
Topic: 2977 Message: 2977

Are you a CW Op looking for something to do? The Indiana Section of the ARRL National Traffic Service is a great place to hone skills, build speed, and learn the ropes of traffic handling.

Visit: http://indianacw.net And read all about it. QIN welcomes you to the NTS, and it is a whole lot of fun.

If you are a bit gun shy about using your CW skills to handle traffic, the Indiana Section also runs a slow speed NTS traffic net called ICN. You can learn more about it by visiting their website.

The 442.900 repeater in Danville has been temporarily taken off the air.

The 442.775 D-Star repeater owned by Gary Day KA9ZYL is using the 442.900 feedline and antenna on a trial basis. Gary is looking for a home for his repeater and Hendricks County RACES may look at using D-Star in the future for amateur radio auxiliary communications, so we decided to put Gary's repeater on the air for a short time. This is only a test. We plan to put the 442.9 back on the air in a month or so.

If you have D-Star equipment or know someone you can borrow a D-Star radio from, you might want to give this repeater a try.

2983. April Ham Radio Dinner

Yahoo group: IndyHamRadio
Date: 2012-03-28 01:53:01 UTC
From: Rhonda
Topic: 2740 Message: 2983

The next ham radio dinner will be held Saturday, April 21st at 7pm. This time we will be at Teddy's Burger Joint located at 2222 Southport Rd in Indianapolis. It is at the corner of Southport Rd and Belmont Ave behind Anytime Fitness.

This is a very casual dining experience and a full menu can be found by visiting www.teddysburgerjoint.com.

If you haven't yet joined us for one of our dinners, we are a group of ham radio operators who get together once a month to go out to dinner. We are not a part of any group and anyone who is a ham is welcome to join us and bring their family. We try to visit family-friendly places and our conversation often revolves around things other than ham radio so that significant others who are not hams still fell welcome and part of the group.

Hope to see you all there!

Steve and Rhonda Curtis

From: Brian Murrey
Topic: 2984 Message: 2984

From QRZ.COM

CQ columnist Fred Maia, W5YI, a leading amateur radio journalist, educator and pioneer of volunteer examining, passed away on March 28 after a battle with cancer.

Maia, 76, published "The W5YI Report," dubbed "America's Oldest Ham Radio Newsletter," from 1978 to 2003, and has been a CQ contributing editor since 1985. His regulatory affairs column, first titled "Ticket Talk," then "Washington Readout," offered news and perspective on FCC and ITU (International Telecommunication Union) actions, and helped untold numbers of hams wend their way through often-confusing mazes of the volunteer examining and vanity call sign systems.

"Fred was one of those unusual people who was more focused on doing the job than he was on getting credit for doing it," noted CQ Publisher Dick Ross, K2MGA. "His 'job' was to help this hobby grow, and he succeeded admirably."

Maia was also a driving force in amateur and commercial radio licensing and education materials since late 1970. He was the first Volunteer Examiner Coordinator appointed by the Federal Communications Commission in 1984, and his W5YI-VEC group grew into the nation's second-largest VEC after the ARRL. Fred served as President of the W5YI-VEC until his retirement in October of 2000. In 1986, he founded The W5YI Group to develop, publish and sell amateur and commercial radio license study materials. Fred also formed National Radio Examiners to provide examination services as a Commercial Operator License Examination Manager (COLEM), and co-wrote a commercial radio licensing study manual with Gordon West, WB6NOA.

As a longtime member of the National Conference of Volunteer Examiner Coordinators (NCVEC) and its Question Pool Committee (QPC), which develops and maintains the question pools for amateur radio license exams, Fred was deeply involved in many of the changes in amateur radio licensing over the past quarter century. This includes the phased elimination of Morse code requirements for amateur licenses and the current system of three license classes, Technician, General and Amateur Extra.

A resident of Arlington, Texas, Fred was a graduate of the U.S. Air Force Radio Operator’s School, and was first licensed as an amateur radio operator as a teenager in Rhode Island, where he grew up. He is survived by his wife, Doris, and two daughters. A memorial service will be held, 3:00pm, Saturday March 31, 2012 at Moore Funeral Home, 1219 North Davis Dr. ,Arlington, TX 76012.

AES Superfest Forum Video Archive

http://www.ustream.tv/channel/superfest

2012 Superfest Forum Schedule

VHF Operations: 8:45 AM to 9:30 AM
VHF basics including: EME, 10 GHz Operations, Weak Signal
Contests, Rover Operations. Using Arduino for APRS, rotor control,
keyers, radio control, etc.
Presented by Ken Boston, W9GA and Gary Sutcliffe, W9XT (Unified Microsystems)

The Doctor is IN!: 9:45 AM to 10:30 AM
Bring your technical questions and Joel will do his best to
answer them on the spot. In some cases, he will need to consult others,
or do some antenna modeling or other analysis before he can provide a
full answer and will respond via email directly.

Presented by Joel Hallas, W1ZR (QST Magazine)

Recent Advances in Digital Sound Card Modes: 10:45 AM to 11:30 AM
Most hams own computers and that is causing a surge to the digital
modes. An overview of what is required and specifically equipment from
West Mountain Radio. Operation and advantages of modes like JT-65, WSPR,
WINLINK, WINMOR, etc.
Presented by Sholop Fisher, K7TMJ (West Mountain Radio)

NOISE, the SCOURGE of ham radio and how to deal with it!: 11:45 AM to 12:30 PM
An "almost no math" discussion of noise reduction technologies and how
to take advantage of them in your ham radio operations. Besides acoustic
noise in the shack or vehicle, there are numerous outside sources such
as atmospheric, power lines and consumer electronics-generated RFI. Add
these to noise inside your radio and accessories and the problem can be
monumental. Plus, a bonus overview of what's happening with the newest
versions of Ham Radio Deluxe software.
Presented by Randy Gantry, K0CBH (Timewave Technology)

Its time for thinking OUTSIDE the shack!: 12:45 PM to 1:30 PM
Things you can do outside to make your operation a lot easier,
safer and more effective. Analyzing your available space and deciding
how to install the best possible performing antenna. Effects of bands at
various heights, tuning to resonance, grounding and effective lightning
protection. Recommendations to help make any station play better.
Presented by Emmett Hohensee, W0QH (Radiowavz Antennas Inc.)

The Heil & West Show: 1:45 PM to 2:45 PM
Spend a hilarious hour with these ham legends as they team up to talk

about equipment and audio related stuff. Gordo will be adding his own unique take on the fun side of ham radio. Plus, information on Ham Nation with Bob Heil on TWITT.TV
Presented by Bob Heil, K9EID (Heil Sound) &
Gordon West, WB6NOA (Gordon West Radio School)

2012 Announcement & Rules
2012 Spring VHF/UHF Sprints
Sponsored and organizationally supported by
the Central States VHF Society (csvhfs.org)
hosted by John Kalenowsky, K9JK
  It is our pleasure to announce the 2012 Spring VHF/UHF Sprints.

Everyone is encouraged to participate, even if only in a small way. The rules have intentionally remained simple, and the focus of these FIVE events continues to be for single operator, single transmitter entries, both "fixed", "rover" and "Rookie"."Distance Scoring" will continue in 2012 for all 5 of the Spring Sprint Bands/events

The "Rookie" classification IS continued for 2011, to ENCOURAGE 'first-time' participants, from their own stations OR as "guest-op" at an "experienced" station to introduce newcomers to weak signal vhf/uhf operations which, hopefully, will 'whet' their interest in such and lead to their participation in the future. This is NOT intended to be multi-op, the "Rookie" operator is expected to be the voice behind the mic, hand on the key/keyer, hands on the keyboard, PTT, tuning knobs and rotor controls. When an experienced operator is present for a "Rookie", their role IS to be "Guidance", NOT operating. Clear identification of Rookie entrants is requested by comments in the SOAPBOX: lines for Cabrillo formatted logs or in the Comment area of the Summary Sheetfor paper logs. The detail should identify who is the "Rookie" and list any "experienced" operator(s) who was(were) present.
Please note that, for 2012, the shortened log submission date windows remain and consider the following change an EVEN STRONGER encouragement for electronic log submissions using the Cabrillo format. While paper logs will continue to be accepted, the policy that any MAILEDlogs MUST be RECEIVED by the log deadline for each band that was started in 2009 continues, so those who submit by Mail MUST allow for the post office transit time (probably a week early to be certain, which still allows participants a full week to process logs from a 4 or 7 hour event). There have not been THAT many "paper" logs and generally, they've had smaller numbers of QSOs but I'd really appreciate if "paper" log submitters would at least CONSIDER TRYING the "Web-to-Cabrillo" as described in Rule 7.2.2. If you MUST mail your entry, DO NOTE the log submission MAIL address in 7.3.2.
** Awards and Results for 2008 through 2010 may be viewed here.

Wishing you the very best of VHF! 73,

John Kalenowsky, K9JK

---

1. Object: To work as many amateur stations in as many 2 degree by 1 degree grid squares as possible, using authorized amateur frequencies on the 50, 144, 222, 432, 902 MHz and above bands over five separate events during the "Spring" (April and May). 2. Contest Period:
2.1. - 144 MHz
The 144 MHz Sprint will be from 7 PM until 11 PM local time on Monday, April 9, 2012.
2.2. - 222 MHz

The 222 MHz Sprint will be from 7 PM until 11 PM local time on Tuesday, April 17, 2012.
2.3. - 432 MHz
The 432 MHz Sprint will be from 7 PM until 11 PM local time on Wednesday, April 25, 2012.
2.4. - Microwave (902+)
The Microwave Sprint will be on Saturday, May 5, 2012, from 6 AM until 1 PM local time. This includes all Amateur frequencies above 902 MHz. Please include band data in summaries and logs. NOTE: use of Liaison Frequency is encouraged.
2.5. - 50 MHz
The 50 MHz Sprint will be from 2300Z Saturday, May 12, until 0300Z Sunday, May 13, 2012.
3. Exchange: Grid-square locator - PLEASE EXCHANGE and LOG SIX-Character Grid Locators where possible. Correct exchange of FOUR-Character Grid Locator (and call signs) is the minimum requirement for a valid contact but we'd REALLY like to see SIX-Character locators exchanged and recorded in the submitted logs.
What's that, you say you have no clue what your SIX-Character Grid Locator is?
To assist you with that, AFTER reading the instructions that follow, please click here.
The click above will take you to a Google Map showing the borders of the 20-degree by 10-degree "MAJOR Grid" of "EM" as well as parts around it. IF you know your FOUR-character Grid Locator (also known as "MINOR Grid"), you can enter it in an entry box at the bottom of the page, which may get you closer to where you want to be looking. In any case, you can then navigate as well as Zoom in and out using the controls at the upper left of the screen.
When you click a point on the map, however, the Latitude and Longitude of that point ALONG WITH THE SIX-Character Grid Locator (also known as "sub-grid") for that point will pop up in a text balloon and the border of the SIX-Character Grid Locator will be shown. If there is good aerial photo coverage in your neighborhood, you might even be able to find your house!
This is provided as a service to the Amateur Radio Community by Laurent/Larry Haas, F6FVY, using the Google Maps API. Thanks to Larry and Google! Try it, I think you'll like it! 4. Scoring:
Scoring continues to be distance based, 1 point per kilometer, for 2012.
It would certainly make things easier if EVERYONE knew, exchanged and logged SIX-Character locators but it is likely more certain that there will be participants that only know their FOUR-character locator. In such a case, RECORD what the other station actually SENDS as their Grid Locator even if JUST the FOUR characters. DONOT use "look up" systems in logging programs, such as Ham Radio Deluxe has or can be done with Super Check Partial files...RECORD what the other station sends (it IS okay if what your lookup 'matches' what they sent but be sure to CHANGE it if they send something different).
I believe that W3KM's VHFLOG Logging Program has the capability to record SIX Character Locators (or 4 character) and can calculate distance scores based on 1 point per kilometer BUT the KEY item needed is that the program CAN record SIX-character Grid Exchanges and produce a proper CABRILLO formatted log file.
Rovers can be worked again as they enter a different "Grid Square" (Grid-4) but it is hoped that Rovers will have capability to know their SIX Character SUB-grid locator and give that as their report. "Dupes" will be allowed with Rovers (from different sub-grids in the same Grid-4 locator) but only the LONGEST single path length will be counted for a given Grid-4.
5. Reporting: Electronic Logs (Cabrillo format ONLY) must be received via e-mail or paper logs WITH summary sheetRECEIVED via Mail no later than following deadlines (roughly two weeks after the close of each event):
5.1. - 144 MHz - April 24, 2012

5.2. - 222 MHz - May 2, 2012
5.3. - 432 MHz - May 10, 2012
5.4. - Microwave (902+) - May 21, 2012
5.5. - 50 MHz - May 29, 2012
6. Awards:
6.1. Certificates will be awarded as follows:
6.1.1. TOP FIVE individual scores for each of the five Sprint "band" events (Single-Op Fixed, Rover and Rookie will be considered for this ranking).
6.1.2. TOP FIVE cumulative Single-Op Fixed scores (adding scores together by callsign used from each of the events, up to 5, for which valid logs are received).
6.1.3. TOP FIVE cumulative Rover scores (adding scores together by callsign used from each of the events, up to 5, for which valid logs are received).
6.1.4. TOP FIVE cumulative Rookie scores (adding scores together by callsign used from each of the events, up to 5, for which valid logs are received).
6.1.5. If any Plaques are sponsored for a particular finish above (targetting to have First Place for each of the Category Cumulative Scores and Top Score for each Band/Event sponsored as a minimum) the Plaque will be given in lieu of the certificate. "Specialty" Plaques will also be considered (such as for best finish in a region) if anyone wants to sponsor such (and can provide a clear criteria). Please e-mail John at springvhfuhfsprints@... regarding that.
6.2. Prizes: As they are sponsored, prizes will be awarded based on criteria of the sponsor. As an example, the simplest criteria will be "random drawing from all logs received."
7. Submission of Logs:
7.1. By submitting a log, participants confirm that they have observed all contest rules, as well as all regulations established for amateur radio in their country and that their log submission is true and accurate to the best of their knowledge. Participants further agree to be bound by the decisions of the Spring Sprint host(s), sponsor(s) and scoring team.

7.2. Electronic Logs:
7.2.1. The "Cabrillo" log format is now the standard for the Spring Sprints.
7.2.1.1. Use the following text for the "CONTEST:" line in the header of the Cabrillo Log file:
For 144 MHz, use VHF-SPRINT-144MHZ-SPRING
>For 222 MHz, use VHF-SPRINT-222MHZ-SPRING
>For 432 MHz, use VHF-SPRINT-432MHZ-SPRING
>For "Microwave" (902 MHz & Up), use VHF-SPRINT-MICROWAVE-SPRING
>For 50 MHz, use VHF-SPRINT-50MHZ-SPRING7.2.1.2. Until logging programs with 'official' support for these events become available, the closest format is probably for the June or September ARRL VHF QSO Parties (as long as the logging program knows how to handle SIX-Character Grid Square exchanges). It may be necessary to manually edit the "CONTEST:" line in the file and Claimed Score is pretty much "guaranteed" to be incorrect since scoring is now based on distances as opposed to the "traditional" QSOs time Multipliers but the QSO data should be correct.
7.2.1.3. E-mail logs to: springsprintlogs@... preferably using a "Plain Text" e-mail format, with ONLY "your call" and the "band" in the subject line (WA2FGK 144 -or- K3TUF MICROWAVE for example) and with the log file as an attachment named "<your call>.LOG" (e.g. W9GKA.LOG)

7.2.2. "Web-to-Cabrillo": Bruce Horn, WA7BNM, has graciously agreed to provide 'web forms' to facilitate generation and AUTOMATIC SUBMISSION of Cabrillo-formatted logs for the Spring VHF & Up Sprints at the http://b4h.net/cabforms web site that he maintains. You may have to scroll down the homepage a bit to the "Other Contests" area to find the ones for the Spring VHF Sprints and they may not be there until just before the actual contests. PLEASE consider using these to generate and submit electronically instead of submitting a paper log. MANY THANKS to Bruce!

7.3. Paper logs:
7.3.1. Paper logs must include a Summary sheetand the log sheets themselves should include the following information:
Band (in MHz, e.g. 50, 144, 222, 432, 902. For above 902, change to GHz, e.g. 1.2, 2.3, 3.4, etc.)Mode (e.g. CW, PH, FM, RY)Date/Time (UTC Date and Time are strongly preferred but "local" are acceptable and it is usually apparent which was used when logs are received)Callsign SENT (can be listed at the top of a page OR on each line)Grid Locator SENT (PLEASE give your SIX-character locator when known AND send it as your exchange)Other Station's CallsignOther Station's Grid Locator (PLEASE ask for and record SIX-character when the other station provides it BUT, if the other station only reports FOUR-character, record the 4 characters)7.3.2. "Snail Mail" paper logs to:

2012 Spring Sprintsc/o Chuck Towner, W9KQJPO BOX 73PALATINE, IL 60078-0073 And remember that snail-mailed logs must be RECEIVED BY (NOT postmarked by) the specified deadline for each event.Questions ? Email springvhfuhfsprints@...

2992. Fwd: ARLB007 FCC Seeks Public Comments on Emergency Communications by Amateur Radio and Impediments to Amateur Radio Communications

Yahoo group: IndyHamRadio
Date: 2012-04-05 18:56:53 UTC
From: Mark Thompson
Topic: 2992 Message: 2992

SB QST @ ARL $ARLB007
ARLB007 FCC Seeks Public Comments on Emergency Communications by
Amateur Radio and Impediments to Amateur Radio Communications
ZCZC AG07
QST de W1AW ARRL Bulletin 7 ARLB007
From ARRL Headquarters Newington CT April 5, 2012
To all radio amateurs SB QST ARL ARLB007
ARLB007 FCC Seeks Public Comments on Emergency Communications by
Amateur Radio and Impediments to Amateur Radio Communications
In response to the Congressional directive to prepare a study to
assess Amateur Radio's role in emergency and disaster communications
and the impact of private land use regulations on the amateur
community's ability to provide such communications, the FCC issued
DA 12-523 soliciting comments from the public. The period for public
comment runs until May 17, 2012.
"As part of the study contained in Public Law No. 112-96, the
Commission has opened a 45 day period for comments to be filed on
the issue," said ARRL Regulatory Information
Manager Dan Henderson,
N1ND. "Because of the short deadline for the study to be completed
and presented to Congress -- before the end of August -- the ARRL
and the amateur community must quickly mobilize their response."
The FCC Public Notice focuses on two specific areas for comments.
The first is the role that Amateur Radio has played and continues to
play to support emergency and disaster relief organizations, such as
FEMA and local/state emergency management agencies. The second is to
determine impediments to enhanced Amateur Radio communications. This
would include the impact that private land-use regulations -- such
as deed restrictions and homeowner association covenants -- have on
the ability of licensed amateurs to fully participate in providing
support communications to the served agencies.
"This study is not about zoning ordinances or regulations adopted by
the local or state governments," Henderson explained. "Amateurs
already have the
limited protection of PRB-1 to assist them with
those situations. The areas of concern here are the limitations that
are placed on a property when it is purchased, either as part of the
deed of sale or by restrictions imposed by the
neighborhood/homeowner's association. Those restrictions --
sometimes referred to as CC&Rs -- are not currently covered by the
FCC's PRB-1 decision from 1985."
To allow the ARRL to quickly collect and collate relevant

information from the amateur community to help support the filing it will make with the FCC on this issue, a website has been setup. The site -- www.arrl.org/ccr-study-information -- provides details about what kind of information is needed by the ARRL.
Also on the site, you will find links to two online data collection forms. The first form allows you to provide information about specific emergency communications in which Amateur Radio has played a role since January 2000. The second form asks for specific

information on the CC&Rs/deed restrictions that control your property. It also asks you to provide information on how those restrictions have impacted your ability to fully support emergency communications.
"Whether you are an ARRL member or not, your information and situation are important to helping us make the case for all amateurs," Henderson said. "Whether your support communications are with ARES, RACES, SKYWARN, CERT or other emergency and disaster groups, your voice should be heard. If you cannot operate effectively from home during an emergency because CC&Rs prohibit adequate antennas on your property, that is important to document and quantify. This issue affects all of Amateur Radio, not just ARRL members."
Henderson said that due to the short timeframe that the FCC has allotted for public comment, time is of the essence. In order to allow the ARRL to develop its comments, the ARRL asks that all information sent by the amateur community be
received at the ARRL no
later than April 25, 2012: "We realize this is a very short turnaround asking for your response, but this is based on the time provided by the Commission for the comment window."
It is important that when you provide specifics of your CC&R, you also provide the ARRL with a copy of its actual wording. If you have the CC&R in a digital format (or you can scan the document into a file), it can either be uploaded through the website above or it can be sent via an e-mail to CCRinfo@... . If you do not have an electronic format, a hard copy may be sent via US mail to: CCR Study Information, ARRL, 225 Main St, Newington, CT 06111.
"We need factual, specific details," Henderson said. "The more accurate information we have -- including copies of the CC&R language -- the stronger case we can make. Having copies of the exact CC&Rs is important. It allows us to demonstrate the wide variation of restrictions. Including the specific
text is as
important as any other piece of information you provide."
If you have questions about what is being requested, you may contact the ARRL Regulatory Information Office via e-mail at reginfo@.... "Again, time is of the essence in this matter,"
Henderson said. "This is the best opportunity that amateurs have had to address the impact of overly burdensome private land use restrictions. If Amateur Radio is to succeed in this effort, it is

going to take all of us working together."

2996. Morse code apps for IOS (iphone/ipad).

Yahoo group: IndyHamRadio
Date: 2012-04-09 15:48:52 UTC
From: kc9brz
Topic: 2996 Message: 2996

The April Fools joke about the Google app for tapping a morse code text message got me looking for more Morse code apps for iOS.

I've been having fun with a 99 cent mobile application called "Morse-It" by Paco Labs. http://pacolabs.com/iOS/MorseIt/?lang=en

An upgrade is $4.99 to unlock more features.

Included in the base app is a morse decoder, which does the same thing basically as my $89 hardware decoder device from MFJ. I got out my old straight key oscillator (a morse-code key connected to a device that makes a beep when you press the key) and it correctly decoded, and gave me practice.

The base 99 cent app also has an encoding tap pad, to tap out morse code on your device, and if you do it right, it interprets it for you. You can set the tap pad for straight key or paddles, iambic A or B.

The basic (free) version does not have:
- most of the pro-signs in the decode/encode functions,
- the quiz function.
- the Koch trainer.

I'm sure some genius will (or already has) come up with an doo-dad to interface your key/paddles to the iphone/ipad.

Overall, I think the $.99 is worth it. And if you're serious about CW, the $4.99 upgrade should be worth it too. I've spent more than that registering shareware PC programs for morse code training.

2997. Fwd: Oscilloscope Basics This Week - Soldering 101 Last Week

Yahoo group: IndyHamRadio
Date: 2012-04-10 18:58:49 UTC

Subject: [njqrp] "Oscilloscope Basics" presentation online this week on Teamspeak (Tuesday 8pm EDT)

This week's session of Chat With The Designers is this evening (Tuesday), starting at 8pm Eastern (0000z) on Teamspeak.

We are in for a real treat this week, as Alan Wolke, W2AEW, a field applications engineer for Tektronix, will be leading the discussion on a topic he is very familiar with ... *"Oscilloscope Basics".

If you watch an electrical engineer tackling a tough design project, or a service engineer troubleshooting a stubborn problem, you'll see them grab a scope, fit probes or cables, and start turning knobs and setting switches without ever seeming to glance at the front panel. To these experienced users, the oscilloscope is their most important tool but their minds are focused on solving the problem, not on using the scope.

We have a "Notes" page set up with a terrific presentation that we'll be talking to in this session, so be sure you have your browser set to this during the discussion as well ...
http://www.njqrp.org/teamspeak/Apr10.html

If you've not joined us for past topics, you'll find that we have some fun in this 1-hour online meeting talking about various technical topics that are likely of interest to homebrewers and experimenters here in our ham ranks. It's open for everyone and all you have to do is have the Teamspeak driver loaded onto your computer. For guidance on this, see
http://www.njqrp.org/teamspeak/TeamspeakInstructions.html

Looking forward to seeing (hearing) many of our 30-some regulars, and invite others who have not yet joined in on the fun!

73, George N2APB
& Joe N2CX
& Alan Wolke W2AEW

Chat With The Designers ...
http://www.njqrp.org/teamspeak/TeamspeakChat.html
(See this page too for past sessions and MP3 podcasts of the audio portion of each week.)

PS: If you happen to follow us in our audio podcasts each week, the last session on "Soldering 101" is loaded and available at:
http://www.njqrp.org/teamspeak/Mar20.html

2998. Hendricks County Park2Park Relay - July 16, 2012

Yahoo group: IndyHamRadio
Date: 2012-04-17 01:31:31 UTC
From: Bob Burns W9RXR
Topic: 2998 Message: 2998

I'm sending this to several groups, so I apologize for "cross-posting".

The 2012 Hendricks County Parks Foundation Park2Park Relay running race is coming up on June 16, 2012. The event starts at Sodalis Park in southeastern Hendricks County and ends at McCloud Park in the northwestern part of the county. Amateur radio will be heavily involved this year and we'll need lots of operators to fully staff the event.

Please take a look at the amateur radio support web page at:

http://www.hendricksraces.org/park2park

There you'll find descriptions of the types of positions we need to fill. You can also download the assignment sheet listing the exact assignments along with their starting and ending times. A preliminary map of the running route is also available for download. More detailed maps will be posted in the near future.

If you would like to volunteer to help with this event, please check the assignment sheet for a position that fits your availability and then contact me via telephone or email as listed below.

This is a very important event for amateur radio in Hendricks County. Not only will we provide a valuable service for the participants in the race, but we will be able demonstrate our communications skills to county public safety officials. The event organizers, our EMA Director, and myself are counting on amateur radio to help out with this event.

Thank you!

Bob Burns W9RXR

3003. Fw: RE: Amateur Radio Plates

Yahoo group: IndyHamRadio
Date: 2012-04-25 01:50:22 UTC
From: Paul Webster
Topic: 3003 Message: 3003

This is intended for Indiana Amateur Radio Ops & Indiana elected officials, especially the legislators, but Amateur Radio ops in other states may find this interesting in that WB9OMC mentions the fact that HomeLand Security is taking a real interest in the Amateur Radio Service, hence Duane's argument for the new Amateur Radio License plate.

Subject: Fw: RE: Amateur Radio Plates

Hi OM. I have been after my State Senator Ron Alting for YEARS (evidence attached below) to move on getting Amateur Radio Operators a special license plate that would be clearly marked as such. As you might think when you read the emails below, the obfuscation on this leads me to think he will do nothing. Take a look at what I have written and if you think the reasoning is sound, perhaps you can get your state guys up in the NW region to start something.

Please feel free to mention that State Senator Alting has been sitting on this since 2009 or whatever is at the bottom of the attached stuff below. :-) I don't know that he would be too happy to see his emails "quoted around" but perhaps if you get some action from your guys up that way and they prod him a bit he'll get off his ass and actually DO something. :-) I really don't give a crap WHO writes the legislation or whatever they need to do, I just want to see something actually HAPPEN. Alting can support it or not - and if he does NOT, I'll be working on kicking his butt out of office.

Every Tom, Dick and Harry in this state has some special license plate whether they actually do a damn thing to help anybody or not. Considering the new Uncle Sam moves that would potentially tie Amateur Radio in with Homeland Security; considering all that we have done and been recognized for in the past; I feel like our time has come.

I'd like to see this thing spread to be a statewide movement. If what we need to prod some elected people to do their jobs is some publicity and mounted pressure, I'm all for it.

TNX and best 73
Duane
WB9OMC

3004. Re: [Inares] Fw: RE: Amateur Radio Plates

Yahoo group: IndyHamRadio
Date: 2012-04-25 06:29:48 UTC
From: David Spoelstra
Topic: 3003 Message: 3004

I can speak to this a little since I have been the Indiana ARRL SGL for many years and have talked to numerous legislators and the BMV about this.

"Every Tom, Dick and Harry in this state has some special license plate". Absolutely true, and every Tom, Dick, and Harry pay an extra $40 per plate per year for the privilege of having that special license plate (some plates a few dollars more and some a few dollars less).

However, many years ago we did push through a special deal from the Indiana government. In Indiana, you can get callsign plates for just $8! http://www.in.gov/bmv/2406.htm That is *way* lower than any other state. Before we got this deal, we used to have to order a vanity plate and it cost us $48!

OK, so you're still not happy and want a plate with a special amateur radio seal on it? OK, it's a simple matter of economics! To get a specialty plate a club or organization must pay in advance for 5,000 blank plates with the specialty seal to be made (they get a kick back as the plates are sold). Even after that if you don't sell at least 1,000 a year, the BMV will drop your organization because it's not worth their time. About 6 years ago I had the BMV run a search on the current number of $8 amateur radio callsign plates. Guess what? There were less than 1,000 amateurs statewide taking advantage of our current callsign plates! I won't even go into the issue that most amateurs can't seem to agree on anything and some brave soul/group would need to come up with a amateur radio license plate design and seal and then take the heat because someone else wanted a tower on the design or an FT-9000 or the ARRL logo, etc, etc. I can just guess about the email going back and forth in Illinois about the "Amateur Radio" versus "Ham Radio" wording on the current plates.

OK, so you're *still* not happy and you want to rouse the troops and get a special, free plate made. When I passed PRB-1 to protect our rights statewide to have antennas I tried to rouse the troops too. I polled the legislators to get an idea of how many hams bothered to send an email to their representative. My count was a whopping 120-150 across ALL the legislators and unfortunately about 10% of those threatened physical harm if they did not vote for the bill! I learned my lesson and have never done that again. Now I have trusted individuals send specific emails when I need support to pass or kill a bill.

So, I would currently rather save our political capital to kill or pass bills that directly affect our ability to operate like the ones I

killed that would have made it illegal to use a mobile rig this past session.

I'll leave you with some thoughts:

1. If you are willing to purchase the 5,000 blank amateur radio plates that's wonderful! But be prepared for all the hate mail and threats you get from the current people who pay $8 for amateur radio plates and now have to pay $40. Also be prepared for the hate mail and threats because they didn't like your design or the wording.

2. If you want to pursue this with your legislators, that's wonderful too! But be aware that might cause some of them to look at the numbers on the current plates and decide that they should lump the current amateur radio plates with the other organizations that buy less than 1,000 plates and then kill off the current plates. In that case, as above, be prepared for all the hate mail and threats.

3. If you can get enough people to email me that they support this effort and want me to pursue it and would be willing to call and email their legislators with well thought out remarks and not threaten them, then as your ARRL representative I'll go for it! Currently I get 0-2 emails a year about this. Yours is the first in two years. I get about 100 a year on HOA CC&Rs.

Lastly, if you think you can do better than me as the Indiana ARRL SGL, then go for it! Just be aware that on good years with almost nothing to do I spend 300-400 hours doing this job watching the bills, talking to legislators, visiting the statehouse, and answering the hate mail I get for not making anything happen about HOA CC&Rs, making amateur radio the state hobby, etc, etc. This can be quite a thankless job...

Thanks!

3005. RE: [IndyHamRadio] Re: [Inares] Fw: RE: Amateur Radio Plates

Yahoo group: IndyHamRadio
Date: 2012-04-25 07:25:01 UTC
From: ka9qjg
Topic: 3003 Message: 3005

I would like to Add and I agree with David , in 1991- 2-3 QTH Hammond Indiana , I was arrested 4 Times for having a Scanner in My Veh along with My Ham Radios , I had and have Ham Plates After Being found Not Guilty in Court because as Lic Hams We are . They made it a Personal Thing to go after Me because My Lawyer the X City Judge Embarrassed them. So I was arrested a Few more times and harassed over having a Scanner,,,, Veh Towed Damaged Equipment Wrist Injuries .

Well I finally changed lawyers and Became Friends with the Assistant Chief of PD Who was interested in Ham radio, And Others Because I had a Law Enforcement background. ON Sept 5 2011 The City offer a $10.500 Out of Court Settlement which I took , I have Never had any more Problems,,, Still have My Scanner and ham equipment and Friends With the Older PD Including the Chief ,,, I am also Friends with KC9RP Hap Holly of the RAIN Report , We talked numerous times about this and He wanted to do a Amateur Radio Newline Report about it , But I felt what happened to Me was made Personal and Not actually against Ham Radio , I declined thinking it may cause My Fellow Hams Problems .
So to Put this back on Topic ,,,,I thought it would Be Nice to Have some type of Emblem on our Indiana Plate for Amateur Radio , That way if a Law Enforcement Officer New the Exemptions with the Indiana Scanner Law and saw any strange looking Ant,, Etc and Amateur Radio Plate He Might not bother us.

I contacted the State of Indians BMV And was Sent the Actual copy of Blueprints to Design a Amateur Radio Plate , I discussed this with a Few Indiana Hams and Most said are You NUTS ,, We get a Plate for $ 8.00 and You want just us to pay $40.00 for a logo . So I gave up on that idea.
I do agree that YES we should for all the Service We are able to and do Offer try and get the State to Give us a Break . I always say the worse thing you can hear on a Scanner is Your Name and Plate , I Listen and Never have I heard any Law Enforcement officer run the plate as a Ham Plate they See the Numbers Etc and call it a Specialty Plate ,,, Which does NOT Come back on file ,,They have to Be smart enough to run it as a AR Plate for the info to come back Most do not know that .

As far as the Indiana Scanner Law Please Carry a Copy of that and a valid amateur Radio Lic Some still may not care.
PS I think our Indiana Scanner Law should Be like Most States including il where I Worked in Law Enforcement it is NOT illegal to be in possession of a Scanner unless you are using it in the Commission of a Crime then it is upgraded to a Felony.

73 Good Luck with this any way I can help please let me know I have been a ham for Over 30 yrs and have a 2 220 and 440 Repeaters on the Air in N/W Indiana NO Club NO DUES Open Just use a Little Common sense ,,,,,And David

N9KT Thank You for all the Hard Work supporting and making this Wonderful Hobby Better

Don KA9QJG

Subject: [IndyHamRadio] Re: [Inares] Fw: RE: Amateur Radio Plates

I can speak to this a little since I have been the Indiana ARRL SGL for many years and have talked to numerous legislators and the BMV about this.

"Every Tom, Dick and Harry in this state has some special license plate". Absolutely true, and every Tom, Dick, and Harry pay an extra $40 per plate per year for the privilege of having that special license plate (some plates a few dollars more and some a few dollars less).

However, many years ago we did push through a special deal from the Indiana government. In Indiana, you can get callsign plates for just $8! http://www.in.gov/bmv/2406.htm That is *way* lower than any other state. Before we got this deal, we used to have to order a vanity plate and it cost us $48!

OK, so you're still not happy and want a plate with a special amateur radio seal on it? OK, it's a simple matter of economics! To get a specialty plate a club or organization must pay in advance for 5,000 blank plates with the specialty seal to be made (they get a kick back as the plates are sold). Even after that if you don't sell at least 1,000 a year, the BMV will drop your organization because it's not worth their time. About 6 years ago I had the BMV run a search on the current number of $8 amateur radio callsign plates. Guess what? There were less than 1,000 amateurs statewide taking advantage of our current callsign plates! I won't even go into the issue that most amateurs can't seem to agree on anything and some brave soul/group would need to come up with a amateur radio license plate design and seal and then take the heat because someone else wanted a tower on the design or an FT-9000 or the ARRL logo, etc, etc. I can just guess about the email going back and forth in Illinois about the "Amateur Radio" versus "Ham Radio" wording on the current plates.

OK, so you're *still* not happy and you want to rouse the troops and get a special, free plate made. When I passed PRB-1 to protect our rights statewide to have antennas I tried to rouse the troops too. I polled the

legislators to get an idea of how many hams bothered to send an email to their representative. My count was a whopping
120-150 across ALL the legislators and unfortunately about 10% of those threatened physical harm if they did not vote for the bill! I learned my lesson and have never done that again. Now I have trusted individuals send specific emails when I need support to pass or kill a bill.

So, I would currently rather save our political capital to kill or pass bills that directly affect our ability to operate like the ones I killed that would have made it illegal to use a mobile rig this past session.

I'll leave you with some thoughts:

1. If you are willing to purchase the 5,000 blank amateur radio plates that's wonderful! But be prepared for all the hate mail and threats you get from the current people who pay $8 for amateur radio plates and now have to pay $40. Also be prepared for the hate mail and threats because they didn't like your design or the wording.

2. If you want to pursue this with your legislators, that's wonderful too! But be aware that might cause some of them to look at the numbers on the current plates and decide that they should lump the current amateur radio plates with the other organizations that buy less than 1,000 plates and then kill off the current plates. In that case, as above, be prepared for all the hate mail and threats.

3. If you can get enough people to email me that they support this effort and want me to pursue it and would be willing to call and email their legislators with well thought out remarks and not threaten them, then as your ARRL representative I'll go for it! Currently I get 0-2 emails a year about this. Yours is the first in two years. I get about 100 a year on HOA CC&Rs.

Lastly, if you think you can do better than me as the Indiana ARRL SGL, then go for it! Just be aware that on good years with almost nothing to do I spend 300-400 hours doing this job watching the bills, talking to legislators, visiting the statehouse, and answering the hate mail I get for not making anything happen about HOA CC&Rs, making amateur radio the state hobby, etc, etc. This can be quite a thankless job...

Thanks!

From: Brian
Topic: 3003 Message: 3007

I read all that, but I am still unclear as to what changes Duane is wanting to see on the license plate. Other than a callsign, what is he wanting to see on the plate? I guess I also don't understand what changing the plate format has to do with the IDHS and its relationship with Indiana radio amateurs.

Is there a website setup where I can do some further reading on this?

David

Thanks for the information, and put me down as one Indiana ham that is happy with his $8.00 Amateur Radio plate. I do not want to pay more than that for a new plate, I'd prefer to pay less, but that's just how I operate...I'm a QRPer. <heheh>

Frankly if the cost of a Amateur Radio plate were to go up, I would probably just forget about it. I can always get some of those stick on letters and put it on my bumper.

Thanks for your work with the Indiana State Legislature, I appreciate it.

3009. Re: [IndyHamRadio] Re: [Inares] Fw: RE: Amateur Radio Plates

Yahoo group: IndyHamRadio
Date: 2012-04-25 13:36:22 UTC
From: Zack Widup
Topic: 3003 Message: 3009

Here in Illinois the amateur radio plates were considered "service plates" at one time and were much cheaper than the regular license plate fees. Now they are the same as everyone else's fees but at least they're not more.

I do hope they change the "Ham Radio" on the side to "Amateur Radio." I'm about due for some new ones anyway, my old ones are getting pretty beat up.

Subject: [D-STAR_23cm] Getting Started in D-STAR class at Dayton

There are many new D-STAR users and we can help them get the most out of D-STAR.
 DSTARinfo.com will be hosting a class during Dayton Hamvention 2012 to help those new to D-STAR learn the basics and how to experience all of the features and capabilities of D-STAR.
If you are going to Dayton Hamvention this year and are a new D-STAR user or know someone who could benefit from a comprehensive D-STAR class for new users, here is the info.

The three hour class will be held on Friday morning from 9:00am to 12:00 noon at the Drury Inn Ballroom, 6616 Miller Lane, conveniently located near many of the Hamvention hotels. The class will be given by experienced D-STAR instructors who have conducted D-STAR training across the country. The cost of the class is $25.00 and advance registration is required.
All participants will receive full course materials and a chance to win an Icom ID-31A handheld radio.

Register by this Friday, April 25th, and receive a special edition t-shirt at the class.

Please pass along this information to anyone planning to be at Dayton and could benefit from the exciting D-STAR technology. To register, go to www.DSTARinfo.com/IC12.

3014. Re: Amateur Radio license plates

Yahoo group: IndyHamRadio
Date: 2012-04-27 01:51:19 UTC
From: kc9brz
Topic: 3014 Message: 3014

David/N9KT, your analysis and conclusions are spot on. I agree.
We already have a workable arrangement in Indiana.

The only way I can see to possibly improve upon it, is IF the
Indiana BMV doesn't already have some mechanism in place to
prevent imposters from obtaining a license plate with someone
else's call sign, either through the vanity plate system or
the ham radio $8 arrangement. All it would take would be an SOP
for the vanity plate person (and whoever has oversight
for the $8 ham plates) at the BMV to go to QRZ.com or ARRL.com
and look up the call sign to see that the name and address match.
I'm sure some hotshot could even program it in to their system for
an automatic lookup.

If, out on the street, or at an "incident" a car driver/owner wants
to demonstrate or certify to a law enforcement officer or other
authority that he is a licensed amateur radio operator, he/she can
keep a copy (or the original) of his FCC license in his/her wallet.

In case of "incidents" or whatever situations where hams
are used in some official ARES/RACES or EmmComm capacity, I would
imagine there are other credentials that need to be presented
in addition to just an FCC license, anyway.

If the car license plate is intended to be used as some sort of a
radio license indicator or ID (which I kind of disagree with up
front), then hopefully the officer knows the "format", but if the
officer is unaware of call sign formats, the officer can pull up
the license plate number/registration on the computer in their car
(or radio for a check) to verify that it is indeed one of the
$8/year amateur radio plates. That capacity is already there, no?

I see the license plate thing, even the $8/year current arrangement
which is a variation on a vanity plate, as more of a club or lodge
ring, or secret handshake, with which you identify your "brothers."
Like wearing a handy-talkie on your belt. You have an opportunity
to talk-shop with the person.

Posted by: "David Spoelstra" davids@... davidspoelstra
Date: Tue Apr 24, 2012 11:30 pm ((PDT))

I can speak to this a little since I have been the Indiana ARRL SGL
for many years and have talked to numerous legislators and the BMV
about this.

"Every Tom, Dick and Harry in this state has some special license plate". Absolutely true, and every Tom, Dick, and Harry pay an extra $40 per plate per year for the privilege of having that special license plate (some plates a few dollars more and some a few dollars less).

However, many years ago we did push through a special deal from the Indiana government. In Indiana, you can get callsign plates for just $8! http://www.in.gov/bmv/2406.htm That is *way* lower than any other state. Before we got this deal, we used to have to order a vanity plate and it cost us $48!

OK, so you're still not happy and want a plate with a special amateur radio seal on it? OK, it's a simple matter of economics! To get a specialty plate a club or organization must pay in advance for 5,000 blank plates with the specialty seal to be made (they get a kick back as the plates are sold). Even after that if you don't sell at least 1,000 a year, the BMV will drop your organization because it's not worth their time. About 6 years ago I had the BMV run a search on the current number of $8 amateur radio callsign plates. Guess what? There were less than 1,000 amateurs statewide taking advantage of our current callsign plates! I won't even go into the issue that most amateurs can't seem to agree on anything ...
========== end quote ==========

Well, they don't have anything that extensive, but on the website it says, "You must present a copy of your FCC license at a branch when you first order this plate." So that should help!

They are Supposed to Have You produce a Valid Lic But Some Do NOT,, After I gave up on the Idea of Trying to Get the State to Put a Logo ETC And Amateur or Ham Radio on the Plate , Then found out the Increase in Cost,,, I dropped the Idea BUT I still feel it is Important that if You Have a Bunch of Ants Scanners and Other Communications it is a Good Idea that a Law Enforcement or Someone at a Emergency Scene Sees Something that Identifies Who you are ,

So What I have been doing for yrs I just got a Lic Plate Holder This is an Example http://tinyurl.com/86w5cy6 Put the New Plate on the Back Painted over the Yr and Exp date on the Old one and put that in the Front .

73 De Don KA9QJG

PS the Main thing I see in this That it is a Personal Choice We have a Hams to Decide if We even want the Ham Plate in the First Place , as Everyone knows With all the Smart phones and Computers Our Info is only a Mouse click away .

On my Motorola Droid Razr, this app only uses about 3/4 of the screen. I've seen this before with a few other apps. Apparently, these apps don't automatically re-size themselves to fit the resolution and aspect ratio of the phone's screen.

This app accesses the QRZ database, so it's subject to whatever inaccuracies exist there (Fred does a good job, but his data always lags the FCC's data). The app gives you access to the email address and some biographical info from your QRZ listing which could be useful.

I have another Android callsign app that apparently accesses the FCC database instead. One nice feature of that app is that it makes the address into a link to the map app which the QRZ app does not do.

3023. Indiana QSO Party, Saturday, 5/6, Noon (EDT)

Yahoo group: IndyHamRadio
Date: 2012-05-05 16:46:16 UTC
From: Mark Thompson
Topic: 3023 Message: 3023

----- Forwarded Message -----

Date: Fri, 4 May 2012 13:18:56 -0400
From: "Mel Crichton" <kj9c@...>
Subject: [InHam] INQP tomorrow
To: "INHAM" <inham@...>, "SMC" <SMC@...>
Cc: W3ML <w3ml@arrl.org>, W0AG Mike Murray <w0ag@...>

Tomorrow at 1600 UTC (noon EDT) starts the 12 hours of the Indiana QSO Party.
There will be lots of Indiana stations on (see the activity map at www.hdxcc.org/inqp), but if you're not on the map yet, don't worry...
You can still join in the fun. (take a look at the rules for exchange info, etc)

Pay special attention to the handful of mobiles and rovers who will be scurrying from county to county to activate "the rare ones"....
many will be in a county for no more than 30 minutes, so don't put off working them.
Many will be operating on 20-40-80 meter CW to give as many folks as possible a shot.

If you call CQ on phone, be sure to ask occasionally for "mobiles only please" as rover/mobile signals are often much weaker than others.
And it might be a new county for you.

Even if you make but one contact, please send in a log....
Tim N9LF is a wizard at deciphering electronic logs, so you can even use Excel (as long as the QSO info is there).
If three or more from the same Indiana club send in logs, the club is eligible for the top club plaque.
(note... HDXCC is not eligible and SMC is not an Indiana club).

Hope to work a lot of folks from the Midwest tomorrow.

Mel KJ9C

http://www.hdxcc.org/inqp/rules.html
CQ INQP CQ INQP
Sponsored by HDXCCthe Hoosier DX and Contest Club

2012 Indiana QSO Party Rules
 Objective: For Amateurs worldwide to contact as many stations in Indiana as possible on the 160, 80, 40, 20, 15 and 10 meter Amateur bands.

 Date and Contest Period: Contest starts at 1600 UTC Saturday and ends at 0400 UTC Sunday the first full weekend of May. (Saturday noon to midnight EDT or 11am to 11pm CDT.) For 2012, this is May 5-6. All stations may operate the full 12- hour period.

 Entry Categories:
 Single-operator (High Power, Low Power or QRP). One person performs all logging, spotting, and operating functions.

Low Power is transmitter output of 100 watts or less.
QRP is transmitter output power of 5 watts or less.
Multi-operator single transmitter (Multi-Single). Only one signal is permitted on the air at any time.
Multi-Operator Multi-transmitter (Multi-Multi). Fixed stations (only) may operate without limit on the number of operators, transmitters or signals per band.
Mobile. Mobile is defined as a self-contained single or multi-operator station, capable of legal motion (land, water or air), motion optional. A mobile station that at any time uses a larger antenna incapable of being used in motion is considered a rover (see below).
Portable. A single transmitter station set up in a temporary location with temporary antennas (Field Day style). Portable stations may be either single or multiple operator.
Rover. A portable, or a mobile station using larger (non-mobile) antennas, that operates from more than one location.
A portable station may move (in entirety -- antennas included) to a new county or county line, thereby becoming a rover.
Rover stations may be worked again when they change counties (same as mobile stations).
Operation while mobile is permitted.
A county line mobile, portable, or rover may operate from only one or two counties at a time. In other words, three and four county operations are not allowed.
Multi-Multi entrants may transmit any number of signals simultaneously. All others may transmit only one signal on the air at any given time.
There is no "Assisted" category. Therefore, stations using spotting assistance shall enter as Multi-Single or Multi-Multi. Self-spotting is not permitted.
Fixed stations must enter as Single-operator, Multi-Single or Multi-Multi only.

Contest Exchange:
Indiana stations send RS(T) plus Indiana county.
Non-Indiana stations in the USA and Canada send RS(T) and state, province or territory.
All others (DX) send RS(T) only or RS(T) plus "DX".

Scoring:
QSO points:
Count one point for each complete two-way phone QSO.
Count two points for each complete two-way CW QSO.

Stations may be worked once in each mode (CW/phone) on each band (160, 80, 40, 20, 15, 10). The same fixed station could theoretically be worked twelve times. Exception: Mobile and rover stations may be worked in each county of operation. For example, you may rework the same mobile station in both modes on every band every time the mobile moves to a new county.
Stations on county boundaries may be worked for multiple county credit (stations need not physically move to declare a new county). Contacts with such stations should be logged as multiple QSOs. For example, a contact with a mobile parked on the boundary between two counties should be logged as two QSOs, one for each county.
Non-Indiana stations may work only Indiana stations.
Repeater, cross-band and cross-mode contacts are not allowed.

Multipliers:
Non-Indiana stations:
The 92 Indiana counties (see Section 9).
Indiana stations:

The 92 Indiana counties (see Section 9).
The other 49 U.S. states (District of Columbia counts as Maryland).
The 13 Canadian Provinces/Territories: NB, NS, QC, ON, MB, SK, AB, BC, NT, NL, YT, PE and NU.
Multipliers count once per mode (i.e. once on CW and once on phone). This means you can double your possible mults by working both modes.
Indiana stations may work DX stations for QSO point credit, but there are no DX multipliers.

Final Scoring:
Multiply QSO points by total multipliers.

Example #1: KX9IO (in Indiana) has 354 non-duplicate CW QSOs with stations in 39 states/provinces and 27 Indiana counties and 292 non-duplicate SSB QSOs with stations in 41 states/provinces and 32 Indiana counties.
Total score = ((354 x 2) + 292) x (39 + 27 + 41 + 32)
Total score = 1000 x 139
Total score = 139, 000
Example #2: WX5ZR (outside Indiana) has 103 non-duplicate CW QSOs with stations in 24 Indiana counties and 42 non-duplicate SSB QSOs with stations in 12 Indiana counties.
Total score = ((103 x 2) + 42) x (24 + 12)
Total score = 248 x 36
Total score = 8928
Club Competition:
In addition to individual awards, there is an award for the Indiana Amateur Radio Club whose members turn in the highest total aggregate score.
Clubs must be legitimate radio clubs, meeting FCC requirements for club licensing. Clubs need not have a club license or be members of the Indiana Radio Club Council to qualify. The sponsor of Indiana QSO Party, currently the Hoosier DX and Contest Club, is not eligible for this award.
Logs turned in by a club's members must be for contacts made from within the state of Indiana for the Indiana QSO Party.
Club members must CLEARLY indicate only one club affiliation when submitting logs. Cabrillo format logs should show club affiliation in the log header lines. Submissions using other log formats should be suitably marked.
To be eligible for the club competition award, at least three club members must participate. One of the following conditions must be satisfied:
at least three club members submit individual logs meeting the above requirements for single operator logs, or
the club submits a single log for a multi-operator single transmitter (multi-single) station with at least three club members shown as operators, or
the club submits a combination of single and multi-single station logs to meet the minimum participation requirement.
It is not necessary for a log to be from a station using a club's call sign, although the activation of club stations is encouraged.

Awards:
The top scoring fixed station (high power, low power, and QRP), portable, rover, and mobile in Indiana and the top scoring station outside Indiana will receive plaques.
Plaques for the top Indiana Multi-Op and Multi-Multi entries may be awarded if activity warrants.

Plaques may also be awarded for top single operator entries from W1 and W7 call areas (New England QSO Party and 7QP).
Sponsors for additional plaques are always welecome. Contact HDXCC for additional information.
The top scoring club (aggregate score of three or more members' logs from Indiana operations) will receive a plaque.
Certificates for each entry category, each Indiana county, each state/province/territory and each country will be awarded where significant effort or competition is evident.

Log Submissions:
Computer generated logs must be submitted as an ASCII text file with Cabrillo format strongly preferred. Logs may be sent via e-mail to inqp@.... Please name both the log file and your summary sheet file with your call (e.g., KJ9D.SUM, KJ9D.LOG, etc.).
Paper logs can be submitted by mail to HDXCC, c/o Mike Goode N9NS, 10340 Broadway, Indianapolis, IN 46280-1344.
Logs should be submitted no later than June 15, 2011.

Suggested Frequencies:
CW: 1.805 MHz and 30 kHz up from the band edge on 80-10 meters. A window for only mobiles to call CQ should be observed from 35 to 40 KHz up.
SSB: 1.845, 3.820, 7.190, 14.250, 21.300 and 28.400 MHz.
Try 160 meters at 0200 UTC.

Sent: Sunday, May 13, 2012 2:28 PM
Subject: [D-STAR_23cm] Dayton Hamvention® - D-STAR Across America

All,

On Friday evening, DSTARInfo and Icom will be hosting D-STAR Across America (and everywhere else).

We've got a pretty great lineup of keynote speakers and we are going to have a number of additional speakers representing many different aspects of D-STAR in Amateur Radio.

D-STAR Across America
Friday, May 18th, 6:30 – 9:00pm -
Drury Inn (Ballroom) - 6616 Miller Lane - Dayton, OH

Agenda
o Ray Novak N9JA –History of D-STAR.
Ray explains many of the decisions that were made as the D-STAR protocol was developed. AMBE, GMSK, routing are just a few of the subjects that Ray will talk about.

o Ken Adkisson WB4FAY - MonLink and DPlusReport for the users.
I think that Monlink is one of the lesser known repeater add-ons, but one of the most functional pieces of the D-STAR environment.
If you have net on your repeater, then DPlusReport makes being a Net Control, a piece of cake.

o David Lake G4ULF – David will discuss the current state of the G4ULF software and also let us know future directions of the project.

o We've got a number of more speakers that we are lining up, many of which will be having announcements at Dayton (which means if I tell you now, I'd have to kill you!)

o Giveaway - Icom IC-80AD

We'll have some light snacks at the gathering, but you may want to grab a quick bite on the way over.

We're starting a little earlier than normal to fit everyone into the schedule.

What we need from YOU. What we'd like for you to do is to send us some of your D-STAR pictures.
A picture of your group, repeater, activities, anything and everything D-STAR.

We’ll be showing these during breaks and during the Hamvention, we want to show the world the exciting story of D-STAR.

Please send your photos to info@...

And please make sure that you drop by the D-STAR Info booth in Audio Alley and say hello.

Ed WA4YIH

Subject: W9ICE (VHF port C)

We will be linking the VHF port of our D-STAR system here in Indy to reflector 38C (Dayton Hamvention) starting Thursday morning until Sunday evening.

It will be done via the Mon-Link program so if anyone needs to use the VHF side of the system
during that time for other Q's ... just unlink it !!

It will reconnect automatically back to 38C when it is left unused for a period of time.

73's
Dale (WB9YCZ)

3031. W9IMS is on the air

Yahoo group: IndyHamRadio
Date: 2012-05-27 14:14:31 UTC
From: Rhonda
Topic: 3031 Message: 3031

W9IMS is on the air! Look for us on 7.240, 18.145 and 14.255. If you are in the Indy area and would like a 2 meter contact, give us a shout on 146.520. This is race day and the last day to work us for this race.

This is the special event station for the Indianapolis Motor Speedway.

Hope to hear you on the air!

Rhonda

3036. Equipment available from silent key

Yahoo group: IndyHamRadio
Date: 2012-06-01 14:58:32 UTC
From: Ken Bandy (KJ9B)
Topic: 3036 Message: 3036

I received the following listing of gear available for sale from the wife of a silent key located on the northeast side of Indy. If anyone is interested, please contact me directly at kj9b at arrl.net or by phone at (317) 446-3312, and I'll get you in touch with her.

---

1 ICOM IC-208H Radio (new in box) 144 & 440 MHZ
2 Relm MPU08B hand-held receivers 450-480 MHZ One is new in the box. The other is missing the antenna and charger.
1 Uniden Trunktracker III receiver 25-148 MHZ (scanner?)
1 Cushcraft “Ringo Ranger” Antenna
4 Magnet mount car antennas Mixed VHF & UHF
2 rolls RG-8 coax approx 60 ft and 25 ft.
2 CB Radios
1 Linear 27 MHZ ?
1 Short Wave Receiver, Radio Shack Portable
1 12 volt 7.5 amp battery eliminator

I would like to find someone who will take everything. I know the ICOM radio is $160 new. I will take $100 for it. Whoever is interested could make an offer on the rest. I am cleaning out the condo for sale and need to dispose of this equipment soon.

Thanks,
Ken, KJ9B

Dear Ricky: Who are you, and what is this link about?

Did you send this intentionally? Or did someone fake your email
address to it?

It looks spammish to me.

Ricky Baker, also known as Rick Baker, is N9EHQ, a ham who lives in central Indiana.

The link is spam. This sort of spam has been happening with great frequency lately. If you look closely at these spam messages, they almost always come from a yahoo.com email address. Yahoo's email servers have been hacked and the spam is being sent to email addresses gleaned from the hacked accounts.

I talked to Rick this afternoon by telephone. He was already aware of the problem I think because a Yahoo Group moderator had contacted him. Rick has already taken steps to address the problem and was very apologetic when I talked to him.

I have to work that station. Is there going to be a special QSO from them? Also where exactly in NM is this are you actually going to Roswell for the site.

Im most likely going to be running a portable station out of my backyard with my buddipole at 25ft for as long as I can.

3052. ARRL June VHF QSO Party, Saturday, June 9, 1800 UTC - Monday, June 11, 0300 UTC

Yahoo group: IndyHamRadio
Date: 2012-06-08 11:21:26 UTC
From: Mark Thompson
Topic: 3052 Message: 3052

http://www.arrl.org/june-vhf-qso-party

ARRL June VHF QSO Party Rules
1.Objective: To work as many amateur stations in as many different 2 degrees by 1 degree grid squares as possible using authorized frequencies above 50 MHz. Foreign stations work W/VE amateurs only.
2. Date and Contest Period: The second full weekend in June. Begins 1800 UTC Saturday, ends 0300 UTC Monday (June 9-11, 2012).
3. Entry Categories:
3.1 Single Operator.
3.1.1. Low Power
3.1.2. High Power
3.2 Single Operator Portable.
3.3 Rover. A rover is comprised of no more than two operators that moves among two or more grid squares during the course of a contest. An operator may perform any or all rover functions, but a driver's function shall be limited to driving the vehicle. Drivers may be switched out during the event. Any number of observers is also allowed, however observers may not perform any rover function at any time. Rover vehicles with only one occupant are allowed to perform all functions listed above.
3.3.1. A rover vehicle may transport only one station using a single call sign. An exception is provided for in "General Rules for All ARRL Contests" number 3.5 (Family Rule).
3.3.2. A rover may not operate with more than one call sign.
3.3.3. Rover vehicles must transport all the equipment, power supplies, and antennas used at each operating site.
3.3.4. Rovers MUST sign "rover" on Phone and /R on CW and digital modes after their call sign.
3.3.5. All Rovers are encouraged to adopt operating practices that allow as many stations as possible to contact them.
3.3.6. Rover operators may submit separate logs for single operator (fixed station) in addition to their rover entries. Rovers submitting a score for inclusion in a club competition must also include a secondary summary sheet indicating the portion of the score that counts for the club score if any of the QSOs submitted take place outside of their club's territory.
3.3.7. Rovers are permitted to use APRS. Rovers using APRS transmit only their call sign and position. Any multi-op station may access rover APRS data directly or via the Internet.
3.3.8. A rover may not make more than 100 QSOs with any other one rover.
3.4. Limited Rover. Same as the "Rover" class above, but operation is permitted only on the 6 Meter, 2 Meter, 220 MHz and 432 MHz bands. Output power limits shall be the same as those defined for the Single Operator Low Power category.
3.5 Unlimited Rover. Same as “Rover” class above, but Unlimited Rovers may use more than two operators and are exempt from rules 3.3.3 and 3.3.8.
3.5.1. Unlimited Rover scores may NOT be applied to a club score for Club Competition.
3.6. Multioperator:

3.6.1. Multioperator (Unlimited): Stations submit logs with more than four bands used.
3.6.2.Limited Multioperator: Stations submit logs with a maximum of four bands used. (Logs from additional bands used, if any, should be included as checklogs.)
4. Exchange: Grid-square locator (see April 1994 QST, p 86).
4.1. Exchange of signal report is optional.
5. Scoring:
5.1. QSO points:
5.1.1. Count one point for each complete 50- or 144-MHz QSO.
5.1.2. Count two points for each 222- or 432-MHz QSO.
5.1.3. Count three points for each 902- or 1296-MHz QSO.
5.1.4. Count four points for each 2.3 GHz (or higher) QSO.
5.2. Multiplier: The total number of different grid squares worked per band. Each 2 degrees by 1 degree grid square counts as one multiplier on each band it is worked.
5.3. Final score: Multiply the total number of QSO points from all bands operated by the total number of multipliers for final score.
5.4. Rovers only: The final score consists of the total number of QSO points from all bands times the sum of unique multipliers (grid squares) worked per band (regardless of which grid square they were made in) plus one additional multiplier for every grid square from which they successfully completed a contact.
5.4.1. Rovers are listed in the contest score listings under the Division from which the most QSOs were made.
6. Reporting:
6.1. Entries may be submitted as follows:
6.1.1. Electronic submissions in the Cabrillo format may be emailed to JuneVHF@...
6.1.2. Hand written paper logs or diskettes mailed to June VHF, ARRL, 225 Main St, Newington, CT 06111.
6.1.3. Web entries submitted via the web-based applet at: http://www.b4h.net/cabforms/
6.2. Entries that have been electronically generated must submit their log file in the Cabrillo file format. Paper print outs of electronic files are not acceptable substitutes.
6.3. Entries must be emailed or postmarked no later than 0300 UTC Wednesday, July 11, 2012. Late logs may be designated as checklogs only.
7. Miscellaneous:
7.1. Stations may be worked for credit only once per band from any given grid square, regardless of mode. This does not prohibit working a station from more than one grid square with the same call sign (such as a Rover).
7.2. Only one signal per band (6, 2, 11/4, etc) at any given time is permitted, regardless of mode.
7.3. Multi-operator stations may not include QSOs with their own operators except on frequencies higher than 2.3 GHz. Even then, a complete, different station (transmitter, receiver and antenna) must exist for each QSO made under these conditions.
7.4. Forms may be obtained by:
7.4.1. Downloading the form here.
7.4.2. Sending an SASE with 2 units of postage to June VHF Form Request, ARRL, 225 Main St, Newington, CT 06111.
8. Awards: Certificates will be awarded in the following categories:
8.1. Single Operator.
8.1.1. Top Single Operator Low and High power entry in each ARRL/RAC Section.
8.1.2. Top Single Operator Low and High power on each band (50, 144, 222, 432, 902, 1296 and 2304-and-up categories) in each ARRL/RAC Section where significant effort or competition is evident. (Note: Since the highest score per band will be the award winner

for that band, an entrant may win a certificate with additional single-band endorsements.) For example, if W1INF has the highest Single-Operator all-band score in the CT Section and his 50- and 222-MHz scores are higher than any other CT single operator's, he will earn a certificate for being the single-operator Section leader and endorsements for 50 and 222 MHz.
8.2. Top Single-Operator Portable in each ARRL/RAC Section where significant effort or competition is evident. (Single-operator Portable entries are not eligible for single-band awards.)
8.3. Top Rover, Limited Rover and Unlimited Rover in each ARRL Division and Canada where significant effort or competition is evident. (Rover entries are not eligible for single-band awards.)
8.4. Top Multioperator score in each ARRL/RAC Section where significant effort or competition is evident. (Multioperator entries are not eligible for single-band awards.)
8.5. Top Limited Multioperator in each ARRL/RAC Section where significant effort or competition is evident. (Limited multioperator entries are not eligible for single-band awards.)
8.6. Plaques, if sponsored, will be awarded in the following categories:
8.6.1. Top Overall Single Operator (both High and Low Power) scorers.
8.6.2. Top Overall Single Operator Portable scorer.
8.6.3. Top Overall Rover, Limited Rover and Unlimited Rover scorers.
8.6.4. Top Overall Multi-Operator scorer.
8.6.5. Top Overall Limited Multi-Operator scorer.
8.6.6. The leading scorer in each entry category for each ARRL Division, Canada, Mexico, and DX (non-W/VE/XE) station.
9. Other:
9.1. See "General Rules for All ARRL Contests" and "General Rules for ARRL Contests on bands above 50 MHz (VHF)"

3056. Free Amateur Radio Class

Yahoo group: IndyHamRadio
Date: 2012-06-15 14:05:10 UTC
From: Brian Murrey
Topic: 3056 Message: 3056

I just got my newsletter from the Midstate Amateur Radio Club and they are having another one day Technician class, open to the public. The date is Saturday August 11th. You can get the full details by sending email to secretary@... I think they are going to be using the ARRL Ham Radio License Manual. So if you know anyone interested in getting their FCC license for Amateur Radio, this would be a great place for them to start.

3057. 43 foot Vertical

Yahoo group: IndyHamRadio
Date: 2012-06-17 00:55:24 UTC
From: Brian
Topic: 3057 Message: 3057

Hey all you fans of the 43 foot vertical HF antenna. The July 2012 QST has another good article on this antenna. Pays particular attention to setting this antler up for use on some of the higher bands. Written by Joel Hallas W1ZR.

Also a good article on using compromise antennas, as well as an article on the old standby dipole.

If you are a ARRL member you can see this issue online at the ARRL website.

3058. 222mHz/902mHz activity

Yahoo group: IndyHamRadio
Date: 2012-06-24 18:49:28 UTC
From: n9aa
Topic: 3058 Message: 3058

Hi,
I'm curious as to the amount of 902/222mHz activity in the Indianapolis area and elsewhere. I'm in Kokomo, so there is no activity on those bands here, but have been considering getting rid of my IC-92AD and getting an Alinco DJ-G29T, which will share accessories with my DJ-G7T.

I enjoy operating D-Star, but no more than analog FM and I don't use any of the linking capabilities, aside from the statewide linking of the D-Star repeaters. The extra bands offered by the G29T might be intriguing.

So, what level of activity is present on these "alternative" bands? Any assistance would be appreciated.

73,
Scott, N9AA

Scott, there are a couple of 220 repeaters in the downtown Indy area, one on 224.8 (K9XV), and one at 224.98 (W9ICE). There is a weekly net on the 224.8 that is normally linked with the new 147.21 repeater.

The ICE group also has a 902 repeater with multiple receive sites. Check their web site at http://w9ice.com/bills_900_corner.htm for all the details.

Hi Scott,

Are you speaking of weak-signal work? I have worked K9MRI in most contests on 222 CW/SSB and I believe I have also worked him on 902 CW. He's the only station in Indiana I have worked regularly on 902.

Hi Zack,
No, not so much weak signal activity, although I find that interesting, but what I'm interested in right now is FM activity. Eventually, I wouldn't mind playing around with SSB/CW on the higher bands, but I'm still trying to round up the last 100 or so countries I need on HF.

I thought I saw you at Dayton. I should've come over and said "hello."

Scott,

Good question. I don't know what organization sponsors this hamfest, but there is an ARRL Forum at 11AM. I have no idea as to why there is no ARRL VE team going to be there for testing, but it is possible the event organizers just didn't want to have it this year. Not every hamfest has VE testing (ARRL or otherwise) but it does seem odd that one where the ARRL is present in some official capacity, is not having VE testing. VE are all volunteers, so maybe there was a conflict with finding enough VE's to have it.

From: Ray, K9DUR
Topic: 3068 Message: 3070

The Indianapolis Hamfest has not had VE testing for a couple of years. It was not because of a lack of VE's, it was due to logistics. There are no facilities at Camp Sertoma suitable to hold testing. When they have had testing there in years past, it was at an off-site location. Their off-site location became unavailable, & they could find no suitable alternative.

Now for the big news: There will be NO dealers at the Indianapolis Hamfest this year. Due to a ceiling collapse caused by the extended high temperatures, the commercial building is uninhabitable & will be for several months. The ARRL & the NWS are being moved to the tent, but there is no room for any of the other commercial vendors. I just got the call this evening telling me that they are refunding the fee I paid for my space in the commercial building.

Well the explains the no VE testing. Thanks Ray.

This weather pattern has been wreaking havoc all over the place, sorry
to hear about the commercial building collapsing.

Does this mean there will be no air conditioned place for hot hams to go?

Wow, that's unfortunate. Maybe it's time for the Indianapolis Hamfest Association to find a new location. Honestly, Camp Sertoma isn't an optimal location under the best of circumstances and without an actual building for people to find shelter in, there are going to be plenty of unhappy hams there if the weather doesn't break.

The lack of VE facilities and commercial vendors is too bad, and maybe a couple of good reasons to find a more suitable venue.

I'm not trying to criticize anyone involved with the hamfest or Camp Sertoma, but sometimes places just aren't right for an event anymore. Hara Arena is a prime example of a venue that has aged beyond being suitable for an event like the Hamvention, as evidenced by the sewage explosion a couple of years ago.

Thanks for all the great information everyone!!

Brian,

No, there will be no air-conditioned refuge from the heat this year. On the upside, today is supposed to be the end of the 100+ temps. Forecast for next Saturday is the mid-80's.

One other thing -- the restroom facilities were in the commercial building. Look for the flea market to sprout a bunch of the little green fiberglass shacks!

Okay, it seems that I misunderstood the situation with the commercial vendors somewhat. I received the following e-mail this morning:

Ray,

Thanks for clarifying our issue regarding VE testing at the Hamfest. Very well said.

As far as the loss of our commercial building, you have painted somewhat of an inaccurate picture. Yes, the building is not available, however, we have contacted the commercial vendors, and so far, about half of them have indicated that they will take space in the tent, which was not sold out. We feel that while some of the vendors will decline to attend, we will still have a number of vendors present to provide attendees with a good selection of merchandise. Please keep in mind that the loss of the building in no way effects the vendors already signed in the tent and the pavilion building, not to mention our outdoor fleamarket; the largest in the State.

Regards,

Mike, WA9FDO
General Chairman

3080. OT: The Hamvention of Fireworks in LaPorte - Public Show, Friday, August 17th

Yahoo group: IndyHamRadio
Date: 2012-07-11 05:19:14 UTC
From: Mark Thompson
Topic: 3080 Message: 3080

Every year there is a week long fireworks convention sponsored by PGI (Pyrotechnics International), http://www.pgi.org/convention/2012/

The fireworks industry & fireworks enthusiasts participate in the convention.

On Friday night, the last night of the convention there is an amazing public fireworks show which unlike anything you've ever seen before.

The show starts with the Super String which is several million firecrackers fused together and lit at one time.

Then the ground & aerial shows start and last from 1 - 1 1/2 hours.

The convention is held in a different city every year and this year will be in LaPorte, IN for the first time at the LaPorte County Fairgrounds.

The public show will be held on Friday evening, August 17th.

Seating usually sells out so I encourage you to buy your tickets well in advance.

You can buy tickets at:

http://www.michigancitylaporte.com/events/special-events/pgi

I've been to the Friday night public show at this convention several times and will be attending again this year.

Look forward to seeing some of you at the show. I'll be listening to 146.52 FM simplex.

Thank you very much for your explanation as to the use of the word "masturbatory" in your earlier message.

I agree with you 100% on your explanation. If the infrastructure goes down, we have no internet or anything else except the airwaves.

I spent many years in the South Texas Section. I held many appointments, there. I, too, sat through many hurricanes, including Katrina and Rita, and worked alot of emergency power ham radio. So, I know exactly what you are talking about.

My question to you was kind of a loaded one. I'm sorry, but, I felt it was important for you to bring your points to the fore.

Again, thank you for your candid explanation. We all can take heed.

☐
Hello Lou,

Here in south Texas, we had a group who was going
to provide internet links to distant EOC's, telling the served agencies that as

amateur radio operators, we would come through "when all else fails", during any emergency.

What they did was to put themselves into a position where if the internet were to fail, they would have to say, "I''m sorry but we amateur radio operators cannot do as we promised - because we lost our internet connection".

Many of us have no trouble realizing just how stupid and feckless that they would have hams appear to be - while making such shameful admission.

I made no comment about that, but only asked if I could be there with my videocam when they told the Sheriffs Department that all of their "when all else fails" promises as hams were only valid - for so long as the internet was still working.

When the internet is still up, one might ask where the advantage (and the point) is in filtering thier internet communications through some ham...

Well, there isn't of course, it would only slow things down when they need to be fast.

Duh.

Anyway, the videotape offer did it.

Since then, our ARRL DEC has explained that none of our EMCOM efforts would utilize the very network that we are there to provide an emergency alternative for.

We are just not that stupid any more - and are not interested in looking that way, either.

The folks who came up with the idea in the first place kind of dropped off of the radar, and we have not been treated to any of thier masturbatory logic since. - A net gain for South Texas EMCOM.

You can legitimize your amateur radio emcom operation the same way, thus shielding yourself from the shame of having to explain your failure as a ham - because you lost your internet connection.

Note that hurricanes blow through my location regularly. Here, EMCOM can literally be a life or death proposition, and we have discovered that our emcom group's reputation is of as much value as any of the equipment that we use.

Telling agencies that you are going to provide a ham radio service "when all else fails" - that later turns out to be internet dependent is not how you maintain a reputation as an emcom entity.

When you do something like that, it doesn't just
make you look stupid; it debases the reputation of all hams,
everywhere.

How many "Hams couldn't help after internet went
down" stories do you figure will have to come out in order to undermine the
reputation of all hams, everywhere?

You don't want to make your group and all other
hams look like a bunch of ignorant, feckless jerkoffs, do you?

Personally, I would appreciate it if you would
not.

Be a ham.

3084. Re: [IndyHamRadio] Re: [Skipnet] FW: [IN_PACKET] Statewide RACES Test

Yahoo group: IndyHamRadio
Date: 2012-07-16 15:43:11 UTC
From: Rick Nicholson
Topic: 3082 Message: 3084

What it sounds like to me is that they had an event where the hams not prepared for the incident and they didn't have enough collective knowlwge on how to resolve the issues at hand ...not to mention over selling themselves beforehand!!

What most hams in the country don't realize is that until a full rf system is in place AXIP is a useful tool to fill in the gaps in coverage. Anyone that would suggest that AXIP not be used in an emergency if it was available to make contact with the affwctred area that had no internet coverage, has no concept of emegency communications and does'nt need to be involved in such activities.

It's a ham that uses that logic, who looks like a fool, An emergency communications system must consist of many emlements to make it effective and the more hams can be educated on those elements the better prepared and proficient they become.
It is all too easy for hams to become set in their ways and criticize the things they don't find interesting or Do Not Understand!

It seems it's always easier for some to whine about it ,instead of educating themselves about the possibilities that are available to them and the ways to improve a system.

AXIP in Indiana is only being utilized on the hubs as an alternaitive way for packet users to connect betweens gaps of coverage , so that they can get use to using a statewide platform and to forward non-essential traffic such as all of the useless bulletins that hams like to forward and keep the rf side clear. AXIP is prone to failure just the same as rf, since most hams don't have emergency power and tornado proof towers. Just as the internet will not completly fail, If at worst there will be spotty failure and thats where hams and rf will shine.
 There are numerous loops throughout the fiber phone and cable networks as well as satellite links available in the US that a total failure is Almost impossible and anyone that is expecting a total internet failure will be sadly disappointed

Don't get me started on Texas!! and people looking Stupid!

□

Hello Lou,

Here in south Texas, we had a group who was going
to provide internet links to distant EOC's, telling the served agencies that as amateur radio operators, we would come through "when all else fails", during any emergency.

What they did was to put themselves into a position
where if the internet were to fail, they would have to say, "I''m sorry but we amateur radio operators cannot do as we promised - because we lost our internet connection".

Many of us have no trouble realizing just how
stupid and feckless that they would have hams appear to be - while
making such shameful admission.

I made no comment about that, but only asked if I
could be there with my videocam when they told the Sheriffs Department that all of their "when all else fails" promises as hams were only valid - for so long as the internet was still working.

When the internet is still up, one might ask where
the advantage (and the point) is in filtering thier internet communications through some ham...

Well, there isn't of course, it would only slow
things down when they need to be fast.

Duh.

Anyway, the videotape offer did it.

Since then, our ARRL DEC has explained that none of
our EMCOM efforts would utilize the very network that we are there to provide an emergency alternative for.

We are just not that stupid any more - and are not
interested in looking that way, either.

The folks who came up with the idea in the
first place kind of dropped off of the radar, and we have not been treated to any of thier masturbatory logic since. - A net gain for South
Texas EMCOM.

You can legitimize your amateur radio emcom
operation the same way, thus shielding yourself from the shame of having to explain your failure as a ham - because you lost your internet
connection.

Note that hurricanes blow through my
location regularly. Here, EMCOM can literally be a life or death
proposition, and we have discovered that our emcom group's reputation is of as much value as any of the equipment that we use.

Telling agencies that you are going to provide a
ham radio service "when all else fails" - that later turns out to be internet
dependent is not how you maintain a reputation as an emcom entity.

When you do something like that, it doesn't just
make you look stupid; it debases the reputation of all hams,
everywhere.

How many "Hams couldn't help after internet went
down" stories do you figure will have to come out in order to undermine the
reputation of all hams, everywhere?

You don't want to make your group and all other
hams look like a bunch of ignorant, feckless jerkoffs, do you?

Personally, I would appreciate it if you would
not.

Be a ham.

>>
>>
>>
>>FYI!
>>
>>Hello All
>>
>>The Indiana Department of
Homeland Security will be conducting a Statewide RACES test on Saturday July
21,2012.8:00am EST to 10:00am EST
>>
>>IDHS RACES will be accepting packet
messages during the test to W9SEM-7.
>>
>>The IDHS Ham team has a couple
of BPQ32 Packet hubs available and a couple of forwarding

nodes.
>>
>>There are also AXIP links from the hubs that may allow routes
to rf paths into W9SEM-7
>>
>>Here is a list of Hubs, frequencies, ports
and paths that will help your traffic routing.
>>
>>The Following have RF
paths only. (Type BBS and you will be forwarded to W9SEM-7)
>>
>>W9SEM-7
145.050 1200 baud Indianapolis In. no AXIP
>>W9SEM-7 223.600 9600 Baud
Indianapolis, IN.
>>W9SEM-3 145.050 1200 Baud Johnson County Forwarding
Hub-No AXIP
>>W9SEM-8 145.050 1200 Baud Jennings County Forwarding Hub-NO
AXIP
>>
>>The following have RF and AXIP paths to W9SEM
>>
>>KF9NU-7
145.530 1200 Baud Miami County AXIP Port 1, RF Port 3
>>N9UMJ-7 145.050
1200 Baud Lawrence County AXIP port 1, RF port 3
>>N9UMJ-7 223.600 9600
Baud Lawrence County AXIP Port 1, RF port 2
>>N9LYA-7 145.050 1200 Baud
Lawrence County AXIP PORT3, HF 10.151, 14.105,14.098,
>>AA9MM-2 145.010
1200 Baud Vanderburg County AXIP port 8 via Hubs
>>AA9MM-2 440.950 9600
Baud Vanderburg County AXIP Port 8 via Hubs
>>W6IDS-1 145.050 1200 Baud
Wayne County AXIP port 1, Winmor 7.0625, 14.111
>>
>>There are also more
BPQ32 and rf nodes that have acess to the hubs and may also have their own
paths to W9SEM.
>>
>>If your a node owner and have a path to any of the
nodes listed above please share the information with the rest of us in the
group, including frequency baud,county, Grid Square, modes,heigth, power and
gain of your station.
>>Even though it is a Statewide RACES test, there
are many node owners that don't have RACES in their county, but use their
equipment in times of emergency for both RACES and ARES.
>>
>>I would be

interested to see who can connect and what paths are useable.
>>
>>If you
would like to attempt a connect into W9SEM-7 or send a message to W9SEM-1 ,
Please include the information listed above and address the subject header
as INPACKET if you will not be representing a county RACES Team on test
day.
>>There will also be a login request so we can establish return paths
for mail distribution,
>>Please fill out that information as well.
>>
>>**You do not have to wait for the Statewide test to send a message
the hubs operate 24/7 and pre test attempts should be made to those that are
not familiar with the BPQ32 Hubs.
>>
>>* When You connect to W9SEM-7 or
any of the hubs, Be sure to type ? to see what features are available for
that particular hub.
>>
>>Feel free to check into the hubs anytime, The
hubs are open to all hams and are part of the Indiana Packet Network. Please
be considerate on test day and yield to RACES traffic during test
times!

Topic: 3082 Message: 3085

Yes! Absolutely correct! We must use every avenue we have. I agree with you. And, there is absolutely nothing wrong with using the Internet, and it is well known that here, we do not rely only on the Internet. As a matter of fact in most places in the US, hams do not do that. However, there have been some isolated cases that learned the lesson the hard way.

Here in Indiana, we have some super good emergency type communications going on, and if the internet can be used, and is needed, then so be it. If and when it goes down during an event, so be it. It will always end up that RF is what gets things done in the long run.

Subject: Re: [IndyHamRadio] Re: [Skipnet] FW: [IN_PACKET] Statewide RACES Test

What it sounds like to me is that they had an event where the hams not prepared for the incident and they didn't have enough collective knowlwge on how to resolve the issues at hand ...not to mention over selling themselves beforehand!!

What most hams in the country don't realize is that until a full rf system is in place AXIP is a useful tool to fill in the gaps in coverage. Anyone that would suggest that AXIP not be used in an emergency if it was available to make contact with the affwctred area that had no internet coverage, has no concept of emegency communications and does'nt need to be involved in such activities.

It's a ham that uses that logic, who looks like a fool, An emergency communications system must consist of many emlements to make it effective and the more hams can be educated on those elements the better prepared and proficient they become.
It is all too easy for hams to become set in their ways and criticize the things they don't find interesting or Do Not Understand!

It seems it's always easier for some to whine about it ,instead of educating themselves about the possibilities that are available to them and the ways to improve a system.

AXIP in Indiana is only being utilized on the hubs as an alternaitive way for packet users to connect betweens gaps of coverage , so that they can get use to using a statewide platform and to forward non-essential traffic such as all of the useless bulletins that hams like to forward and keep the rf side clear. AXIP is prone to failure just the same as rf, since most hams don't have emergency power and tornado proof towers. Just as the internet will not completly fail, If at worst there will be spotty failure and thats where hams and rf will shine.
 There are numerous loops throughout the fiber phone and cable networks as well as satellite links available in the US that a total failure is Almost impossible and anyone that is expecting a total internet failure will be sadly disappointed

Don't get me started on Texas!! and people looking Stupid!

Thank you very much for your explanation as to the use of the word "masturbatory" in your earlier message.

I agree with you 100% on your explanation. If the infrastructure goes down, we have no internet or anything else except the airwaves.

I spent many years in the South Texas Section. I held many appointments, there. I, too, sat through many hurricanes, including Katrina and Rita, and worked alot of emergency power ham radio. So, I know exactly what you are talking about.

My question to you was kind of a loaded one. I'm sorry, but, I felt it was important for you to bring your points to the fore.

Again, thank you for your candid explanation. We all can take heed.

73 and God Bless!

Subject: Re: [Skipnet] FW: [IN_PACKET] Statewide RACES Test

☐
Hello Lou,

Here in south Texas, we had a group who was going
to provide internet links to distant EOC's, telling the served agencies that as
amateur radio operators, we would come through "when all else fails", during any
emergency.

What they did was to put themselves into a position
where if the internet were to fail, they would have to say, "I''m sorry but we
amateur radio operators cannot do as we promised - because we lost our internet
connection".

Many of us have no trouble realizing just how
stupid and feckless that they would have hams appear to be - while
making such shameful admission.

I made no comment about that, but only asked if I
could be there with my videocam when they told the Sheriffs Department that all
of their "when all else fails" promises as hams were only valid - for so
long as the internet was still working.

When the internet is still up, one might ask where
the advantage (and the point) is in filtering thier internet communications
through some ham...

Well, there isn't of course, it would only slow
things down when they need to be fast.

Duh.

Anyway, the videotape offer did it.

Since then, our ARRL DEC has explained that none of
our EMCOM efforts would utilize the very network that we are there to provide an
emergency alternative for.

We are just not that stupid any more - and are not
interested in looking that way, either.

The folks who came up with the idea in the
first place kind of dropped off of the radar, and we have not been treated to
any of thier masturbatory logic since. - A net gain for South
Texas EMCOM.

You can legitimize your amateur radio emcom
operation the same way, thus shielding yourself from the shame of having to
explain your failure as a ham - because you lost your internet
connection.

Note that hurricanes blow through my
location regularly. Here, EMCOM can literally be a life or death
proposition, and we have discovered that our emcom group's reputation is of as
much value as any of the equipment that we use.

Telling agencies that you are going to provide a
ham radio service "when all else fails" - that later turns out to be internet
dependent is not how you maintain a reputation as an emcom entity.

When you do something like that, it doesn't just
make you look stupid; it debases the reputation of all hams,
everywhere.

How many "Hams couldn't help after internet went
down" stories do you figure will have to come out in order to undermine the
reputation of all hams, everywhere?

You don't want to make your group and all other
hams look like a bunch of ignorant, feckless jerkoffs, do you?

Personally, I would appreciate it if you would
not.

Be a ham.

73 DE Charles, N5PVL

So I have to ask...

Which can we count on to be more reliable in which circumstances?

RF or the public switched telephone network or the millions of Internets we have in place?

<sounds of popcorn being munched>

3087. Re: [IndyHamRadio] Re: [Skipnet] FW: [IN_PACKET] Statewide RACES Test

Yahoo group: IndyHamRadio
Date: 2012-07-16 16:49:52 UTC
From: WA5LOU Lou Everett, Sr
Topic: 3082 Message: 3087

If the infrastructure goes down, it will always be RF during the first few hours, especially. Been there - Done that!

Lay off the popcorn. It is hard to digest!

Lou Everett, Sr., WA5LOU

So I have to ask...

Which can we count on to be more reliable in which circumstances?

RF or the public switched telephone network or the millions of Internets we have in place?

<sounds of popcorn being munched>

>
>What it sounds like to me is that they had an event where the hams not prepared for the incident and they didn't have enough collective knowlwge on how to resolve the issues at hand ...not to mention over selling themselves beforehand!!
>
>What most hams in the country don't realize is that until a full rf system is in place AXIP is a useful tool to fill in the gaps in coverage. Anyone that would suggest that AXIP not be used in an emergency if it was available to make contact with the affwctred area that had no internet coverage, has no concept of emegency communications and does'nt need to be involved in such activities.
>
>It's a ham that uses that logic, who looks like a fool, An emergency communications system must consist of many emlements to make it effective and the more hams can be educated on those elements the better prepared and proficient they become.
>It is all too easy for hams to become set in their ways and criticize the things they don't find interesting or Do Not Understand!
>
>It seems it's always easier for some to whine about it ,instead of educating themselves about the possibilities that are available to them and the ways to improve a system.
>
>AXIP in Indiana is only being utilized on the hubs as an alternaitive way for packet users to connect betweens gaps of

coverage , so that they can get use to using a statewide platform and to forward non-essential traffic such as all of the useless bulletins that hams like to forward and keep the rf side clear. AXIP is prone to failure just the same as rf, since most hams don't have emergency power and tornado proof towers. Just as the internet will not completly fail, If at worst there will be spotty failure and thats where hams and rf will shine.
> There are numerous loops throughout the fiber phone and cable networks as well as satellite links available in the US that a total failure is Almost impossible and anyone that is expecting a total internet failure will be sadly disappointed

>>>Subject: [Skipnet] FW: [IN_PACKET] Statewide RACES Test
>>>
>>>
>>>
>>>FYI!
>>>
>>>Hello All
>>>
>>>The Indiana Department of
Homeland Security will be conducting a Statewide RACES test on Saturday July 21,2012.8:00am EST to 10:00am EST
>>>
>>>IDHS RACES will be accepting packet
messages during the test to W9SEM-7.
>>>
>>>The IDHS Ham team has a couple
of BPQ32 Packet hubs available and a couple of forwarding
nodes.
>>>
>>>There are also AXIP links from the hubs that may allow routes
to rf paths into W9SEM-7
>>>
>>>Here is a list of Hubs, frequencies, ports
and paths that will help your traffic routing.
>>>
>>>The Following have RF
paths only. (Type BBS and you will be forwarded to W9SEM-7)
>>>
>>>W9SEM-7
145.050 1200 baud Indianapolis In. no AXIP
>>>W9SEM-7 223.600 9600 Baud
Indianapolis, IN.

>>>W9SEM-3 145.050 1200 Baud Johnson County Forwarding
Hub-No AXIP
>>>W9SEM-8 145.050 1200 Baud Jennings County Forwarding Hub-NO
AXIP
>>>
>>>The following have RF and AXIP paths to W9SEM
>>>
>>>KF9NU-7
145.530 1200 Baud Miami County AXIP Port 1, RF Port 3
>>>N9UMJ-7 145.050
1200 Baud Lawrence County AXIP port 1, RF port 3
>>>N9UMJ-7 223.600 9600
Baud Lawrence County AXIP Port 1, RF port 2
>>>N9LYA-7 145.050 1200 Baud
Lawrence County AXIP PORT3, HF 10.151, 14.105,14.098,
>>>AA9MM-2 145.010
1200 Baud Vanderburg County AXIP port 8 via Hubs
>>>AA9MM-2 440.950 9600
Baud Vanderburg County AXIP Port 8 via Hubs
>>>W6IDS-1 145.050 1200 Baud
Wayne County AXIP port 1, Winmor 7.0625, 14.111
>>>
>>>There are also more
BPQ32 and rf nodes that have acess to the hubs and may also have their own
paths to W9SEM.
>>>
>>>If your a node owner and have a path to any of the
nodes listed above please share the information with the rest of us in the
group, including frequency baud,county, Grid Square, modes,heigth, power and
gain of your station.
>>>Even though it is a Statewide RACES test, there
are many node owners that don't have RACES in their county, but use their
equipment in times of emergency for both RACES and ARES.
>>>
>>>I would be
interested to see who can connect and what paths are useable.
>>>
>>>If you
would like to attempt a connect into W9SEM-7 or send a message to W9SEM-1 ,
Please include the information listed above and address the subject header
as INPACKET if you will not be representing a county RACES Team on test
day.
>>>There will also be a login request so we can establish return paths
for mail distribution,
>>>Please fill out that information as well.
>>>
>>>**You do not have to wait for the Statewide test to send a message
the hubs operate 24/7 and pre test attempts should be made to those that are
not familiar with the BPQ32 Hubs.

>>>
>>>* When You connect to W9SEM-7 or
any of the hubs, Be sure to type ? to see what features are available for
that particular hub.
>>>
>>>Feel free to check into the hubs anytime, The
hubs are open to all hams and are part of the Indiana Packet Network. Please
be considerate on test day and yield to RACES traffic during test
times!
>>>

Dick, Mike and all -

I want you to know that the ARRL Indiana Section Team appreciates the Indianapolis Ham Fest, and the enormous efforts in making it a success. Even with the main building situation, you still made it work for the joy and benefit for those attending.

We appreciate you having the ARRL Team, and consider it a privilege to have a table and the ARRL Forum at the Indianapolis Ham Fest.

We want to thank you for your hospitality, and wish you all the best in your preparations for next years Ham Fest.

73 and God Bless!

Lou Everett, Sr., WA5LOU

ALL,

I certainly want to thank everyone involved with working to set up the Indy Hamfest and to be sure my xyl wb8orr & myself both enjoyed this event.

We both know a little about all the team-work it takes administratively to operate hamfests since being involved with Fort Wayne for many years.

We have primarily worked the doors to the coliseum on Friday evenings and getting vendors & flea market people to their particular table(s). Then it repeats Saturday mornings, then out the door on Sunday afternoons.

We listen to complaints too, some valid, some not, with maybe a few misunderstandings in the process. We are reminded by the core staff that everyone is our customer and to treat them with due respect & consideration.

We do miss numerous forums and events in that process and are just one cog in the big wheel.

Thanks again to all those on your hamfest team,

Don KA9QWC & Cathy WB8ORR

From: Rappster
Topic: 3093 Message: 3093

EARS has a Link Communications RLC-3 repeater controller with 8 (yes, 8) radio cards for sale, as well as a Link Communications DVR-1 digital voice recorder. It has only slightly been used, and has had the internal battery replaced recently. I will put it on eBay soon unless someone contacts me in the next few days. Please pass the word to anyone who may be looking for a good, full featured controller. MSRP: about $4000. Make offer.

So I have to ask...

Which can we count on to be more reliable in which circumstances?

RF or the public switched telephone network or the millions of Internets we
have in place?

Sounds like fun! I actually have one of those around here somewhere. built it way back when they were one of TenTec's "new" products!!!

I'll have to dig deep and see if I can find it!

Bob and Mike,

I managed to get all my parts counted tonight and checked off the good old inventory sheet. Blew the dust off my soldering iron, found my glasses, and my magnifying loupe, and managed to get Phase One of 7 phases done tonight. It was the ever popular keying circuit and I am happy to report, the smoke test went well and no smoke was evacuated into the atmosphere tonight...but don't worry, there are plenty more opportunities for the letting of the smoke to come.

It's kind of relaxing with the smell of solder in the air.

Subject: Job Posting #580691 - Land & Mobile Radio Tech (Southern IN)

All:

I wanted to let you know that the Integrated Public Safety Commission has reposted a vacancy on the state job bank. IPSC is looking for qualified candidates to fill the role of a Land & Mobile Radio Technician. I have copied (and attached) the posting information below.

Anyone (internal or external) who is interested in applying can navigate to the online system through the following link: http://www.in.gov/spd/2333.htm .

Once in the PeopleSoft recruitment system, it is possible to search for the Job Posting ID # 580691.

Please feel free to forward this notice to others who you feel might be interested in this opportunity. This posting will close on August 5th.

Thanks,

Kim

[cid:image001.png@01CB4F47.9B493690]<http://www.in.gov/spd/>

Land & Mobile Radio Technician (Southern IN)
AGENCY: Indiana Integrated Public Safety Commission (IPSC)
JOB POSTING ID: 580691
APPLY BEFORE: August 6, 2012
LOCATION: Southern IN
BASE SALARY: $33,748.00
TO APPLY: http://www.in.gov/spd/2333.htm

HIRE SALARY:
If selected applicant is not licensed - position will be underfilled a level lower.
Hire/base salary for the lower level is: $26,702.00

JOB DESCRIPTION:

NOTE: Position will function primarily throughout southern half of the state.

Incumbent serves as a public safety radio technician, performing a wide variety of advanced in shop and field technical systems support duties; such as, maintenance and repair of public safety radio systems that include vhf transmitters and receivers, the statewide microwave network and a large fleet public safety mobile and portable two-way radios.

Incumbent is responsible for accepting call out 7/24 in response to outages that may involve assisting subordinate technicians with repair, retune and adjustment of microwave radios, VHF transmitters and receivers; and, resolving software/programming issues with mobile and portable two way radios. Also, instructs technicians in the use of sophisticated service monitoring and test equipment, and repair and maintenance of battery chargers and electrical circuits that support power to the statewide radio system.
RESPONSIBILITIES:

· Install, program and maintain mobile and portable two-way radios and/or the public safety microwave and related systems located at remote radio sites statewide.

· Align, test, program and maintain mobile/portable radios and related electronics equipment using a wide variety of state of the art test instruments.

· Provide daily problem resolution for various hardware and software problems related to microwave circuits and wide area networks utilized by many public safety personnel.

· Provide customer support, assisting where possible with technical questions related to operations of both the microwave and related public safety radio systems.

· Complete equipment maintenance records required by the Federal Communications Commission (FCC), and update computer generated data as needed.

· Perform preventative maintenance, using established testing procedures to ensure uninterrupted operation of the microwave and related radio systems.

· Assist in the design, configuration and implementation of telecommunications systems networks and structured cabling, including but not limited to multi-layer switches, routers, and VPN appliances, etc.

· Research, develop and initiate standardized testing procedures to ensure uninterrupted operation of the statewide 800MHz radio system and provide adequate telecommunications services to the department.

· Monitor and inspect backup generators, tower lighting controls, communications tower grounding systems, guy wire anchors and systems, general communications building and grounds conditions. Report any discrepancies to supervisory staff or engineering personnel for corrective action.

· Keep abreast of new technology by participating in continuing education through research, training, and review of industry technical manuals.

PREFERRED EXPERIENCE:

· Must possess a Federal Communications Commission (FCC) General Class Radiotelephone License, or an acceptable equivalent certification such as NABER, Certified Electronics Technician (CET), Society of Broadcast Engineers Certification (SBE) with ability to apply technical standards, assure compliance with F.C.C. Rules and Regulations. If selected applicant is NOT LICENSED – position will be underfilled.

· Technical diploma or Associates degree in electronics from an accredited technical school or college; or acceptable related work experience with demonstrated skills, knowledge and ability in communications and electronics. High school diploma or GED required.

· Understanding of computer operation and terminology, with an the ability to use sophisticated radio programming software, computer spreadsheets, databases, programming and retrieval of information using various specialized software tools.

· Knowledge of component level troubleshooting techniques and use of digital electronic diagnostic equipment.

· Knowledge of public safety land mobile radio systems and telecommunications

· Must have a valid Indiana driver’s license.

· Availability for after hour’s callout in support of the statewide public safety radio systems or other emergencies, as required.

· Working knowledge of the hazards involved with high voltage electronics equipment and applicable safety procedures.

· Ability to read, comprehend and interpret technical manuals and various schematic diagrams.

· Ability to communicate and relate with non technical personnel, technical support services and vendors. Both oral and written communications skills are necessary for this position.

· Ability to lift heavy equipment such as batteries and test equipment (up to 50 lbs.).

· Ability to travel to remote locations throughout the state which may include overnight stays.

· Ability to work alone and unsupervised.

3103. Executive Order (2012) authorizing government control of private communications

Yahoo group: IndyHamRadio
Date: 2012-08-01 16:46:01 UTC
From: N9NWO
Topic: 3103 Message: 3103

Did anyone see this coming?
Read through the order, http://www.whitehouse.gov/the-press-office/2012/07/06/executive-order-assignment-national-security-and-emergency-preparedness-#.T_sYsRJrreM.twitter, the provisions of the FCC to control common carrier and broadcast services. We are starting down a dangerous road.

US President Barack Obama quietly signed his name to an Executive Order on Friday, allowing the White House to control all private communications in the country in the name of national security.

President Obama released his latest Executive Order on Friday, July 6, a 2,205-word statement offered as the "Assignment of National Security and Emergency Preparedness Communications Functions." And although the president chose not to commemorate the signing with much fanfare, the powers he provides to himself and the federal government under the latest order are among the most far-reaching yet of any of his executive decisions.

"The Federal Government must have the ability to communicate at all times and under all circumstances to carry out its most critical and time sensitive missions," the president begins the order. "Survivable, resilient, enduring and effective communications, both domestic and international, are essential to enable the executive branch to communicate within itself and with: the legislative and judicial branches; State, local, territorial and tribal governments; private sector entities; and the public, allies and other nations."

President Obama adds that it is necessary for the government to be able to reach anyone in the country during situations it considers critical, writing, "Such communications must be possible under all circumstances to ensure national security, effectively manage emergencies and improve national resilience." Later the president explains that such could be done by establishing a "joint industry-Government center that is capable of assisting in the initiation, coordination, restoration and reconstitution of NS/EP [national security and emergency preparedness] communications services or facilities under all conditions of emerging threats, crisis or emergency."

"The views of all levels of government, the private and nonprofit sectors, and the public must inform the development of NS/EP communications policies, programs and capabilities," he adds.

On the government's official website for the National Communications Systems, the government explains that that "infrastructure includes wireline, wireless, satellite, cable, and broadcasting, and provides the transport networks that support the Internet and other key information systems," suggesting that the president has indeed effectively just allowed himself to control the country's Internet access.

In order to allow the White House to reach anyone within the US, the president has put forth a plan to establish a high-level committee calling from agents with the Department of Homeland Security, Pentagon, Federal Communications Commission and other government

divisions to ensure that his new executive order can be implemented.

In explaining the order, the Electronic Privacy Information Center (EPIC) writes that the president has authorized the DHS "the authority to seize private facilities when necessary, effectively shutting down or limiting civilian communications."

In Section 5 of his order, President Obama outlines the specific department and agency responsibilities that will see through his demands. In a few paragraphs, President Obama explains that Executive Committee that will oversee his order must be supplied with "the technical support necessary to develop and maintain plans adequate to provide for the security and protection of NS/EP communications," and that that same body will be in tasked with dispatching that communiqué "to the Federal Government and State, local, territorial and trial governments," by means of "commercial, Government and privately owned communications resources."

Later, the president announces that the Department of Homeland Security will be tasked with drafting a plan during the next 60 days to explain how the DHS will command the government's Emergency Telecommunications Service, as well as other telecom conduits. In order to be able to spread the White House's message across the country, President Obama also asks for the purchasing of equipment and services that will enable such.

The DHS now has control over ALL (as in everything private and public) communications systems in the U.S. by executive order signed by the president on 7/6/12.

>>> Did anyone see this coming?
YES!!!

I can remember, a couple of years ago, speaking with a person who was so excited to be on his way to install new repeater equipment (don't remember who or where). The great thing about the equipment is that it was "provided" by homeland security.

If THAT wasn't handwriting on the wall, then I don't know what it would have taken to get the message!

There is NEVER something for nothing!

Here?s a good way to find the W9I team on HF?they have been having some challenges today, fighting the bugs, the weeds, and the island in general. So they have been a bit delayed getting on the air. I suggest you use the Reverse Beacon Network to hunt them down. It?s easy to use and full of information.

W9I is on the air.

7073 Khz, running CW at about 13 WPM

W9I is a special event station on Ernie Pyle Island celebrating his 112th birthday.

We're trying to get the Island qualified for the US Islands Award Program, we need 25 contacts.

Last time they were heard on the reverse beacon network was at 19:07Z in
Virginia and North Carolina.

There was a pretty wild storm blowing through here at about 19:30Z so
they may have had to shut down and run for cover.

Keep your eye on the Reverse Beacon Network.

3114. W9I Event Update

Yahoo group: IndyHamRadio
Date: 2012-08-04 22:45:57 UTC
From: Brian
Topic: 3114 Message: 3114

I just got a voicemail from W9DLK with the W9I group, they have left the island and gone into town for some dinner. They will be back on the air in a couple of hours. As soon as I have SSB freqs from them, I will post them.

The best way to find them is to use the Reverse Beacon Network. Click on the Main page and do a search for W9I. It shows the time and last freqs they were heard on.

3118. Fall VHF/UHF 6m Sprint, 2000 UTC Saturday, August 11 - 0000 UTC Sunday, August 12, 2012

Yahoo group: IndyHamRadio
Date: 2012-08-09 14:38:27 UTC
From: Mark Thompson
Topic: 3118 Message: 3118
Attachments: 1 described; binary payloads are missing from this source WARC

http://www.svhfs.org/sprints.html
Introducing the 2012 Fall VHF/UHF Sprints:

PRELIMINARY Revision 1. Change 50MHz times.

The Southeastern VHF Society is again sponsoring the Fall VHF/UHF Sprints. All amateurs are encouraged to participate, even if only in a small way. They are meant to get everyone on the air. The rules encourage rover, microwave operation and the casual operator new to VHF/UHF.

This year we are again using 6 digit grid squares and distance scoring on the Microwaves.

The contest is intended for single operator, single transmitter entries. However, if one wishes to introduce a newcomer to weak signal vhf/uhf operations, the sponsors of the contest reserve the right to allow such entries, if identified as such. In no case will there be more than 1 radio operator at one time. A second person can not serve as a “spotter” while the first operates. Operating categories are still Single Op and Rover.

Sprints are held on different days for each band except for the Microwaves (902 and up) that are held together. The operating time for each Sprint is short (like a sprint :-) and meant to compress the activity into a shorter time span.

At present we do not have any plaque sponsors. If you would like to sponsor a plaque for one of the Sprints please contact the Fall Sprints Chairman Bruce Randall NT4RT. NT4RT@....

While the rules for the Fall Sprints are set for 2012, we are always open to suggestions on how to improve them for the future. If you have an idea on how to make the Fall Sprints better for next year (different dates, times, rule change, etc.) please drop the Fall Sprints Chairman a note and help out.

Please notice that, except for rovers and the microwave sprint, the scoring is more like the ARRL June VHF contest now.
check the logs. Rover scoring is intended to encourage activation of many grids!

Note the changed date of the 50MHz sprint, August this year. Can we get some E skip? maybe?
Down East Microwave (downeastmicrowave.com) is again supporting the Fall Sprints by sponsoring two participation award drawings. The drawings will be made at the SVHFS Conference from the stations that turn in logs showing contacts in the 222 MHz Sprint and/or the
Microwave Sprint. One drawing for each. The two drawing winners will receive $100 gift certificates for DEMI products. You do not have to be present to win. The awards are being sponsored to encourage amateurs to get active on 222 MHz and the Microwave bands. Our thanks
to Steve and Sandra for their continued support!!

For details and up-to-date information about the Fall Sprints and the annual technical conference
the Southeastern VHF Society sponsors, please visit our website at This will allow computer programs to both generate the logs andhttp://www.svhfs.org/

73, have fun, and good luck!
Bruce Randall NT4RT
fallsprints@...
2012 Fall Sprint Chairman

2012 Fall VHF/UHF Sprint Rules:
1. Object:
as possible, using authorized amateur frequencies on the 50, 144, 222, 432 MHz.
Microwaves (902 MHz and above) are scored on distance.To work as many amateur stations in as many 2 X 1 degree grid squares2. Contest Period:2.1 The
UTC Sunday, August 12, 2012.50 MHz Sprint starts 2000 UTC Saturday, August 11, 2012 and ends 0000LOG is due by September 12, 2012.2.2 The
September 17, 2012.144 MHz Sprint will be from 7 PM to 11 PM local time on MondayLOG is due by October 17, 2012.2.3 The
September 25, 2012.222 MHz Sprint will be from 7 PM to 11 PM local time on TuesdayLOG is due by October 25, 2012.2.4 The
October 3, 2012.432 MHz Sprint will be from 7 PM to 11 PM local time on WednesdayLOG is due by November 3, 2012.2.5 The
time on Saturday October 13, 2012. The Microwave Sprint is one Sprint and
certificates will be awarded for highest total score. See section 4. below for
scoring.Microwave (902 MHz and above) Sprint will be from 7 AM to 1 PM localLOG is due by November 13, 2012. Exchange is 6 Digit Grid Square !!
3. Exchange: Call signs and Grid-square locator. Signal report optional.microwaves require the full 6 characters of the grid square. Such as EM94LV
4. Scoring:4.1 QSO Points:4.1.1. Count 1 point for each complete 50- or 144-MHz QSO.
4.1.2. Count 2 points for each 222- or 432-MHz QSO.
4.1.3. for each 902- or above contact, the distance in Km is the score for the
contact. “Tinylocator” from ON6MU, available on the internet, will be used to
verify distances.
4.2
Each 2 X 1 degree grid square worked counts as one multiplier.
4.3
sprint is scored separately.
produce the correct score.Multiplier: (Except for microwave) The total number of grid squares worked.Final Score (Except Microwave): Multiply QSO points by multipliers.

EachARRL June 2012 VHF contest scoring software will4.4
normal single operator in that grid. Please separate logs for each grid activated. The
final score is the sum of the scores for the individual grids activated.
grid must be activated to be a rover! ARRL scoring software will NOT work.Rovers Score:
Each grid activated is scored separately as if the station was aMore than one4.5
the final score. A station worked on another band is a new contact. If a rover moves
to a new grid he can be worked again for another contact. Rovers make a separate
log for each grid that is operated from. The sum of the individual logs is the
score.Microwave Final Score: The sum of the distance in kilometers for all contacts is5.
Reporting:
the each event. Only submitted logs are eligible for awards. Logs must be in ARRL
format (log sheets and summary sheet as used for ARRL VHF contests) to be
accepted, and must show current address to be eligible for awards. Electronic
submissions in ARRL acceptable electronic format may be mailed on diskette or
emailed with log file as an ATTACHMENT only (Not in the body of
e-mail). Subject line of e-mail must contain “2012 Fall Sprint”. In e-mail addresses
below (at) is really an @ sign. Logs must be submitted no later than 30 days after the
closing date ofEmail reporting is prefered!!5.1 50 MHz Sprint logs to:
Ray Rector WA4NJP, 3493 Holly Springs Rd, Gillsville, GA 30534
wa4njp(at)bellsouth.net
5.2 144 MHz Sprint logs to:
Steve Kostro N2CEI, 17519, 78
144FS(at)downeastmicrowave.com
5.3 222 MHz Sprint logs to:
Bob Lear W4ZST, PO Box 1269, Dahlonega, GA 30533
w4zst(at)windstream.net
5.4 432 MHz Sprint logs to:
Charles Osborne K4CSO, 2396 Buford Highway, Duluth, GA 30097
k4cso(at)charter.net
5.5 Microwave Sprint logs to:
Bruce Randall NT4RT, 928 Falls Rd, Rock Hill, SC 29730
nt4rt(at)arrl.net
6. Certificates for top three Single Op finishers in each sprint and top three Rovers in
each sprint if sufficient Rover competition is shown. Certificates to be awarded at the
Southeastern VHF Society banquet.
7.
contacts during the contest.
or internet methods to
telephone, packet or internet channel will not be used while the contact is in progress.
No “OK I am hearing you now.” over the alternate channel. The alternate channel
will not be available in any way to the operator during the contact. The complete
exchange of call signs and grids must be accomplished on the relevant amateur radio
band. All other bands must use only amateur radio communications for scheduling
during the contest.
The Fall Sprints are sponsored by the Southeastern VHF Society.
Please visit www.svhfs.org for any updates.
If you have no clue what your SIX-Character Grid Locator is then try:th Terrace, Live Oak,
FL 32060No use of telephone, packet or internet is allowed to scheduleFor Microwave only:
Use of telephone, packetschedule contacts during the contest is acceptable.
Thehttp://f6fvy.free.fr/qthLocator/fullScreen.php?locator=EMThis uses Google Maps. I was
actually able to see my shack and antenna in satellite

photo mode. If you click on a spot, the Latitude, Longitude, and 6 digit Grid are displayed. This is a really neat tool. Thank you to Larry F6FVY.

Date: 2012-09-05 00:59:48 UTC
From: Rhonda
Topic: 3125 Message: 3125

Greetings!

On Saturday, September 15 at 7pm we will be visiting Steer In, 5130 E. 10th St in Indy for our monthly dinner.

If you have not joined us before and are in the area, feel to stop by. We are just a bunch of hams who love to eat and talk and families are welcome. The conversation is varied enough that even those who are not hams can easily be
involved.

Hope to see you all there!

73,

Steve & Rhonda
ND9C & WS9H

3131. Technician License Classes Start 9/29

Yahoo group: IndyHamRadio
Date: 2012-09-10 13:46:41 UTC
From: John Parker
Topic: 3131 Message: 3131

Get on the Air!

Technician License Classes Start Saturday, September 29th at 9 AM at the Subaru of Indiana Training Center, Lafayette.

Morse Code is no longer a license requirement. Morse is an optional mode of communication you may learn later if you so wish.

Classes will be taught by Dan, WA9DDI, of the Tippecanoe Amateur Radio Association and Tippecanoe County Amateur Radio Emergency Service groups.

Contact Cheryl, K9HER at k9herradio@... to reserve a spot!

No cost except license manuals, approx. $30. Exam will be given at end, cost about $16.

Be sure to contact Cheryl! You will need to be "on the list" to get through the SIA gate, 2nd stoplight west of I-65 exit 168.

3132. GENERAL CLASS SCHOOL

Yahoo group: IndyHamRadio
Date: 2012-09-10 14:02:11 UTC
From: Delbert Felix
Topic: 3132 Message: 3132

RIPLEY COUNTY AMATEUR RADIO CLUB IS SPONSORING A GENERAL CLASS SCHOOL.
Begins Monday Oct.1,2012 at 6pm
Location: American Red Cross (629 South Buckeye street Osgood In. 47037)
Cost: $23.00 book fee and $15 test fee.
Book fee payment and preregistration must be done by Monday Sept.24 .
Talk in frequency +441.775 or +147.135 (pl# 146.2).

Class will be 4 weeks long every Monday & Wednesday from 6pm - 8pm .

Test will be on Saturday Nov.10,2012 at the Ripley County Fairgrounds
(524 Beech street Osgood Indiana 47037)

Please contact Delbert wy9l.thebigdog@... or call 812-756-2470 for preregistration.
For book payment please send checks to ;
RCARC
114 Harlan street
Osgood Indiana 47037

Hope to see some of you at the school and upgrade .

3133. Technician License Class Starts 9/29

Yahoo group: IndyHamRadio
Date: 2012-09-16 02:42:18 UTC
From: John Parker
Topic: 3133 Message: 3133

Technician License Class Starts Saturday, Sep. 29th, Lafayette!

Please pass the word to prospective hams! Mention Morse Code is no longer a license requirement and if desired, can be picked up later. No charge for the classes.

Subaru of Indiana Automotive Plant Training Center
5500 IN SR-38, just west of I-65 exit 168.

Classes will be Saturdays and start at 9 AM.

NOTE: Contact Cheryl K9HER at K9HERradio@... to register.

IMPORTANT! You must be "on the list" to get through the SIA Security Gate, so be sure to contact Cheryl!

Dan WA9DDI, will be teaching the classes. Dan is a member of TCARES, Tippecanoe County Amateur Radio Emergency Services and TARA, Tippecanoe Amateur Radio Association.

Dan will solicit ideas from the class 9/29 as to length of classes and how many Saturdays.

At the end of the classes, an exam session will be held. The fee for the exam is the standard fee of $15. The exam is an untimed, 35 question, multiple choice exam and is graded on the spot. It is pass/fail. At least 26 correct answers will result in a pass and ham license! The exam covers 3 areas. Basic radio theory. Operating practices. FCC rules.

Reference materials are estimated to cost about $30, plus S+H.

From: W5KUB Broadcast <wa5kub.video3@...>
Date: October 2, 2012, 8:57:47 PM CDT
To: Tom Medlin <wa5kub.video3@ gmail.com>
Subject: Live Broadcast of MFJ 40th Anniversary Celebration

It's time for the Live Broadcast of MFJ 40th Anniversary Celebration! !

MFJ Enterprises will be celebrating their 40th anniversary October 5th and 6th (Friday and Saturday) in Starkville, Mississippi!

For those that can attend in person, there will be door prizes (must be present to win), free factory tours (MFJ, Ameritron, Cushcraft, Hy-Gain, Mirage, Vectronics, and MFJ Metal Shop), free lunch, free tailgating, free forums/discussions, and FCC license exams.

Special guests will include:
Martin F Jue, K5FLU, president and founder of MFJ Enterprises Inc
Malcolm Keown, W5XX, ARRL Mississippi Section Manager
Harold Kramer, WJ1B, COO American Radio Relay League
Chip Margelli, K7JA, CQ Communications, Director of Advertising Sales and Marketing
Janet Margelli, KL7MF, Ham Radio Outlet, Anaheim Manager
Ray Novak, N9JA, Icom America, Division Manager – Amateur & Receiver Products
Ted Randall, WB8PUM, QSO Shortwave Radio Host
Dick Ross, K2MGA, CQ Magazine Publisher
George Thomas, W5JDX, Ham Nation, AmateurLogic. com

For additional information regarding the MFJ 40th Anniversary Celebration go to:
 http://www.mfjenterprises.com/dayinpark.php

If you cannot attend in person, please join the live, online broadcast of MFJ 40th Anniversary Celebration events at: http://w5kub.com/ where the fun begins!

MFJ 40th Anniversary Celebration broadcast hours:
Thursday, October 4: 2000 UTC (3:00 PM CT) drive from Memphis, Tennessee to Starkville, Mississippi (approximately 3 1/4 hour drive)
Friday, October 5: 1300 - 21:30 UTC (8:00 AM - 4:30 PM CT)
Saturday, October 6: 1300 UTC - 1900 UTC (8:00 AM - 2:00 PM CT)
Saturday, October 6: 2000 UTC (3:00 PM CT) drive from Starkville, Mississippi to Memphis, Tennessee (approximately 3 1/4 hour drive)

You could be the winner of an online MFJ prize (not to be confused with the MFJ door prizes) which will be awarded during the W5KUB broadcast.

Of course, no purchase is necessary to win a prize. W5KUB is not affiliated with any products or companies and does not sell any products or services.

During the live broadcast, you will also have the opportunity to meet and chat with other amateur radio operators from all over the world. The 2012 Dayton Hamvention broadcast had 47,400 viewers!

Please join our group on Facebook at https://www.facebook.com/groups/w5kub/ to keep up with us year-round.

Also, please help spread the word by posting this announcement in Facebook and forwarding this message to your ham radio friends that may not have received this message!

We'll 'see' you at MFJ!

3138. Re: [IndyHamRadio] Thinking about an antenna...

Yahoo group: IndyHamRadio
Date: 2012-10-03 16:08:32 UTC
From: Bob Burns W9RXR
Topic: 3136 Message: 3138

DX Engineering has something similar in both construction and length.

Everything I've read about non-resonant verticals seems to come to two conclusions:

1. You need radials. The more the better. There are several references on the web to how many and how long the radials should be. If I recall correctly, most reference say 16 radials are a minimum, but 32 is better. You can use grass staples to keep the radials down in the thatch long enough for your lawn to grow over the radials.

2. You really should use a remote tuner mounted at the antenna. If you put the tuner at the radio, it will be at the opposite end of the antenna from the feedline which means the feedline has to deal with all the loss due to the mis-matched impedance. Put the tuner at the antenna and the feedline should see 50 ohms.

I've toyed with the idea of one of these verticals on a tilt base so I can lower it below the top of my privacy fence when I'm not using it. Since I have an Icom radio and I already have the Icom AH-4 automatic remote tuner, I will probably put that tuner at the antenna. SGC and MFJ also have automatic remote tuners.

Bob...

From: Brian Murrey
Topic: 3136 Message: 3140

Bob,

Ahh...as usual, very good advice. Radials make the vertical rock, no doubt, although I have seen hams debate the best number of radials to have for hours and many beers on end. I think we all agree that more is mo' better.

I long to get off the attic dipole, although it has served me well these last 14 or 15 years...but I don't have a lot of room so no guy wires, no towers, and even though I would rather have a host of wire dipoles to play with, I don't have room for that either...so the ground mounted vertical is always popping up as my usable option. I suppose I could buy out my neighbor, blow up his house, and make the lot into my antenna field...I just need some more dough for that.

ZeroFive mentions something in the PDF file about having to use a minimum run of coax of 50 feet and they swear you do not have to put the tuner at the base of the antenna...although I would probably do that if I could figure out how to power it. LDG makes some remote tuners if I remember correctly. I guess if I am going to do this, I need to get it done by the end of the month...or wait until next spring.

Thanks again Bob

3142. iHAB-8 Launch Announcement

Yahoo group: IndyHamRadio
Date: 2012-10-10 23:23:11 UTC
From: Brian
Topic: 3142 Message: 3142

*iHAB-8 Launch Announcement

*The iHAB Team is excited to announce the next launch of the iHAB Project! iHAB-8 is scheduled to launch October 14, 2011 at 16:00Z (11AM CDT). The iHAB Team as well as other High Altitude Balloon fans have had a challenging year trying to launch balloons due to the global helium shortage. You can read more about the shortage here HERE <http://www.forbes.com/sites/timworstall/2012/08/27/what-great-helium-shortage/> . We were fortunate to obtain enough helium to complete one launch in 2012, and iHAB-8 is that launch!

The iHAB Team is excited to fly another "FUN" payload. Including a new "micro" 20 Meter QRP CW beacon designed and built by Dave Cripe - NM0S, Hi-Def Video, and time-lapse photography. The CW beacon controller is a new version (not yet available for purchase) of the EZKeyer from 4SQRP. The EZKeyer v2 has expanded memories, AND beacon mode!

The other exciting mission to this launch, and the reason we are calling is "X" Marks the Spot is because we are going about this launch a bit backwards to what we have done thus far. For an added twist of difficulty, we have preselected our desired LANDING location, and will be calculating out LAUNCH location based on continued calculated predictions right up until we launch. This will challenge our Propulsion Team to hit their mark!

*Visithttp://www.ihabproject.com/iHAB-8/
for updated Flight News, and Launch Information.*

*=== The launch of iHAB-8 will be webcast LIVE starting at/around 10:30AM CDT, so please plan to visit Mission Control. ===

3143. Free TV in the Area

Yahoo group: IndyHamRadio
Date: 2012-10-11 14:49:36 UTC
From: Brian Murrey
Topic: 3143 Message: 3143

I am exploring the options of free over the air TV stations in the central Indiana area, for reception in northern Johnson County. I bought an amplified indoor antenna and hooked it up yesterday and was surprised to see it scanned 29 statoins. I had no idea there were that many out there. Having some trouble pulling in 8-1, 8-2, 8-3 but the rest seem to be coming in pretty well.

This is not ham radio related but I thought some of you might be able to point me in the right direction. Is there somewhere online to discuss digital over the air TV in Indianapolis? Where do we go to learn about new programming, channels, etc?

Welcome to the world of OTA television. Enjoy it while you can because the FCC seems intent on auctioning off more and more television spectrum. First it was the 800 MHz band which resulted in the demise of Channels 70-83. Then it was the 700 MHz band which cost us Channels 52-69. Now, they are going after the 600 MHz band, which means we'll lose Channels 38-51. Note that I'm talking about RF channels, not the virtual channels your HDTV indicates. But, enough of the politics.

The best source I've found for information and discussion about HDTV reception in Central Indiana is a thread in the Local Reception forum at avsforum.com:

http://www.avsforum.com/t/186022/indianapolis-terre-haute-lafayette-in-hdtv

You'll probably want to jump to the end of that thread as it started in 2002 and goes on for over 200 pages.

Also, if you want to see what stations you should be able to receive, check out tvfool.com:

http://www.tvfool.com/index.php?option=com_wrapper&Itemid=29

Enter your address and antenna parameters and it will tell you what channels you should be able to receive at your location.

As for programming, if you HDTV has a guide feature, you will find it to be pretty useful. Also, TV Guide online (www.tvguide.com) has listings for the local primary and sub-channels.

I'm not surprised that WISH and their subchannels are hard for you to receive. They are on RF Channel 9, so you need a good VHF TV antenna to get a good signal from them. WTHR may also be a little dicey as they are on RF Channel 13. The rest of the Indianapolis stations are on UHF.

There's a long story about how the FCC determined maximum power output for the VHF HDTV broadcasters. Since the days of analog TV, UHF stations have typically been allowed to run more power than the VHF stations. That philosophy carried through the digital transition, but the VHF stations started getting lots of complaints from viewers about signal problems. So, some VHF stations tried to get UHF licenses. WTHR considered this as they used RF Channel 46 during the transition. But, the FCC eventually relented and allowed some of the

VHF stations to run more power.

Nonetheless, if you want the best reception of the stations on VHF, like WISH and WTHR, you'll need a VHF antenna which will be bigger than the indoor antenna it sounds like you are using.

Bob...

Brian

Here is a TV schedule for the Indianapolis area. It has a few stations that you cannot get here.

This schedule shows the channel and what the channels and sub channels are labeled.

Be aware that some stations are still operating on the VHF band. Not all have moved to UHF.

WISH operates on channel 9

WTHR operates on Channel 13

3149. School Club Roundup - Can you help?

Yahoo group: IndyHamRadio
Date: 2012-10-16 18:40:25 UTC
From: Brian Murrey
Topic: 3149 Message: 3149

Dear Fellow Hams:

The Dresden Elementary Amateur Radio Station KD8NOM, Dresden, Ohio will be active in the School Club Round-up contest this week. From about 3:40 until 5:59 P.M. we will be looking for contacts in the phone bands (and maybe CW later in the week) on 40 meters 7.225-7.255; and on 20 meters 14.250-14.280. We will also we working VHF on 146.55 mhz FM. I ask that you please give us a call on one of those frequencies and add to our point totals. Club calls and other school club contacts count for even more!
You may remember that last year we were only able to operate one night but our QSO rate was top notch. We're going for broke with 5 nights of 'testing! There are 15 members in our after school group of 5th and 6th graders and they are EAGER to get worked!

ALSO--- PLEASE S P R E A D the word that we'll be on the air. Those of you who are involved with OSSB nets please pass this traffic onto other areas of the state and beyond. If you can SPOT us on any of the clusters is also welcome. FORWARD this email to other clubs and club members int he state and beyond.

We're looking for the best effort we can give for this contest and our students are up to the challenge!

Dear Fellow Hams:

The Dresden Elementary Amateur Radio Station KD8NOM, Dresden, Ohio will be active in the School Club Round-up contest this week. From about 3:40 until 5:59 P.M. we will be looking for contacts in the phone bands (and maybe CW later in the week) on 40 meters 7.225-7.255; and on 20 meters 14.250-14.280. We will also we working VHF on 146.55 mhz FM. I ask that you please give us a call on one of those frequencies and add to our point totals. Club calls and other school club contacts count for even more!
You may remember that last year we were only able to operate one night but our QSO rate was top notch. We're going for broke with 5 nights of 'testing! There are 15 members in our after school group of 5th and 6th graders and they are EAGER to get worked!

ALSO--- PLEASE S P R E A D the word that we'll be on the air. Those of you who are involved with OSSB nets please pass this traffic onto other areas of the state and beyond. If you can SPOT us on any of the clusters is also welcome. FORWARD this email to other clubs and club members int he state and beyond.

We're looking for the best effort we can give for this contest and our students are up to the challenge!

Very '73
Jim Mayercak / WX8J
Advisor for the DEARS/KD8NOM Student Group

At about 12:30PM I turned on the radio while at lunch...and I could here what sounded like a male voice, doing dispatcher duties? He sounded like he was talking to someone on a radio or maybe a interocm? ..did not sound like police/fire...more like maybe a trucking company, taxi service, or something like that? Eventually the repeater timed out and shut down. I did not check the input from 86th and College, sorry.

Good luck in the hunt.

3156. FS: Elecraft K1 - 4 Band HF Radio

Yahoo group: IndyHamRadio
Date: 2012-10-19 15:23:25 UTC
From: Brian Murrey
Topic: 3156 Message: 3156

I am selling my Elecraft K1. It is a 4 bander, includes 17m, 20m, 30m, and 40m. It has the automatic antenna tuner, and noise blanker. So you can use it from the car right away. Also has the tilt stand. Comes with original manuals. SN 2845, I am second owner. It is in great shape, works 100%, non smoker home. Makes just shy of 7 watts out.

This is a QRP CW radio. Does not do PSK, RTTY, SSB.

All this stuff is $609.80 new plus shipping from Elecraft. They must have raised the prices.

How's $450.00 including US shipping sound? No trades, I need the cabbage for another project. No Paypal. No eBay.

Cash, check or MO is fine.

3157. *iHAB-8 Launch Announcement**

Yahoo group: IndyHamRadio
Date: 2012-10-22 19:10:05 UTC
From: Brian Murrey
Topic: 3157 Message: 3157

*iHAB-8 Launch Announcement**

*The iHAB Team is excited to announce iHAB-8 is scheduled to launch October 27, 2012 at 16:00Z (11AM CDT). The iHAB Team as well as other High Altitude Balloon fans have had a challenging year trying to launch balloons due to the global helium shortage. You can read more about the shortage here HERE:

<http://www.forbes.com/sites/timworstall/2012/08/27/what-great-helium-shortage/>

We were fortunate to obtain enough helium to complete one launch in 2012, and iHAB-8 is that launch!

The iHAB Team is excited to fly another "FUN" payload. Including a new "micro" 20 Meter QRP CW beacon designed and built by Dave Cripe - NM0S, Hi-Def Video, and time-lapse photography. The CW beacon controller is a new version (not yet available for purchase) of the EZKeyer from 4SQRP. The EZKeyer v2 has expanded memories, AND beacon mode!

The other exciting mission to this launch, and the reason we are calling is "X" Marks the Spot is because we are going about this launch a bit backwards to what we have done thus far. For an added twist of difficulty, we have preselected our desired LANDING location, and will be calculating out LAUNCH location based on continued calculated predictions right up until we launch. We have chosen the Ottumwa Industrial Airport - KOTM as our "X". This will challenge our Propulsion Team to hit their mark!

Visit http://www.ihabproject.com/iHAB-8/

3160. University of Southern Indiana's HAB 9 Team attempt to break the world record

Yahoo group: IndyHamRadio
Date: 2012-10-25 04:09:51 UTC
From: Chris Lantaff
Topic: 3160 Message: 3160

On Saturday, October 27, 2012, the University of Southern Indiana's HAB 9 Team will attempt to break the world record of dropping a paper airplane from an altitude of more than 89,591 feet. The plane will be constructed of paper straws, paper board, and printer paper, and will have a video camera and tracking device on board.

The current launch prediction is to launch from near Rend Lake IL at 8:00 am The balloon can be tracked on aprs as W9MOK, with the paper airplane released at 100,000 ft on aprs as W9MOK-2.
The balloon is predicted to burst at 110,000 ft and return to the area of Southern Gibson or Northern Vanderburgh County in IN.

More info can be found at https://sites.google.com/site/usihab2011/home
Other information should be available shortly on the TARS web site www.w9og.net

Date: 2012-10-31 21:20:12 UTC
From: Brent
Topic: 3162 Message: 3162

Mark your calendars now for the quarterly meeting of the Marion County ARES Team on November 15th at 7:00PM. We will be meeting at the American Red Cross located at 441 East 10th Street in downtown Indianapolis. I will be monitoring the 146.625 repeater for anyone that may need directions.

If you have not registered for Marion County ARES, please send me an e-mail at k9cfe@... for more information on how to join the team.

If you plan on attending this meeting, please be sure to send me an e-mail at k9cfe@arrl.net so we can plan hand outs and seating space accordingly.

3163. BAOFENG UV-5R Indy Chirp file available?

Yahoo group: IndyHamRadio
Date: 2012-11-03 00:49:22 UTC
From: n9awu
Topic: 3163 Message: 3163

Hi all,
I have purchased a Baofeng UV-5R dual band handheld and am waiting on delivery.
Rather than reinvent the wheel, I thought I would ask if anyone has a Chirp program file (or one that works with other programming software) with all or most of the Indy ham frequencies ready to program the radio. Might be a nice thing to have in the files section here for all to access. If you have one that you could share, please email it to me.
Thanks & 73
- Byron N9AWU

From: Robert LaGrange
Topic: 3163 Message: 3166

Hi Carl,

The UV-5R is an entirely different radio than the UV-3R, I have one of each. TheUV-5R is a slightly larger HT radio and has a key pad and other features that the UV-3R does not have. The UV-5R has a big four watts to work the repeaters, you do have a dual watch feature but it not cross band transmit. Here is a great web site for the BaoFeng UV-5R, you might want to look this web site, http://www.miklor.com/uv5r/ it has lots of good information about this radio. It is a great radio for the price, I ordered directly from Hong Kong and paid only $48.00 including shipping.

The UV-3R is a great little radio also, I take it on trips since it is very small and it too costs less than $ 50.00. These radios make good HT to take with you wherever you travel. If you happen to damage it beyond repair or leave it behind somewhere you are not out that much in dollars. I treat my YEASU FT-60 a little different than the BaoFeng radio and would hate to loose it when traveling.

The BaoFeng UV-5R is inexpensive but still a great value.

There is one more thing: Just remember, you can't get Ferrari options out if a KIA.

Have a great evening and 73,

Bob N9SIU

Thanks for the file Bob!
I will load it and check it out.
I began playing with Chirp last night and created a small file to try, but I'm still waiting on a programming cable.
I purchased the radio from Amazon last week on sale for $43.50 shipped. Came from stateside too, just unbelievable. Performance is great and the audio reports are good.
I don't want to start a "thread" here that is better suited for the UV-5R group, but thought the programming for Indy would be OK.
Thanks again,
Byron N9AWU

From: Rhonda
Topic: 3170 Message: 3170

Greeting!

Can you believe that we are already planning the December dinner? It will not be long before Christmas is here.

For December we will be going to Jonathan Byrd's Cafeteria, 100 Byrd Way, Greenwood, IN. If you haven't been there, it is cafeteria-style dining with tons of things to choose from.

If you haven't joined us before, we would love to have you. Families are welcome and conversation is usually about everything under the sun so even those who are not hams will be comfortable.

We hope to see you all there!

73,

Steve & Rhonda
ND9C & WS9H

3171. New CW Transceiver for $40

Yahoo group: IndyHamRadio

From: Brian Murrey
Topic: 3171 Message: 3171

Can you solder? Can you read a schematic? Do you like working CW?

W8DIZ has a new kit out, The PigRig Transceiver. A full 5w single board, transceiver for 7030.70 Khz for $40.00

All you have to do is build it. Even comes with a built in keyer so you can use paddles or a straight key.

http://kitsandparts.com/fpra-7030.7.php

I have worked Diz on his prototype a couple of times, and I have listened to him QSOing numerous times and this little radio is rock solid.

From fellow QRPer Paul Harden NA5N out at the VLA in New Mexico....

We're running a special experiment today using the VLA antennas to observe at 74 MHz (a protected radio astronomy band) and at 327 MHz. We've hung dipoles just below the antenna subreflectors, acting as a virtual ground, and of course the 88ft dia. dishes to illuminate the dipoles. Picks up a lot more power from the sky than I would have thought (about 30dB gain over the same dipoles in free space).

Anyway, about 0830 MST, suddenly the system temperature climbed about 200 deg. K. Our switched power calibration injected into the LNAs showed no shift, meaning the jump in power came from the sky, not from the electronics. The power plot looked just like a solar flare. Checked the NOAA site, and sure enough, we had an M4 solar flare from region 1618 ... about smack in the center of the sun. About 1530UTC=0830MST=1030EST, Wed. Nov. 21.

NOAA has since measured the shock wave from the CME at 1918 km/sec. This is a fairly strong shock wave, and coming from the center of the sun means planet earth will be pretty close to the bulls eye. The first time in my life I witnessed a major solar flare in real time watching the "sky power" plots. Pretty neat. First time the astronomers involved in this experiment have witnessed a solar flare as well real time.

Region 1618 has produced numerous C- and M-class flares past couple of days with high potentials of future activity. This will ionize our E/F layer for elevated MUF and weak signal reflection. Check the bands if you're not at work. This 1918 km/sec. shock wave headed for us will almost assuredly trigger a major geomagnetic storm in a couple of days. If it hits Friday evening, it will trigger likely aurora over northern U.S. It may hit Saturday. I'll check the NOAA predictions later today and post as to the expected shock wave arrival.

72, Paul NA5N
Socorro, NM
Currently inside of VLA antenna #5, west arm.

Indiana Hams,
Just passing along an opening with the Hoosier SAFE-T folks. Please do not contact me. I have no other information about the position.

73,
Don

JOB ANNOUNCEMENT

Land & Mobile Radio Technician
AGENCY: Indiana Integrated Public Safety Commission (IPSC)
JOB POSTING ID: 582350
APPLY BEFORE: December 2, 2012
LOCATION: Northwest IN
BASE SALARY: $33,748.00
TO APPLY: http://www.in.gov/spd/2333.htm

HIRE SALARY:
If selected applicant is not licensed - position will be underfilled a level lower.
Hire/base salary for the lower level is: $26,702.00

JOB DESCRIPTION:

NOTE: Position will function primarily in the northwest portion of the state.

Incumbent serves as a public safety radio technician, performing a wide variety of advanced in shop and field technical systems support duties; such as, maintenance and repair of public safety radio systems that include vhf transmitters and receivers, the statewide microwave network and a large fleet public safety mobile and portable two-way radios.

Incumbent is responsible for accepting call out 7/24 in response to outages that may involve assisting subordinate technicians with repair, retune and adjustment of microwave radios, VHF transmitters and receivers; and, resolving software/programming issues with mobile and portable two way radios. Also, instructs technicians in the use of sophisticated service monitoring and test equipment, and repair and maintenance of battery chargers and electrical circuits that support power to the statewide radio system.

RESPONSIBILITIES:

* Install, program and maintain mobile and portable two-way radios and/or the public safety microwave and related systems located at remote radio sites statewide.

* Align, test, program and maintain mobile/portable radios and related electronics equipment using a wide variety of state of the art test instruments.

* Provide daily problem resolution for various hardware and software problems related to microwave circuits and wide area networks utilized by many public safety personnel.

* Provide customer support, assisting where possible with technical questions related to operations of both the microwave and related public safety radio systems.

* Complete equipment maintenance records required by the Federal Communications Commission (FCC), and update computer generated data as needed.

* Perform preventative maintenance, using established testing procedures to ensure uninterrupted operation of the microwave and related radio systems.

* Assist in the design, configuration and implementation of telecommunications systems networks and structured cabling, including but not limited to multi-layer switches, routers, and VPN appliances, etc.

* Research, develop and initiate standardized testing procedures to ensure uninterrupted operation of the statewide 800MHz radio system and provide adequate telecommunications services to the department.

* Monitor and inspect backup generators, tower lighting controls, communications tower grounding systems, guy wire anchors and systems, general communications building and grounds conditions. Report any discrepancies to supervisory staff or engineering personnel for corrective action.

* Keep abreast of new technology by participating in continuing education through research, training, and review of industry technical manuals.

PREFERRED EXPERIENCE:

* Must possess a Federal Communications Commission (FCC) General Class Radiotelephone License, or an acceptable equivalent certification such as Certified Electronics Technician (CET) Wireless Certification with ability to apply technical standards and assure compliance with F.C.C. Rules and Regulations. If selected applicant is NOT LICENSED - position will be underfilled.

* Technical diploma or Associates degree in electronics from an accredited technical school or college; or acceptable related work experience with demonstrated skills, knowledge and ability in communications and electronics. High school diploma or GED required.

* Understanding of computer operation and terminology, with an the ability to use sophisticated radio programming software, computer spreadsheets, databases, programming and retrieval of information using various specialized software tools.

* Knowledge of component level troubleshooting techniques and use of digital electronic diagnostic equipment.

* Knowledge of public safety land mobile radio systems and telecommunications

* Must have a valid Indiana driver's license.

* Availability for after hour's callout in support of the statewide public safety radio systems or other emergencies, as required.

* Working knowledge of the hazards involved with high voltage electronics equipment and applicable safety procedures.

* Ability to read, comprehend and interpret technical manuals and various schematic diagrams.

* Ability to communicate and relate with non technical personnel, technical support services and vendors. Both oral and written communications skills are necessary for this position.

* Ability to lift heavy equipment such as batteries and test equipment (up to 50 lbs.).

* Ability to travel to remote locations throughout the state which may include overnight stays.
Ability to work alone and unsupervised.

The Ripley County Amateur Radio Club & ARES team have went in together to accomplish a goal of getting an Mobil Communications trailer.
As of last month they have received the trailer & have equipped it with a few radios but are still in need of a few items.
They are still lacking a 30+ watt power supply, and HF radio, and a 75m Hamstix.
If anyone could donate one to the new trailer it would be greatly appreciated and it would go to a good group of hams.
This trailer will benefit many ways.
It can be used for emergency communications,summer & winter field day, special event stations, and to train new hams on different types of radios, and to prepare members for emergency communications.
They have come up with 2m, 440, 47.42mhz. , cb radio, and a police scanner, but are still in need of an HF station.
Please let us know if you can help us .
Thank You.

Delbert Felix WY9L
ARRL ARES District Emergency Coordinator
Indiana Section District 9

3181. Hot off the Wire - DX Alert (HUMOR)

Yahoo group: IndyHamRadio
Date: 2012-12-04 13:43:31 UTC
From: Brian
Topic: 3181 Message: 3181

FOR IMMEDIATE RELEASE

After a lot of negotiation we are pleased to announce a multinational team of twelve is to undertake a Dxpedition to Bouvet Island from 25 March 2013 to 5 April 2013 using the callsign 3Y0IOF.

We will be operating 24/7 with five stations covering all bands 160m-10m.

We understand that Dxpeditions are all about you - the DX operator - therefore we are pleased to announce some exciting new innovations.

We appreciate many of you feel you should not have to make any effort to work us. Accordingly, we are offering you the chance to call us on the telephone when you are ready for a QSO. That's right, we will give you a phone number and when you are ready you can ring us and we will immediately cease to work the pile up and call you on a frequency of your choice. Not only that, we will also ensure an email is sent to you directly after the QSO to confirm you are in the log. Furthermore, we are organizing a team of experts who, if you wish, will fly in and set up your rig on the required frequency, connect the antenna for you and make sure the heating or ventilation is on so it is nice and warm or cool in your shack as the case requires. Don't worry about propagation. We will make sure there is some between us as we understand that is our responsibility and it's our fault if there isn't.

If that is not for you then don't worry we are just as happy to work you in a pile up. We realize that we will need to operate in accordance with your operating habits so therefore we will understand if you call over the top of another station we are trying to work, or when we are specifically calling a part of the world you do not reside in, or if you are simply calling aimlessly or while we are transmitting, or even if you call when you cannot hear us. We will do our best to work you despite all this and yes we know it's our fault if you do not make it into the log.

We wish to acknowledge the value Frequency Cops bring to a Dxpedition so to recognize this we are going to specifically publicize some times when we will arrange for some operators to deliberately call us on our frequency instead of split. Frequency Cops can even register their availability with us to help us ensure these periods get maximum uptake by the Frequency Cop community. During these periods the Frequency Cops will be able to say or send "up up!" to their hearts content. (Note: we will make sure we tell the pile up to listen up and not down as the recent PT0S Dxpedition has taught us that Frequency Cops don't know how to send "down" in CW).

We also don't want the "tuner uppers" to feel left out and like them we feel dummy loads are completely overrated. So when we are ready to transmit on a band we will give them the opportunity to tune up on our frequency before we

start working the pile up. Each period will start with us sending our callsign and "QDL" ("Quick Dummy Loaders") so they will know when to commence tuning up on us. We will allow for at least five minutes for this as we know how important it is for the tuner uppers to make sure their finals are good and ready. We acknowledge if they go bang it's our fault. Depending on demand we will every now and then send "QDL" while working a pile up so any tuner uppers late to the party can tune up on us as well.

Unfortunately we will not have cluster access while we are on Bouvet but we know this will not stop you posting announcements and comments on the cluster about our Dxpedition. Some suggestions for you to try include saying what band you want us to QSY to or mode to operate on, the quality of our ops and the usual "loud", "can't hear them here", "thanks for 7th band" or "yee hah" comments. Likewise as we noted above we understand it's our fault if you cannot work us and therefore we accept in that case you will post on the cluster calling us the worst Dxpedition ever.

We can't wait to be of service to you.

The 3Y0IOF Team

Meet
Robin Cutshaw AA4RC
Co-Inventor of the DVDongle/DVAP

http://blip.tv/HamRadioNow/episode-20-robin-cutshaw-aa4rc-6348685

Robin Cutshaw, AA4RC sat down with HAMRADIONOW.tv's KN4AQ
for a long conversation about how he discovered D-STAR,
found that while it was an advance in Ham Radio technology,
there were a few things missing.

And he set out to include them. It began with a few software gimmicks,
then morphed into DPLUS software that allowed linked repeaters and reflectors,
and soon became a growing line of hardware (DVDongle, DVAP, UHF-DVAP).

FRANKFORT ☐ Veteran broadcaster Vern Kaspar [W9FAM] credits education as a significant factor in his family's success.

Now, the Kaspar family is donating $180,000 to the fundraising campaign for the new Ivy Tech Lafayette Region campus in Frankfort.
In recognition of the gift, the main campus building at 251 E. Clinton St. will be named Kaspar Hall.
"It is my hope that Kaspar Hall will be a celebration and inspiration to others," Kaspar said, "and reflect the importance of education to my family's success."

http://www.jconline.com/article/20130102/NEWS05/301020022/Broadcaster-s-gift-boost-Ivy-Tech-s-new-campus

From QRZ
As Amateur radio operators we know that our hobby is like no other. We have the ability to bridge cultures, both nationally and internationally. Amateur radio offers opportunities for public service , technological advancement. and just plain camaraderie.

Through the magic of amateur radio there is always an element of mystery when an amateur radio operator sends out a general CQ call. Who will answer and what foreign country will be their home? What mutual interests do we share? Through amateur radio friendships are expanded world wide.

Amateur radio, by and large, is conducted, QSO AFTER QSO, on a high level of mutual respect. This makes many things possible and greatly enhances the benefits of being an Amateur radio operator.

Amateur radio operators are a very privileged group. We have the ability and the vehicle to not only broaden our minds and enrich our experiences .but through amateur radio we value our differences and in the process spread international goodwill!

W9FAM Vern Kaspar W9 Father And Mother

Vern has been an amateur operator since 1936. QRV on all bands. QRV on CW. Enjoys operating QRQ CW.

Before WWII Vern had an F.C.C. Radio Telegraph License and worked for the West Virginia State Police. On duty Vern had immediate contact with all of the other 47 states in our union. Using CW he obtained vehicle registration for the State Troopers when they stopped out of state vehicle.

He has operated from several world QTH's. Likes to use high towers and mono band antennas. Has 5 element mono @ 152'/51 meters on 20. A 2 element phased array @ 160'/53 meters on 40. A 12 element log peiodic at 35 meters. A 5 element 15 meter telrex @ 24 meters & 5 element 10 meter telrex @ 22 meters. Wire antennas include a Super Loop running North/South at 110 feet/31 meters. He also has a 160 meter Carolina Windom at the same height running

East/West.

Date: 2013-01-04 14:44:18 UTC
From: Ray, K9DUR
Topic: 3189 Message: 3189

The WVARA will be starting an Amateur Extra upgrade course starting this Tuesday, January 8th, at 6:30 pm EST.

The course will last 10 weeks, finishing with a VE exam session on March 29th. Class sessions will last 2-3 hours, depending on the material to be covered.

Class Location
==========
Glas-Col Annex
(Old Idaho Post Office Building)
1715 South 8th Street
Terre Haute, IN.

Class Fee
=========
$30 (includes a copy of the textbook)
$5 (if you already have a copy of the textbook)

Class Textbook
==========
ARRL Extra Class License Manual, Tenth Edition
(NOTE: Previous editions of the book cannot be used.)

Class Registration
==========
You can pre-register for the class on the WVARA website:
http://www.w9uuu.org/classes.html

Map & driving directions are also available on the website.

From: Brian Murrey
Topic: 3190 Message: 3190

Once again the Midstate Amateur Radio Club in Franklin Indiana is offering a one day Technician class to help new hams prepare for the FCC Amateur Radio Exam. The class date is February 9th. If you are interested, email secretary@... for all the details.
Classroom size is limited so first come, first served.

Read all about it here: http://www.midstatehams.org/sparkgap/Dec12.pdf

Pay attention to Page 2

Midstate Amateur Radio Club has been serving the community for over 25 years, and is happy to be an ARRL affiliated radio club.

From: Ken Bandy, KJ9B
Topic: 3189 Message: 3192

Where are you located, Will? There are two classes coming up that I know of:

CLASSES COMING UP IN HENDRICKS COUNTY – Classes in Hendricks County will be on

Tuesday evenings this year, beginning on January 29, 2013. Instruction for all classes of license will be

offered. Classes will run approximately 2 hours, beginning at 7:00 pm. The classes will run 8 or 9

weeks. Classes will be held at the Hendricks County Senior Center, just north of Hendricks Regional

Health in Danville. Contact Jay Wright, KK9L, for more information.

ONE DAY TECHNICIAN CLASS COMING IN JOHNSON COUNTY – This note from Jack

Parker, W8ISH: This may be a bit early but I wanted to bring everyone up to speed on our plans to

sponsor a one-day Technician License Class on Saturday February 9, 2013. If you know of someone

who is interested in taking the class refer them to secretary@midstatehams.org .

Seating will be limited to 25 students so they should register early to insure a spot. We require all

students to purchase the Technician Class License Manual, Second Edition.

http://www.arrl.org/shop/Ham-Radio-License-Manual-Revised-2nd-Edition/?page=1

The class will be nine hours of instruction with testing to follow. The class begins promptly at 8AM in

our meeting room at the Johnson County EOC.

Hope this helps, and thanks for the interest in the hobby!

73,

Ken Bandy, KJ9B

Wil
The Ripley County Amateur Radio Club (Osgood,Indiana 47037) offers a
Technician school in the Spring around March which is 4 weeks long 2 nights
per week, the cost is the book fee of $23.00 and then your test fee of $15 .
We also offer a General school which is in the Fall , the same fees apply
for this class also.

3200. ARRL January VHF Contest , Saturday, 1/19 1900 UTC - 1/21 0359 UTC

Yahoo group: IndyHamRadio
Date: 2013-01-11 21:24:28 UTC
From: Mark Thompson
Topic: 3200 Message: 3200
Attachments: 1 described; binary payloads are missing from this source WARC

http://www.arrl.org/january-vhf

ARRL January VHF Contest Details
For a printable copy of these rules in PDF format,
http://www.arrl.org/files/file/Contest%20Rules%20PDFs/2013/2013-JANVHF-Rules.pdf

1. Objective: To work as many amateur stations in as many different 2 degrees x 1 degree grid squares as possible using authorized frequencies above 50 MHz. Foreign stations work W/VE amateurs only.
2. Date and Contest Period: The date will be announced annually by the ARRL but will generally be the third or fourth weekend in January. Begins 1900 UTC Saturday, ends 0359 UTC Monday (January 19-21, 2013).
3. Entry Categories:
	3.1. Single Operator (spotting assistance is NOT permitted)
		3.1.1. High Power (1500 W PEP or maximum power allowed by your Amateur license, whichever is less)
		3.1.2. Low Power (200 W PEP on 50/144 MHz; 100 W PEP on 222/432 MHz; 50 W PEP on 902 MHz and higher)
		3.1.3 Portable (10 W PEP or less, portable power source, portable antennas,cannot set up at a permanent station location)
		3.1.4. 3-Band (6m, 2m a & 432 MHz only; 100 W or less on 6m/2m, 50 W or less on 432 MHz.)
		3.1.5. FM Only (6m-446 MHz, 100 W or less on all bands)
Note: Single Operator stations that use spotting assistance will be placed in the Multioperator or Limited Multioperator category, based on bands and power used.
	3.2. Rover.
		3.2.1. Rover (1 or 2 operators, all bands above 50 MHz, 1500 W PEP ormaximum power allowed by your Amateur license, whichever is less)
		3.2.2. Limited Rover (1 or 2 operators, 6m - 432 MHz only; 200 W PEP or less on6m/2m, 100 W PEP or less on 222/432 MHz.
		3.2.3. Unlimited Rover (all bands above 50 MHz, 1500 W PEP or maximumpower allowed by your Amateur license, whichever is less)
	3.3. Multioperator (spotting assistance is permitted. Includes Single Operators entrantsthat use spotting assistance)
		3.3.1. Multioperator (1500 W PEP or maximum power allowed by your Amateur license, whichever is less)
		3.3.2. Limited Multioperator (Limited to any 4 bands above 50 Mhz, 1500 W PEP or maximum power allowed by your Amateur license, whichever is less)
4. Exchange:
	4.1. Maidenhead grid-square locator (see www.arrl.org/grid-squares)
	4.2. Exchange of signal report is optional.
5. Scoring
	5.1. QSO points:
		5.1.1. Count one point for each complete 50- or 144-MHz QSO.

5.1.2. Count two points for each 222- or 432-MHz QSO.

5.1.3. Count four points for each 902- or 1296-MHz QSO.

5.1.4. Count eight points for each 2.3 GHz (or higher) QSO.

5.2. Multiplier: The total number of different grid squares worked per band. Each gridsquare counts as one multiplier on each band it is worked.

5.3. Final score: Multiply the total number of QSO points from all bands operated by the total number of multipliers for final score.

5.4. Rovers only: The final score consists of the total number of QSO points from all bands times the sum of unique multipliers (grid squares) worked per band (regardless of which grid square they were made in) plus one additional multiplier for every grid squarefrom which they successfully completed a contact.

5.4.1. Rovers are listed in the contest score listings under the Division from whichthe most QSOs were made.

6. Reporting:

6.1. Email electronic Cabrillo-formatted logs to JanuaryVHF@...; hand-written paper logs or diskettes should be mailed to ARRL January VHF Contest, 225 Main St, Newington, CT 06111.

6.2. Entries that have been electronically generated must submit their log file in the Cabrillo file format. Paper printouts of electronic files are not acceptable substitutes.Logs created with word processing or spreadsheet software are considered electronic logs and must be submitted in Cabrillo format.

6.3. Entries must be emailed or postmarked no later than 0359 UTC Wednesday, February 20, 2013.

6.4. Entries may be submitted using the web applet at www.b4h.net/cabforms

6.5. Rovers who submit scores for the club competition must submit a second summary sheet indicating QSOs and scoreif they make any contacts from outside of the club territory. Indicate clearly on the summary sheet and in log if the log is the total entry or that portion to be counted for the club score.

7. Miscellaneous:

7.1. Stations may be worked for credit only once per band from any given grid square,regardless of mode. This does not prohibit working a Rover station from more than one grid square with the same call sign.

7.2. All stations may have only one signal per band (6, 2, 11/4, etc) at any givenregardless of mode.

7.3. Multioperator stations may not include QSOs with their own operators except onfrequencies higher than 2.3 GHz. Even then, a complete, different station (transmitter,receiver and antenna) must exist for each QSO made under these conditions.

8. Awards: Certificates will be awarded in the following categories:

8.1. Single Operator.

8.1.1. Top Single Operator entrant in each ARRL/RAC Section for High and Low Power.

8.1.2. Top single operator on each band (50, 144, 222, 432, 902, 1296 and 2304-and-up categories) in each ARRL/RAC Section where significant effort orcompetition is evident. (Note: Since the highest score per band will be the award winner for that band, an entrant may win a certificate with additional single-bandendorsements.) For example, if KA1RWY has the highest single-operator all-band score in the CT Section and her 50- and 222-MHz scores are higher than any other CT single operator’s, she will earn a certificate for being the single-operator Section leader and endorsements for 50 and 222 MHz.

8.2. Top Single Operator, Portable entrant in each ARRL/RAC Section where

significant effort or competition is evident. (Single operator portable entries are not eligible for single-band awards.)

8.3.Top Single Operator, 3-Band entrant in each ARRL/RAC Section where significant effort or competition is evident.(Single Operator, 3-Band entries are not eligible forsingle-band awards.)

8.4. Top Single Operator, FM Only entrant in each ARRL/RAC Section where significant effort or competition is evident. (Single Operator, FM Only entries are not eligible forsingle-band awards.)

8.5. Top Rover, Limited Rover and Unlimited Rover entrant in each ARRL Division and Canada where significant effort or competition is evident. (Rover entries are not eligiblefor single-band awards.)

8.6. Top Multioperator score in each ARRL/RAC Section where significant effort orcompetition is evident. (Multioperator entries are not eligible for single-band awards.)

8.7. Top Limited Multioperator in each ARRL/RAC Section where significant effort or competition is evident. (Limited Multioperator entries are not eligible for single-bandawards.)

8.8. Top DX stations where significant effort or competition is evident.

9. Other:

9.1. See “General Rules for All ARRL Contests” and “General Rules for ARRL Contests on bands above 50 MHz (VHF)”

9.2. For more information contact contests@... or (860) 594-0232.

This was from the president of TARA, K9HER:

The telling of sad news is never an easy thing. I'm writing to you this evening to inform you that one of our fellow hams and TARA members has passed away.

Ernest Clark, KB9SKI, is now a silent key. He has been a very active ham in this area for many years, an ARES member since its inception, an active TARA member, a net control for the Hamtivity Net, and involved in a number of community efforts. His presence among us will be missed.

Details about the arrangements are not yet available, but please consult local news outlets in the next day or two for more information. Our thoughts and prayers go out to his family and friends.
73
K9HER

Note: Ernest was the treasurer of the TARA. Just saw him at the meeting last week. He was the past president of Midstates ARC.

I was looking around for something interesting to possibly entertain my grandson with, and found this:

http://tinyurl.com/a8cfbrw

It's a very inexpensive crystal radio kit that we can build together, less than $20 shipped.

Looks like fun to me!

I think after we have it done, I will make him a log book and ask him to start logging the AM BC stations he can copy, and when he gets to 25, 50, etc Grandpa will print him up an award.

Ernest B. Clark

March 15, 1958 - January 13, 2013
Lafayette, Indiana

Ernest B. Clark, 54, of Lafayette, died suddenly on Sunday, January 13, 2013. He was a native of Knoxville, Tennessee.Ernest married Sara Core in 1989, and they were blessed with two children, Victoria and John. Also surviving Ernest are his two brothers and three sisters.

Ernest was a graduate of the University of Tennessee and earned his M.S. from the University of Illinois. He was employed as a software engineer at Landis & Gyr. He was a member of the Church of the Blessed Sacrament in West Lafayette where he served as a cantor and choir member. Ernest was also active in TARA and ARES. Ernest participated along with his family in medieval re-enactments as a bard.

Family will receive friends from 11 a.m. - 1 p.m. on Friday, January 18, at the Church of the Blessed Sacrament followed by a Mass of Christian Burial at 1 p.m. with Father David Buckles officiating. In lieu of flowers, contributions may be made to the ErnestClark/Emil Allzuwissender Memorial Fund for the children's education at Purdue Federal Credit Union, P.O. Box 1950, West Lafayette, IN 47996. Hippensteel Funeral Home entrusted with care. Share memories and condolences online at http://www.hippensteelfuneralservice.com

NOTE: not only was Ernest a ham, he was the treasurer of TARA, the past president of Midstates ARC as well. He was active in the Society for Creative Anachronism (SCA) and was a skilled musician.

3212. FS: Icom IC 228H Mobile 2m Transceiver

Yahoo group: IndyHamRadio
Date: 2013-01-31 00:22:25 UTC
From: Brian
Topic: 3212 Message: 3212

The IC 228H offers a spectacular array of features for the mobile ham radio operator. It's a compact, high power rig (45w baby), with a simple panel design, 20 memory channels for all the action on the local repeater scene, a call channel, TWO, yes TWO scan functions provide for both a programmed scan and a memory scan, during VFO operation the Priority Watch function keeps and eye on memory channels in sequence, a memory channel, OR the call channel every 5 seconds so you can wait for a call from a station while in contact with another station...and that's not all....TWO power levels...5w LOW and 45w HIGH

Yes this radio has a lot of experience on the air, and the LCD display backlight doesn't work anymore...probably needs a new light...you MIGHT get a new light at Harbor Freight or maybe Kroger but I can't make any promises. Power cable on it is terminated in an Anderson Power Pole...but the connector is a little bit loose so you might want to replace it or tighten it or just wrap it up in 200 MPH NASCAR tape. YOU CAN READ THE LCD IN DAYLIGHT but no dice in the dark.

FREE Microphone, FREE Copy of the ORIGINAL manual, and FREE advice is included with your purchase of this Amateur Radio Classic....with the right cabling you can even use this rig on PACKET RADIO...just add the right cabling, a TNC, power supply, antenna, and computer with a serial port and you'll be on the PACKET network in no time.

See these spectacular specifications:

Receive: 138Mhz - 174 Mhz (YES!!! YOU CAN PICK UP NATIONAL WEATHER SERVICE BROADCASTS!! IN YOUR CAR!!)
Transmit: 144Mhz - 150Mhz (According to the manual)

Power: 13.8 VDC +/- 15% (Negative Ground - Important to note if you are going to put this in an old Ford Tractor)

$50.00 cash money and it is all yours - Yup...fifty bucks. And it works. First email that says I'LL TAKE IT gets it.

3218. February 23, 2013 Ham Radio Dinner - Indy

Yahoo group: IndyHamRadio
Date: 2013-02-06 00:51:06 UTC
From: Rhonda
Topic: 3218 Message: 3218

Greetings!

The February dinner will be held on 2/23 as we were not having any luck getting reservation for a group on Valentine's weekend. This month we are going to Iaria's Italian Restaurant, located at 317 S. College Ave, Indianapolis, Indiana 46202.

If you have not joined us before, we get together monthly for dinner. This is very informal and families are invited. Conversation is general rather than ham radio related so that everyone can participate.

Hope to see you all there!

73,

Steve & Rhonda

3220. W9RXR Hamfest Preview

Yahoo group: IndyHamRadio
Date: 2013-02-15 02:35:43 UTC
From: Bob Burns W9RXR
Topic: 3220 Message: 3220

Here's a list of some of the items I'll have on my table at the Brownsburg Hamfest this Saturday.

For more information about the hamfest, see: http://hcars.org/hamfest

All items subject to prior sale. If you don't like my price, make me an offer. If you can't make it to the hamfest, send an email to w9rxr@....

AvMap Geosat G6 APRS, Mapping GPS receiver with APRS functions, two-way data communications with Kenwood APRS radios and Byonics TinyTrak4, can display waypoints on the map for received APRS beacons, includes suction cup mount, charger, DC power cable, interconnect cable for APRS radios. Asking $350.

Heathkit IM-4180 FM Deviation Meter, 25-1000 MHz carrier frequency, 2-75 kHz deviation range, modified with internal power supply and internal speaker, includes copy of complete manual. $169.95 in 1983 Heathkit catalog. Asking $50.

Icom CT-17 level converter, RS-232 to Icom CI-V, can control up to four radios, original box and manual, no cables. Asking $20.

Icom IC-2720H dual-band mobile, 50 watts on 2m, 35 watts on 440, dual receive, separate control head, original box and manual, copy of programming software on CD. Asking $300.

Icom SM-8 dual desk-top microphone, connects to two radios via two 8-pin round mic connectors, switch to select which radio to talk on, controls on the base for level and tone, mic is on a flexible gooseneck for easy positioning. These mics go for $110-150 on the used market, I'm asking $75 for this one.

Icom SP-20 desk speaker, 2 inputs, high and low filters, tilt-up feet, 5" speaker, some scratches on the sides, original box and manual. Well over $200 new, I'm asking $75.

Uniden BCD396T handheld scanner, digital trunktracker, 25 to 1300 MHz except cellular telephone, supports rebanding, decodes APCO P25 systems, control channel trunking, Close Call frequency finder, CTCSS/DCS decode, search or scan, SAME weather alert, back-lit display and keypad, uses 3 AA batteries, PC programmable. Asking $300.

Yaesu FT-50 dual-band handheld, 5 watts, 100 channels, includes used NiMH battery pack, AA dry cell battery holder, charger, speaker-mic, leather case, programming cable, and other accessories. Asking $125.

From: Mike Wolford
Topic: 3220 Message: 3221

Wow, I could add:

Kenwood TS-50 with service manual, mobile mount, and matching AT-50 automatic antenna tuner. ($500.00 (???))

The TS-50 and tuner combination was part of an estate sale. I had to replace the internal battery, and a fuse that powered the auto tuner. Works well! I broke a contest pileup with 5 watts and a vertical!

TM-D700 dual band mobile rig. ($250.00 (???))

The TM-D700 was purchased new from R&L, as a self-motivation gimmick to get me back active in radio. It rode around (un-mounted) in the car with me for about two weeks. When the car needed to go into the shop for some repair work, the radio taken out of the car and placed on a shelf where it has lived ever since. Aside from several years of dust buildup, the radio is like new --- still has the protective cellophane on the display head.

I probably will NOT be at the hamfest but if anybody would like to make a "realistic" offer send me a note! I've not been active so am pretty much "out of the loop" as far as what current values might be. But you never know when I may "NEED" more RC stuff!!! (I don't "NEED" to sell them. I'm just not using them, so they should be re-located to a good home!)

(I'm still into radio --- but the radio that I use now controls airplanes!)

Yeah, and I know a lot of hams are concerned about that.

I don't have any inside knowledge of what the
producers and writers have in mind for future
episodes. However, given that some of the story
lines in the show are somewhat serial, it
wouldn't surprise me if this comes up. I can see
a scenario where Mike finds out that Mandy's been
messing with this ham radio station and punishes her for it. Ya never know.

Folks!
The message below from Gary, KN4AQ, contains a link to his Episodes 74 & 75, which cover Ham Radio at the Boston Marathon. Hear from the Top Ham guys in these episodes. The first one is 75 minutes and the second one is 71 minutes. But, well worth your time. Each one has a little different take. Well worth the watch. I recommend everyone watch them from start to finish. Very valuable and inspiring episodes. Ham Radio at its best - The unsung heros, who seek no recognition. They just do their job.

NOTE: If you receive more than one of this message it is because you belong to more than one group.

********** HAMRADIONOW EPISODES 74 and 75: Online NowWe all know what happened at the Boston Marathon. What didn't make the news is the communications assistance that hams have been providing the event for over 30 hears. It's become one of the largest ham radio public service events in the nation.This year, hams were operating one of the Net Control stations just a few hundred feet from the bomb blasts near the finish line.HamRadioNow talked to three hams who were involved in different aspects of the event.Paul Topolski W1SEX was at the Finish Line, supervising the Net Control operation for the hams in that area. Steve Schwarm W3EVE was at a remote location, overseeing another net supporting the First Aid and "fluid" stations, and bus transportation. And Tim Carter W3ATB was at a more distant aid station.We learn what happened before and after the bombs went off. We also go deeper to understand what goes into Amateur Radio support for a huge operation like this.HAMRADIONOW is an online podcast from Amateur Radio//Video News. It's free to watch on the web. If you like what you see, we request your support. Just go to our web site, www.HamRadioNow.tv, and 'click the pig.' That'll take you to the support page. Whatever you think it's worth.
Thanks and 73,
Gary KN4AQHamRadioNow.TV

Subject: [D-STAR_23cm] ID-31A to be given away during Dayton D-STAR Class

If you've registered for the D-STAR training at the Drury Inn Ballroom in Dayton during Hamvention on Friday, May 17th, from 8:00am until 11:00am,
you already have a chance to win an Icom ID-31A handheld radio to be given away during the class.
There is still time to register for this comprehensive D-STAR class, but seats are filling up fast.

This training will provide the basics for new D-STAR users guiding them through the callsign registration process, getting on the air. easy programming of your D-STAR radio including the ID-31A
and ID-51A radios, and get the most out of handhelds or mobiles.

More experienced users will benefit from topics including the DV Dongle, DV Access Point, making a hotspot with a Raspberry Pi, D-STAR nets,
using D-STAR's high and low speed data features including the ID-1 radio, and where to find D-STAR resources to get the most out of D-STAR.

Class size is limited and pre-registration is required. The cost of the class is $15.00 and all attendees will receive all course materials and a chance to win the Icom ID-31A.

To register and pay class fee by PayPal, go to
http://www.dstarinfo.com/d-star-infocon--dayton-hamvention-2013.aspx.

3243. Indiana QSO Party

Yahoo group: IndyHamRadio
Date: 2013-05-05 01:59:45 UTC
From: Brian
Topic: 3243 Message: 3243

I only had a couple of hours today to play in the QSO Party but I still managed to make about 50 contacts, 10 of which were 5w SSB. I ran single op QRP as usual. I just sent in my log and the mailer at HDXCC sent this error:

Delivery to the following recipient failed permanently:

inqp@...

Technical details of permanent failure:
Google tried to deliver your message, but it was rejected by the server for the recipient domain hdxcc.org by smtp.wintek.com. [199.233.104.106].

The error that the other server returned was:
550 5.7.1<inqp@...>... Relaying denied

That's going to make it hard for anyone to send in a log file.

I'll try sending it again later.

I worked the QSO party for about 3 hours in the late afternoon and another 2.5 hours tonight. Made over 100 contacts on 40 and 75m SSB with 100 watts into a low dipole. Didn't work as many Indiana counties as I would have liked, but many of them were only activated by mobiles, which really shortens the window of opportunity, and most of the mobiles were CW only. I did work both KB9BVN and WS9H!

Bob thanks for the update on the log submissions, and THANKS for Hendricks County yesterday. I missed working Rhonda somehow but I wasn't on the air very much. Just an hour in the mid afternoon and an hour in the evening. Plugged in the mic for once and managed about ten phone contacts, the rest were CW....all of it on 40m, all of it at 5w to the attic dipole. With that setup I never win, but I always have fun. Rig was my Elecraft K2, now almost 10 years old, but only got 21 counties.

3247. Re: [IndyHamRadio] Indiana QSO Party

Yahoo group: IndyHamRadio
Date: 2013-05-05 12:13:46 UTC
From: Don Evilsizor
Topic: 3243 Message: 3247

Cathy WB8ORR & me worked as a husband and
wife team at home and enjoyed the event a

lot more this year.

A big thank you to all those who sponsor
and organize the INQP.

We are not contesters nor DX'ers and primarily
just do nets, radio traffic ragchew, plus Packet
and other digital modes. In past years doubt

if we got much over 10 total contacts INQP.

Guess I can readily understand how contesters
are probably more efficient in working a

number of contacts in short order. But that
did not discourage us in any manner and we
learn from experience.

So this year we decided to give it a try and
dedicated a few more hours and forget the
mowing & garden along with other domestic chores.

We worked primarily SSB & some CW on 40M most
of the time in this event.

Think we made 51 counties according to our log
program using the MicroLog program by WA0H. Not
even sure if that program does the Cabrillo

format at this time? Maybe we can figure it out
to send in a acceptable report later.

Was surprised how many contacts we made with

the Indiana Traffic Net stations (ITN) that
are on my normal roll call.

THANKS TO ALL FROM

Don KA9QWC & Cathy WB8ORR
The Evilsizor Team in Whitley County

From: WS9H
Topic: 3243 Message: 3248

I went back and looked at my log again as I didn't think my numbers looked right. I ended up 127 contacts and 62 counties. Not too bad for a beginner running low power from one of the most popular counties.

Like Brian, I know I'm nowhere near the top but I sure had a lot of fun doing this. Next year I will be a little better prepared and see how I do.

Log will be submitted after I figure out if the MARC group is submitting with the club name. If they are, I will submit under the club. If not, I will submit on my own.

Thanks to everyone who got on the air!

73,

Rhonda

3250. IRC Bus to Dayton

Yahoo group: IndyHamRadio
Date: 2013-05-05 17:47:02 UTC
From: Rhonda
Topic: 3250 Message: 3250

Greetings!

The Indianapolis Radio Club still has tickets available for the bus to the Dayton Hamvention. The trip is Saturday, May 18 with pickup points at Peddlers Mall and Southern Plaza. The bus stops for breakfast on the way over and dinner on the way back. It also drops you at the door so there is no long walk in or parking in the mud lot.

For more info, please email me...ws9h@....

Thanks and 73,

Rhonda
WS9H

Rhonda,

Glad to work you from my portable operation on the Vigo/Vermillion county line.

Go ahead & submit your log with your club listed. It will not affect your individual standing, but will add to the club's aggregate score.

Hope to see you again next year It's a lot of fun.

Greetings!

The Indianapolis Radio Club still has tickets available for the bus to the Dayton Hamvention. The trip is Saturday, May 18 with pickup points at Peddlers Mall and Southern Plaza. The bus stops for breakfast on the way over and dinner on the way back. It also drops you at the door so there is no long walk in or parking in the mud lot.

For more info, please email me...ws9h@... <mailto:me...ws9h%40arrl.net>
.

Thanks and 73,

Rhonda

Subject: [D-STAR_23cm] D-STAR at Dayton Hamvention

Please distribute widely

Here’s the updated list of activities that we know about the Dayton Hamvention®, please send any updates to info@...
All items are subject to change. Please check www.DSTARInfo.com for the latest information.

Schedule of Events

Thursday, May 16th
7:00PM – Pre-Hamvention D-STAR Meet, Greet, and Eyeball QSO
Marion’s Piazza 1320 N Fairfield Rd, Beavercreek, OH 45432 (39:43.596N 084:03.192W) (937) 429-3393

Friday, May 17th
8:00AM – D-STAR InfoCon 2013 (Registration Required)
Drury Inn Ballroom
A three hour class for beginning and more experienced D-STAR users to help you get started and get the most from your D-STAR radio. An Icom ID-31A will be given away to one lucky class participant during the class.
12:45PM – D-STAR Forum
Forum Room 1 Hara Arena
Moderator: Robin Cutshaw, AA4RC
Speakers: John Davis, WB4QDX, Brian Hoyer, K7UDR, John Hays, K7VE, Robin Cutshaw, AA4RC
D-STAR continues to grow in popularity with over one thousand interconnected gateways and over twenty-five thousand registered users. The last year has seen new hardware and software offerings that continue to expand the capabilities of this already feature rich protocol. The speakers for this forum will review the things you might have missed in the last year and announce some exciting new hardware and software.
7:00PM – Friday Night D-STAR
Drury Inn Ballroom, 6616 Miller Lane, Dayton, OH 45414
Exciting list of speakers
Opportunity to speak to other D-STAR enthusiasts
Icom ID-51A to be given away

NOTE: The following statement was originally released by the
Texas Interconnect Team (K5TIT).
http://www.k5tit.org/

Texas Interconnect Team Announces Dayton Kids Reflector for Dayton Hamvention® 2013

CQ D-STAR, CQ D-STAR – The Texas Interconnect Team (K5TIT) announces
that for the Dayton Hamvention® weekend, REF033B will officially be the Dayton Kids
Reflector.
Megan McClellan, K5MEM, will spearhead the project from the Youth Booth
starting Friday morning and continuing during show hours on Saturday and Sunday.

The objective is to give the young future hams an opportunity to experience the fun and
excitement of talking with someone in a far-away place, using the magic of Amateur Radio.
The participants in the Youth area will have access to handheld radios and a DVAP,
and will operate under the supervision of an experienced Control Operator.

To participate and help show the wonders of Amateur Radio, connect your
DVDongle, DVAP, Hot Spot, or D-STAR Gateway to REF033B during event hours Friday, Saturday,
and Sunday.
If nobody is talking, give them a call - somebody has to call CQ!

Event hours are (in EDT):
• Friday: 9:00 a.m. - 6:00 p.m.
• Saturday: 9:00 a.m. - 5:00 p.m.
• Sunday: 9:00 a.m. - 12:00 Noon

Join the fun! See you on the air...

3257. New CW Transceiver Kit

Yahoo group: IndyHamRadio
Date: 2013-06-02 16:06:47 UTC
From: Brian
Topic: 3257 Message: 3257

The Four State QRP Group is pleased to announce the availability of the Cyclone 40 Transceiver.

This innovative and simple transceiver by NM?S is an enhanced version of Dave's QRP ARCI's 72 Part Challenge Design Contest entry in 2010. This is a complete kit, including the enclosure. The price is a buck a part plus shipping, $104 total, for domestic sales. Purchasing info and more details are on the kit's home page herehttp://www.4sqrp.com/cyclone.php Here are some of the design features:

. All through hole parts and easy assembly. NO SMD parts
. Less than 100 components
. Superhet receiver with very good sensitivity and selectivity
. "Perfect" QSK very high speed and absolutely seamless operation.
. VFO tunes the entire 125 kHZ CW segment of the 40M band at a comfortable tuning rate.
. Transmitter output is nominally 4W. Those built so far are running ~ 4.6W
. Frequency readout is included so you know where you are at all times.
. A very attractive PCB enclosure is included, asy to assemble, looks great.
. All parts are included, jacks, knobs, enclosure, transformers, everything. This is a complete kit, including a black enclosure with white silkscreened labels.

3258. Fwd: Central State VHF Conference, Elk Grove Village, IL, July 25 - 28

HI folks;

I would like to extend an invitation to your membership to consider attending the Central States VHF Society conference this summer, being held in the greater Chicago area. Please distribute this invite to your members via your club remailer. I have copied below the general information from the CSVHFS organizing committee;

Greetings !

The online registration for the 2013 Central States VHF Society Conference is now available. The 2013 Conference will be held near Chicago at the Elk Grove Village, IL, Holiday Inn from Thursday July 25th until Sunday July 28. This year's Conference location allows for free Hotel transportation to and from the Chicago-O'Hare Airport and has easy access from major interstate routes.

Activities begin with onsite check-in and registration Thursday afternoon with the offering of a trip to the Schaumburg Boomer's baseball game at 5PM. Friday morning's activities feature the Antenna Range (144MHz-24Ghz) measurements, Rover Row, Dish Display and Noise Figure Measurement Contest.

In addition to the world-class technical presentations on topics about activity on the amateur bands VHF/UHF and above; this year's conference will feature a return of the free-admission "VHF-101" introductory session on Saturday Morning !

For a up-to-date schedule of events please check the Central States VHF Society website at; http://www.csvhfs.org/2013conference/agenda.html

The 2013 Conference is honored to welcome active VHF operator and CEO of the American Radio Relay League, Mr Dave Sumner, K1ZZ as the Saturday Banquet speaker. This will be a presentation you will not want to miss !

The Family Program includes the Schaumburg Boomer's baseball game on Thursday evening, a Friday trip to downtown Chicago's famed Michigan Avenue Shopping District and a Saturday bus trip to the Chicago Museum Campus that includes the Field Museum of Natural History, the Adler Planitarium, the John G Shedd Aquarium and the Chicago Museum of Modern Art.

This year we will be offering a (free) Sunday tour of the Fermilab National Accelerator in Batavia Illinois. There will be a group car-pool

from the Hotel at 10AM Sunday and although there is no bus transportation arrangements can be provided for the return trip to O'Hare airport after the tour. This tour will present a glimpse into the hardware behind the scenes in the world of High Energy Physics.
Included will be a short stop by the superconducting RF laboratory - where the RF is REALLY cool...
A pair of comfortable walking shoes is suggested for the 3 hour tour.

The Central States VHF Society registration page can be found at ;

http://www.csvhfs.org/2013conference/2013Registration.html

Reservations for the Elk Grove Village Holiday Inn
1000 Busse Rd, Elk Grove Village Illinois can be made using the special reservation group code " VHF"
by calling (800) 972-2494 or by using the web link;
http://www.ihg.com/holidayinn/hotels/us/en/elk-grove-village/chieg/hoteldetail?groupCode=VHF
The special group rate for the Conference is $95 per night.

Should you have any questions, problems or special requests please do not heistate to contact the 2013 Conference Chairman directly by email at W9XA@...

Please make early plans to attend. We look forward to seeing you in July for the 2013 Central States VHF Society Conference near Chicago !

For the 2013 CSVHF Committee-
73, Kermit Carlson W9XA

3259. ARRL June VHF QSO Party, Saturday, 6/8 1800 UTC - Monday, 6/10 0300 UTC

Yahoo group: IndyHamRadio
Date: 2013-06-08 03:33:39 UTC
From: Mark Thompson
Topic: 3259 Message: 3259

http://www.arrl.org/june-vhf

ARRL June VHF QSO Party Rules

1. Objective:
To work as many amateur stations in as many different 2 degrees by 1 degree grid squares as possible using authorized frequencies above 50 MHz. Foreign stations work W/VE amateurs only.
2.Date and Contest Period: The second full weekend in June. Begins 1800 UTC Saturday, ends 0300 UTC Monday (June 8-10, 2013).
3.Entry Categories:
3.1. Single Operator: One person performs all transmitting, receiving, spotting, and logging functions as well as equipment and antenna adjustments. Only one transmitted signal is permitted at any given time. Use of spotting assistance or nets (operating arrangements involving other individuals, DX-alerting nets, internet chat rooms, packet, etc) is not permitted.
3.1.1. Single Operator Low Power:
3.1.1.1. Power limits on any band may not exceed the following:
3.1.1.1.1. 50 MHz and 144 MHz--200 W PEP.
3.1.1.1.2. 222 MHz and 432 MHz--100 W PEP.
3.1.1.1.3. 902 MHz and above--50 W PEP.
3.1.2. Single Operator High Power: Power limits on any band exceeds the limits for the Single Operator Low power.
3.1.3. Both Single Operator High and Low Power stations compete for all-band and single-band awards.
3.1.4. Overall and single-band winners are recognized both in QST score listings and in awards offered.
3.2. Single Operator Portable:
3.2.1. Ten (10) W PEP output or less.
3.2.2. Portable power source.
3.2.3. Portable equipment and antennas.
3.2.4. Single Operator Portable stations must operate from a location other than a permanent station location.
3.2.5. Single Operator Portable stations may not change locations during the contest period outside of the original 500-meter diameter permitted circle.
3.3. Single Operator, 3-Band:
3.3.1. Restricted to 50, 144 and 432 MHz.
3.3.2. Power limits are 100 W PEP on 50 and 144 MHz, 50 W PEP on 432 MHz.
3.4. Single Operator, FM Only

3.3.1. All QSOs must be made using Frequency Modulation (FM).
3.3.2. Restricted to 50, 144, 222 and 440 MHz.
3.3.3. Power limits are 100 W on all bands.
3.5. Rover: A rover is comprised of no more than two operators that moves among two or more grid squares during the course of a contest. An operator may perform any or all rover functions, but a driver's function shall be limited to driving the vehicle. Drivers may be switched out during the event. Any number of observers is also allowed, however observers may not perform any rover function at any time. Rover vehicles with only one occupant are allowed to perform all functions listed above.
3.5.1. A rover vehicle may transport only one station using a single call sign. An exception is provided for in "General Rules for All ARRL Contests" number 3.5 (Family Rule).
3.5.2. A rover may not operate with more than one call sign.
3.5.3. Rover vehicles must transport all the equipment, power supplies, and antennas used at each operating site.
3.5.4. Rovers MUST sign "rover" on Phone and /R on CW and digital modes after their call sign.
3.5.5. All Rovers are encouraged to adopt operating practices that allow as many stations as possible to contact them.
3.5.6. Rover operators may submit separate logs for single operator (fixed station) in addition to their rover entries. Rovers submitting a score for inclusion in a club competition must also include a secondary summary sheet indicating the portion of the score that counts for the club score if any of the QSOs submitted take place outside of their club's territory.
3.5.7. Rovers are permitted to use APRS. Rovers using APRS transmit only their call sign and position. Any multi-op station may access rover APRS data directly or via the Internet.
3.5.8. A rover may not make more than 100 QSOs with any other one rover.
3.6. Limited Rover. Same as the "Rover" class above, but competes using only the lowest four bands available for any given contest (6M - 432 MHz for VHF+ contests, 222MHz - 1.2 GHz for August UHF). Output power limits shall be the same as those defined for the Single Operator Low Power category (3.1.1)
3.7. Unlimited Rover. Same as “Rover” class above, but Unlimited Rovers may use more than two operators and are exempt from rules 3.5.3 and 3.5.8.
3.7.1. Unlimited Rover scores may NOT be applied to a club score for Club Competition.
3.8. Multioperator (includes Single Operator stations that use spotting assistance:
3.8.1.Multioperator (Unlimited): Stations submit logs with more than four bands used.
3.8.2.Limited Multioperator: Stations submit logs with a maximum of four bands used. (Logs from additional bands used, if any, should be included as checklogs.)

4.
Exchange: Grid-square locator
(see April 1994 QST, p 86).
4.1. Exchange of signal report is optional.
5. Scoring:
5.1. QSO points:
5.1.1.Count one
point for each complete 50- or 144-MHz QSO.
5.1.2. Count two points for each 222- or
432-MHz QSO.
5.1.3.Count three
points for each 902- or 1296-MHz QSO.
5.1.4.Count four
points for each 2.3 GHz (or higher) QSO.
5.2. Multiplier:The
total number of different grid squares worked per band. Each 2 degrees by 1
degree grid square counts as one multiplier on each band it is worked.
5.3. Final score:Multiply the total number of QSO points from all bands operated by
the total
number of multipliers for final score.
5.4. Rovers only:The
final score consists of the total number of QSO points from all bands times the
sum of unique multipliers (grid squares) worked per band (regardless of which
grid square they were made in) plus one additional multiplier for every grid
square from which they successfully completed a contact.
5.4.1.Rovers are
listed in the contest score listings under the Division from which the most QSOs
were made.
6. Reporting:
6.1.Entries may be submitted as follows:
6.1.1.Electronic submissions in the
Cabrillo format may be emailed to JuneVHF@...
6.1.2.Hand
written paper logs or diskettes mailed to June VHF, ARRL, 225 Main St,
Newington, CT 06111.
6.1.3.Web entries
submitted via the web-based applet.
6.2.Entries that have
been electronically generated must submit their log file in the Cabrillo file
format. Paper print outs of electronic files are not acceptable substitutes.
6.3.Entries must be emailed or postmarked no later than 0300 UTC Wednesday, July 10,
2013. Late logs may be designated as checklogs only.
7.Miscellaneous:
7.1.Stations may be
worked for credit only once per band from any given grid square, regardless of
mode. This does not prohibit working a station from more than one grid square
with the same call sign (such as a Rover).
7.2.Only one signal
per band (6, 2, 11/4, etc) at any given time is permitted, regardless of mode.
7.3.Multi-operator

stations may not include QSOs with their own operators except on frequencies higher than 2.3 GHz. Even then, a complete, different station (transmitter, receiver and antenna) must exist for each QSO made under these conditions.

7.4.Forms may be obtained by:

7.4.1.Downloading the form here.

7.4.2.Sending an SASE with 2 units of postage to June VHF Form Request, ARRL, 225 Main St, Newington, CT 06111.

8.Awards: Certificates will be awarded in the following categories:

8.1. Single Operator

8.1.1. Top Single Operator Low and High power entry in each ARRL/RAC Section.

8.1.2.Top Single Operator Low and High power on each band (50, 144, 222, 432, 902, 1296 and 2304-and-up categories) in each ARRL/RAC Section where significant effort or competition is evident. (Note: Since the highest score per band will be the award winner for that band, an entrant may win a certificate with additional single-band endorsements.) For example, if W1INF has the highest Single-Operator all-band score in the CT Section and his 50- and 222-MHz scores are higher than any other CT single operator's, he will earn a certificate for being the single-operator Section leader and endorsements for 50 and 222 MHz.

8.2.Top Single-Operator Portable in each ARRL/RAC Section where significant effort or competition is evident. (Single-operator Portable entries are not eligible for single-band awards.)

8.3.Top Rover, Limited Rover and Unlimited Rover in each ARRL Division and Canada where significant effort or competition is evident. (Rover entries are not eligible for single-band awards.)

8.4.Top Multioperator score in each ARRL/RAC Section where significant effort or competition is evident. (Multioperator entries are not eligible for single-band awards.)

8.5.Top Limited Multioperator in each ARRL/RAC Section where significant effort or competition is evident. (Limited multioperator entries are not eligible for single-band awards.)

8.6.Plaques, if sponsored, will be awarded in the following categories:

8.6.1. Top Overall Single Operator (both High and Low Power) scorers.

8.6.2.Top Overall Single Operator Portable scorer.

8.6.3.Top Overall Rover, Limited Rover and Unlimited Rover scorers.

8.6.4.Top Overall Multi-Operator scorer.

8.6.5. Top Overall Limited Multi-Operator scorer.

8.6.6. The leading scorer in each entry category for each ARRL Division, Canada, and DX (non-W/VE) station.

9. Other:

9.1. See "General Rules for All ARRL Contests" and "General Rules for ARRL Contests on bands above 50 MHz (VHF)"

3260. Ham Radio Dinner June 15

Yahoo group: IndyHamRadio
Date: 2013-06-09 17:06:17 UTC
From: Rhonda
Topic: 3260 Message: 3260

Greetings!

The Ham Radio Dinner group will be at Riviera Maya Bar & Grill, 8657 E. 116th St, Fishers, IN 46308 at 7pm on Saturday, June 15. This is a Mexican restaurant that came highly recommended by one of our regulars. Hope to see you all there!

3261. Fox Hunt July 6, Indianapolis

Yahoo group: IndyHamRadio
Date: 2013-06-17 00:28:57 UTC
From: Rhonda
Topic: 3261 Message: 3261

We are looking for feedback on the format from those who will be attending the Fox Hunt on July 6 at 1pm. This is what we are thinking. We are going to meet at the same place in Garfield Park where we did for the first one. Once our Fox is in place, teams (even if you are by yourself you will be your own team) will leave 5 minutes apart. Steve and I will record the leaving times and our Fox will record the arrival times. The team with the best arrival time wins.

Please let us know what you think.

Thanks,

Steve & Rhonda

News Release
Icom America Sponsors New HamStudy.org Website to Support Amateur Radio Education

Icom America, leading manufacturer of amateur (ham) radio equipment and technology, announces a sponsorship for HamStudy.org, a new website that offers free learning tools for existing and potential amateur radio operators. The website is accessible at www.hamstudy.org and was created by Richard Bateman (KD7BBC), Michael Stufflebeam (KV9G) and Rich Porter.

HamStudy.org users studying for an amateur radio license exam can choose from three online learning modules for each ham radio class: technician, general or extra. FCC Commercial Element 1, 3, 5 and 6 study modules are also available. Educational materials include flash cards, question lists and practice tests.
Users who register for a free HamStudy.org account on the site can access personalized study history and submit explanations to amateur radio questions. Website registrants may also choose to log into their account using their Google or Facebook credentials. HamStudy.org is optimized for mobile phones and tablets; additional features will be integrated to the website soon. Facebook users can receive regular site updates and study tips by "liking" HamStudy.org at www.Facebook.com/HamStudy.

Icom is committed to the amateur radio hobby and supports many organizations that provide educational material for operators of any skill or experience level. In addition to HamStudy.org, Icom has also partnered with the Ham Nation weekly netcast from TwiT.tv and the AmateurLogic.tv Internet television program. Icom has also been a proud sponsor of the Boy Scouts of America (BSA) since 1981. The company is the official amateur radio transceiver supplier for the BSA’s 2013 National Scout Jamboree.

3264. Special Event Applied for

Yahoo group: IndyHamRadio
Date: 2013-06-24 19:16:57 UTC
From: Brian Murrey
Topic: 3264 Message: 3264

I have applied for a Special Event call sign to be used on July 27th from Brazil Indiana. Should know something in about a week.

W9J - "Where's Jimmy?"

Not sure if I'll get it but here's to hopin'.

James Riddle Hoffa was born on Valentine's Day 1913 in Brazil Indiana. The man was a legend, a tough guy, a sort that demanded respect and to be reckoned with. He put Attorney General Bobby F. Kennedy in his place, and made the congress look like a bunch of morons while serving as President of the International Brotherhood of Teamsters. He went missing on July 30th, 1975 and is presumed dead.

My stepdad was a Teamster and sometime in 1970 or 1971 Hoffa spoke at a Teamster picnic in central Indiana and I was there. The only thing I remember about the picnic was the fact they had a swimming pool, and the pop and hot dogs were FREE. To a 10 year old boy in the middle of summer, it was heaven. I must have drunk a dozen ice cold cream sodas.

So to commemorate the 38th Anniversary of his disappearance, W9J will attempt to be on the air from Brazil Indiana, you're all invited.

3266. Advance Sale Tickets Indianapolis Hamfest

Yahoo group: IndyHamRadio
Date: 2013-06-26 21:19:14 UTC
From: W9FG
Topic: 3266 Message: 3266

Visit the Indianapolis Hamfest website:

http://www.indyhamfest.com/

you will find a list of Central Indiana locations to purchase advance sale tickets, a savings of $2.00 per ticket.
While at the site take a look at the list of commercial vendors, forum schedule, and testing information.
Didn’t receive a flyer about the 2013 Indianapolis Hamfest? You can view and download the flyer.

We are pleased to announce GigaParts, Huntsville, AL:

http://www.gigaparts.com/radioindex.php

will be displaying and selling at the Hamfest.

The air conditioned indoor table building is sold out, the forum schedule is full, (air conditioned forum building), acres of space for the outdoor flea market, QSL Card Checking for ARRL Awards, and Amateur Radio Testing, surely will make this the Indiana Hamfest to attend. Gates open at 6 am EDT.

3267. Fox Hunt

Yahoo group: IndyHamRadio
Date: 2013-07-07 20:34:48 UTC
From: nd9c_steve
Topic: 3267 Message: 3267

The August Fox Hunt will be Saturday, August 3 from 2pm to 4pm. We will start at Garfield Park at shelter 5 which is located at Shelby St and Raymond St.

Everyone is welcome to attend, whether or not you have equipment and/or experience.

Hope you see you there.

3268. Not Too Late, Advance Sale Tickets

Subject: [frrl] 2013 Central States VHF Society Conference July 26-28

Greetings !

The 2013 Central States VHF Society Conference committee invites you to a full weekend of VHF/UHF activity the weekend of July 26th-through-July 28th. This 47th Annual Conference is being held at the Elk Grove Village Holiday Inn at 1000 Busse Rd located at the South-West corner Route 83 and Landwehr Road in Elk Grove Village.

The activities begin Friday morning at 9AM with antenna range gain measurements and pre-amp noise figure measurement contests. Technical Programs are held Friday afternoon and all day Saturday. The detailed Agenda and full information can be found at;
http://www.csvhfs.org/2013conference/index.html

The Society is fortunate to be able to welcome noted VHF/UHF and 10 Ghz enthusiast Mr Dave Sumner K1ZZ, Chief Executive Officer of the ARRL to this year's conference as our Keynote Speaker. Please plan to attend Saturday's Banquet when you sign-up for the Conference.

Registrations for the Banquet will close on Thursday the 18th of July so please take time now to reserve your dinner selection;

http://www.csvhfs.org/2013conference/2013Registration.html

The Forum Speakers and Topics for the 2013 Central States VHF Society Conference - Chicago/Elk Grove Village will include;

James Kennedy, K6MIO(/KH6)
    Worldwide Es Propagation on 27-29 June 2012

Kent Britain, WA5VJB
    Unusual Antennas for Unusual Applications

James Froemke, K0MHC
    Where have all the ROVERS gone?
Ed Krome, K9EK
   Building and Testing VHF/UHF Power Amps based on the

Freescale LD-MOS Modules

James Kennedy, K6MIO(/KH6)
    Solar Cycle Update

Wayne Overbeck, N6NB
  Building a Tower Trailer for Roving (and Why!)

Jon Platt, W0ZQ
    Gitchi Gami and the 2012 ARRL 10 GHz Contest

Terry Price, W8ZN
    1.5 kW Larcan 222 MHz Amplifier

 Keith Pugh, W5IU
    AMSAT and ARISS Update 2013

 Al Ward, W5LUA
    Working Small Stations on 10 and 24 GHz EME with help of

WSJT

Gerald Johnson, K0CQ
    Multiple "mini"-topics (Antenna Modeling, Test "Tricks" to

better your GHz signal, Soldering)

 Central States VHF Society Sponsored Activities and Awards -

This will be s moderated session that will recognize the

2012-2013 States Above 50 MHz results, Reverse VUCC and the

2013 VHF & Up Spring Sprints. This session will extend into a
  discussion of the Future of the Spring VHF & Up Sprints.

         We look forward to seeing you at the Conference !

                                  73, Kermit Carlson W9XA

1630 - 1700 CSVHF Society Board Meeting Village Room
1700 - 1800 Social Hour - Hors d'Oeuvres and Cash Bar Atrium
1800 - 2200 BANQUET Mr. Dave Sumner K1ZZ ARRL CEO Banquet Speaker Woodfield Room
2200 Hospitality Suite Opens

SUNDAY 28 July 2013

TIME EVENT LOCATION
1030 Gather for Trip to Fermilab HOTEL LOBBY
1030 - 1130 Transportation to Fermilab is not provided

1130 - 1200 Lunch - as a group details - TBD

1200 - 1500 Fermilab Tour - FREE Batavia, IL

Updated May 3, 2012:

Technical Presentations
Presentations aren't necessarily technical. They cover the breadth of the VHF/UHF ham radio hobby. Highlights in past years have been demonstrations of Software Defined Radios, Rovers, Antennas, Contesting and Microwave Communications. Presentations vary from 15 to 45 minutes and step you through the highlights of the topic at hand, with complete texts published as articles in the Proceedings. Your speaker is available for follow-up questions throughout the remainder of the conference.
Technical Program
PRESENTATIONS:

* See Agenda
In Addition to Papers authored by the Presenters listed above we also have the additional works:
* Coming soon...

Antenna Range
Friday morning, we have an antenna range in the hotel parking lot at which you can have your own antennas tested against standards and determine gain. If you are driving to the conference, bring your antennas from 50 MHz through 47 GHz for testing. Even if you don't bring an antenna for testing, watching the range in operation teaches you about antenna theory, performance, and construction techniques. The Antenna Range also has much fine conversation and socializing during the morning.

Noise Figure Testing / Pre-amp Workshop
Saturday morning, you can learn much about Pre-amp design and performance by bringing a pre-amp for testing or tweaking. Fellow members, who are frquently engineering professionals, will assist you while you fine-tune your pre-amplifier for testing. It's fun and always increases your knowledge. Bring your pre-amps for 50 MHz through 47 GHz.
Rover Row / Dish Bowl
All Rovers are encouraged to bring their completely outfitted Rovermobiles. It's a great

way for the Rover to give a shack-tour. We will have a designated dog-pound for all Rovermobiles on Friday morning. While the Antenna Range is in operation, many attendees will come see how you conquered installation and configuration issues in your Rovermobile. Similarly, if you have a portable microwave dish setup, please bring it for show-and-tell in the dish-bowl as well. By showing your handiwork, others will gain ideas and motivation to construct their own dish systems and give all of us more operators on the high bands.

Poster Sessions / Table-Top Displays

All day Friday and Saturday, a portion of the Dealer Area will have Poster Sessions for viewing. Our concept is that some times a topic may not have enough meat for a full presentation or paper. Further, many basic VHF/UHF themes can be reviewed (taught) via poster sessions or table-top displays. Tri-Fold poster boards are available at Office Max/Office Depot. Students often use them for Science Fair Projects. This is a new program area for CSVHFS. We need your creativity and effort to bring more content to the event. Think about a poster session or table-top display you could create for this year. Perhaps a big operating event. Or perhaps photos of a recent construction project. You are not limited to the poster boards, you may bring actual physical items for display on the table as well. The tables will be chaperoned for security. If you are a good teacher, consider covering some basic VHF/UHF topics. That way, your presentation can be used again in subsequent years. See the guidelines for Authors and Presenters for guidelines for Poster Sessions/Table-top displays.

Vendor Area

All day Friday and Saturday, an entire room will be available for vendors. Between talks you can peruse their wares. For dealers, we offer tables free for your use. The Vendor Area will have free WIFI available. Special requirements, telephone line and special electrical requirements, will need to be worked out with the Hotel. If you attend as a dealer, you're guaranteed to have shoppers interested in test equipment, and VHF/UHF/microwave equipment and parts. For non-commercial attendees bringing used equipment to move, we'd prefer if you'd bring your material to the Flea Market (see below). If you must have a dealer table, however, your space will be limited, so make your reservations early!

Dealers who have pledged their attendance include (watch this page—additions will be made as dealers are identified):

* Down East Microwave
* FlexRadio Systems
* Yaesu

Additional dealers are welcome. For information, table waivers, electricity requirements or simply to be added to the list, please email

Kermit Carlson, W9XA

Flea Market

Friday night from 1900-2200, find some new treasures at the Flea Market filled with VHF/UHF/Microwave goodies. Expect much better than you'd see at your regular hamfest. Bring things to sell--you know the interest areas of our members!

Banquet

More information coming soon.

The Banquet Goodies Table

The Central States VHF Society Banquet Goodies Table is famous for it's quantity and quality. Many generous donors make valuable gifts available for all banquet attendees. Everyone goes home with something and several are of incredible value! Please bring donations for the ham and ladies' prize tables. Please bring prizes and be generous with your fellow attendees.

Hospitality Room

The Hospitality Suites are hosted by local or regional clubs. This is a great place to

enjoy a beverage and some snacks with LOTS of conversation. We are again offering a Ladies Hospitality Suite as well.
Parting Shots session
Sunday Morning gathering in the hotel.
Contact Bill Caldwell, N0LNO with questions.

3272. Where's Jimmy?

Yahoo group: IndyHamRadio
Date: 2013-07-28 20:55:58 UTC
From: Brian
Topic: 3272 Message: 3272

Well, I never got an approval for the "Where's Jimmy" special event I wanted to run this weekend. Apparently I did not give them enough time, so I think I will try to do it again next year, afterall the liklihood of James Riddle Hoffa (native born hoosier from Brazil Indiana) showing up by this time next year is pretty close to nil. Especially since he'd be 101 years old by this time next year.

So in honor of the anniversary of his "disappearance" I fired up the Roku and Netflix as I watched "Hoffa" starring Jack Nicholson and Danny DiVito. I was kind of surprised to see that DiVito actually directed the film from 1992. He did a good job.

This has almost nothing to do with Amateur Radio, other than another opportunity for a Special Event has come and gone. Oh well, maybe next time?

3274. Exam Session

Yahoo group: IndyHamRadio
Date: 2013-07-31 15:37:32 UTC
From: Brian Murrey
Topic: 3274 Message: 3274

The WD9BSA VE Team will be hosting their first test session with the Laurel VEC on August 24th at the Golden Burke Scout Office.

Golden-Burke Scout Center
7125 Fall Creek Road North
Indianapolis, IN 46256

You must pre-register, walk in candidates can not be accepted at this time due to limited seating.

Registration is at 9AM, testing begins at 10AM.

There is no charge for this exam session.

For full details visit http://wd9bsa.org and click on the Licensing Tab

To register send your info to: wd9bsa@...

Include what exam you want to take, your name, address, phone, and existing callsign. Your registration will be processed and you will get an email letting you know if we have room for you or not. If you are a scouter, include your Troop, Pack or Crew number and your District name.

We hope to have a larger room for the next one, so we can accept walk in candidates.

3276. Volunteer Examiners Needed

Yahoo group: IndyHamRadio
Date: 2013-08-25 22:06:18 UTC
From: Brian
Topic: 3276 Message: 3276

This Saturday the WD9BSA VE Team conducted their very first test session. It was held at 9AM at the office of the Crossroads of America Council at 7125 Fall Creek Road North on the east side. We have a 100% passing rate! More info about the WD9BSA group is on our website at http://wd9bsa.org

We plan to hold four test sessions per year to accommodate Boy Scouts and Scouters (Adult Boy Scouts) that have been working on their Radio Merit Badges and have decided to take the next step to licensing or upgrading.

The WD9BSA Group operates from Camp Belzer, near Lawrence. We currently have two working HF stations, and UHF/VHF stations for scouts and scouters to come in and try out a couple of times a month, and on certain special occasions. The WD9BSA Group is headed up by Randy Biggs KA9BSA, Tom O'Nan N9CXI, and Dave Johnson N9EZW and has the cooperation of the Crossroads of America Boy Scout Council.

We currently have 10 local Amateurs registered as VE's and we would like to boost that pool number to 15-18 so we have some "spares" to fall back on. If you are an Extra or General class operator and would like to join the WD9BSA group, please let me know and I will get you a VE application to fill out. Preference will be given to Extra class operators interested in being part of the VE team.

We also provide training for local troops that are interested in earning their Radio Merit Badge, and we could use a few more hams that would be able to assist in this training about one day a quarter, usually a Saturday at Camp Belzer. If you are interested in being a Radio Merit Badge Counselor, also let me know. You will be required to fill out an adult volunteer application with the Boy Scouts of America, agree to a criminal background test, and complete an online training course called "Youth Protection Training" that takes about 30 minutes.

Every adult volunteer position in Scouting takes about an hour a week (hahah), except this only takes a couple hours a quarter.

Thank you,

73 de KB9BVN

3277. September VHF Conference, 1800 UTC Saturday, 9/14 and ends 0259 UTC Monday, 9/14

Yahoo group: IndyHamRadio
Date: 2013-09-14 17:31:39 UTC
From: Mark Thompson
Topic: 3277 Message: 3277

Note: Single Operator FM Only Category Now Available

http://www.arrl.org/september-vhf
Full Contest Details

1. Object: To work as many amateur stations in as many
different 2 degrees X 1 degree grid squares as possible using authorized
frequencies above 50 MHz. Foreign stations work W/VE amateurs only.
2. Date and Contest Period: The second full weekend of
September. Begins 1800 UTC Saturday and ends 0259 UTC Monday (September
14-16, 2013).
3. Entry Categories:
3.1.Single Operator: One person performs all
transmitting, receiving, spotting, and logging functions as well as equipment
and antenna adjustments. Only one transmitted signal is permitted at any given
time. Use of spotting assistance or nets (operating arrangements involving other
individuals, DX-alerting nets, internet chat rooms, packet, etc) is not
permitted.
3.1.1.Single Operator Low Power:
3.1.1.1. Power limits on any band may not exceed the
following:
3.1.1.1.1. 50 MHz and 144 MHz--200 W PEP.
3.1.1.1.2. 222 MHz and 432 MHz--100 W PEP.
3.1.1.1.3. 902 MHz and above--50 W PEP.
3.1.2. Single Operator High Power: Power limits on any band
exceeds the limits for the Single Operator Low power.
3.1.3. Both Single Operator High and Low Power stations
compete for all-band and single-band awards.
3.1.4. Overall and single-band winners are recognized both
in QST score listings and in awards offered.
3.2.Single Operator Portable:
3.2.1. Ten (10) W PEP output or less.
3.2.2. Portable power source.
3.2.3. Portable equipment and antennas.
3.2.4. Single Operator Portable stations must operate from a
location other than a permanent station location.
3.2.5. Single Operator Portable stations may not change
locations during the contest period outside of the original 500-meter diameter
permitted circle.
3.3. Single Operator, 3-Band:
3.3.1. Restricted to 50, 144 and 432 MHz.
3.3.2. Power limits are 100 W PEP on 50 and 144 MHz, 50 W
PEP on 432 MHz.
3.4. Single Operator, FM Only

3.4.1. All QSOs must be made using Frequency Modulation (FM).
3.4.2. Restricted to 50, 144, 222 and 440 MHz.
3.4.3 Power limits are 100 W on all bands.
3.5. Rover: A rover is comprised of no more than two
operators that moves among two or more grid squares during the course of a
contest. An operator may perform any or all rover functions, but a driver's
function shall be limited to driving the vehicle. Drivers may be switched out
during the event. Any number of observers is also allowed, however observers may
not perform any rover function at any time. Rover vehicles with only one
occupant are allowed to perform all functions listed above.
3.5.1. A rover vehicle may transport only one station using
a single call sign. An exception is provided for in "General Rules for All ARRL
Contests" number 3.5 (Family Rule).
3.5.2. A rover may not operate with more than one call
sign.
3.5.3. Rover vehicles must transport all the equipment,
power supplies, and antennas used at each operating site.
3.5.4. Rovers MUST sign "rover" on Phone and /R on CW and
digital modes after their call sign.
3.5.5. All Rovers are encouraged to adopt operating
practices that allow as many stations as possible to contact them.
3.5.6. Rover operators may submit separate logs for single
operator (fixed station) in addition to their rover entries. Rovers submitting a
score for inclusion in a club competition must also include a secondary summary
sheet indicating the portion of the score that counts for the club score if any
of the QSOs submitted take place outside of their club's territory.
3.5.7. Rovers are permitted to use APRS. Rovers using APRS
transmit only their call sign and position. Any multi-op station may access
rover APRS data directly or via the Internet.
3.5.8. A rover may not make more than 100 QSOs with any
other one rover.
3.6. Limited Rover. Same as the "Rover" class
above, but competes using only the lowest four bands available for any given
contest (6M - 432 MHz for VHF+ contests, 222MHz - 1.2 GHz for August UHF).
Output power limits shall be the same as those defined for the Single Operator
Low Power category (2.1.1)
3.7. Unlimited Rover.Same as "Rover"
class above, but Unlimited Rovers may use no more than two operators and are
exempt from rules 3.5.3 and 3.5.8.
3.7.1. Unlimited Rover scores may NOT be applied to a club
score for Club Competition.
3.8. Multioperator (includes Single
Operator stations that use spotting assistance):
3.8.1.Multioperator (Unlimited): Stations
submit logs with more than four bands used.
3.8.2. Limited Multioperator: Stations submit logs with a maximum of four bands used. (Logs
from additional
bands used, if any, should be included as checklogs.)
4. Exchange: Grid-square locator.
4.1. Exchange of grid square is required. Exchange of signal

report is optional.
5. Scoring:
5.1. QSO points:
5.1.1. Count one point for each complete 50- or 144-MHz
QSO.
5.1.2. Count two points for each 222- or 432-MHz QSO.
5.1.3. Count three points for each 902- or 1296-MHz QSO.
5.1.4. Count four points for each 2.3-GHz (or higher)
QSO.
5.2. Multiplier: The total number of
different grid squares worked per band. Each 2 degrees X 1 degree grid square
counts as one multiplier on each band it is worked.
5.3. Final score: Multiply the total number
of QSO points from all bands operated by the total number of multipliers for
final score.
5.4. Rovers only: The final score consists of the total
number of QSO points from all bands times the sum of unique multipliers (grid
squares) worked per band (regardless of which grid square they were made in)
plus one additional multiplier for every grid square activated (made a contact
from).
5.4.1. Rovers are listed in the contest score listings under
the Division from which the most QSOs were made.
5.4.2. Rovers who submit scores for the club competition
must submit a separate summary sheet and log indicating QSOs and scoreif
they make any contacts from outside of the club territory. The summary
sheet should be clearly marked “for club competition only” and must be emailed
separately to contests@arrl.org
6. Miscellaneous:
6.1. Stations may be worked for credit only once per band
from any given grid square, regardless of mode. This does not prohibit working a
station from more than one grid square with the same call sign (such as a
Rover).
6.2. Only one signal per band (6, 2, 1 1/4, etc) at any
given time is permitted, regardless of mode.
6.3. Multioperator stations may not include QSOs with their
own operators except on frequencies higher than 2.3 GHz. Even then, a complete,
different station (transmitter, receiver and antenna) must exist for each QSO
made under these conditions.
7. Awards:
7.1. Certificates will be awarded in the following
categories.
7.1.1. Top Single Operator High and Single Operator Low
power in each ARRL/RAC Section.
7.1.2. Top Single Operator High and Single Operator Low
power on each band (50, 144, 222, 432, 902, 1296 and 2304-and-up categories) in
each ARRL/RAC Section where significant effort or competition is evident. (Note:
Since the highest score per band will be the award winner for that band, an
entrant may win a certificate with additional single-band endorsements.) For
example, if KA1RWY has the highest single-operator low-power all-band score in
the CT Section and her 50- and 222-MHz scores are higher than any other CT

single operator’s, she will earn a certificate for being the single-operator Section leader and endorsements for 50 and 222 MHz.
7.1.3. Top Single Operator Portable in each ARRL/RAC Section where significant effort or competition is evident. (Single Operator Portable entries are not eligible for single-band awards.)
7.1.4. Top rover in each ARRL Division and Canada where significant effort or competition is evident. (Rover entries are not eligible for single-band awards.)
7.1.5. Top multi-operator score in each ARRL/RAC Section where significant effort or competition is evident. (Multioperator entries are not eligible for single-band awards.)
Top limited multi-operator in each ARRL/RAC Section where significant effort or competition is evident. (Limited multi-operator entries are not eligible for single-band awards.)
7.1.6. Top scoring club in each club competition category will be awarded a gavel.
See “General Rules for all ARRL Contests” for club competition information.
8. Submission:
8.1. All submissions must be emailed to SeptemberVHF@... postmarked no later than 0300z Wednesday, October 16, 2013. Paper logs should be mailed to Sept VHF QSO Party, ARRL Contest Branch, 225 Main St, Newington, CT 06111. Logs mailed or emailed after the submission deadline may be designated as check logs.
8.2. Stations that use computers to log must send the electronic log in the Cabrillo file format for entry into the results. Submitted electronic files must be in ASCII / text readable format. A paper printout of an electronically created log is not an acceptable substitute for the required log file.
8.3. Electronically submitted entries are considered signed.
8.4. Logs may be submitted via the special web applet.
8.5. All paper entries must include a fully completed summary sheet and a complete log of the contacts made.
9. Other:
9.1. See “General Rules for All ARRL Contests” and “General Rules for ARRL Contests on bands above 50 MHz (VHF)."
9.1.1 Questions? Contact contests@...or (860) 594-0232begin_of_the_skype_highlighting (860) 594-0232 FREE end_of_the_skype_highlighting

3278. Ham Radio Publications Pioneer, Visionary, Iconoclast Wayne Green, W2NSD, SK

http://www.arrl.org/news/ham-radio-publications-pioneer-visionary-iconoclast-wayne-green-w2nsd-sk

Ham Radio Publications Pioneer, Visionary, Iconoclast Wayne Green, W2NSD, SK

09/15/2013
Wayne S. Green II, W2NSD ("Never Say Die"), of Hancock, New Hampshire, died September 13. He was 91. A well-known and often outspoken figure during what some consider Amateur Radio's golden years in the 1950s and 1960s, Green helmed CQ Magazine for 5 years before becoming the self-proclaimed "El Supremo and Founder" in 1960 of 73 magazine, which he published until 2003.
"The purpose of [73] at that time was to get more hams building equipment," Green recounted in a radio interview several years ago. A hallmark of 73 was Green's iconic, rambling, and wide-ranging "Never Say Die" editorials, in which he rarely missed an opportunity to tweak the ARRL and his magazine competitors for their perceived shortcomings. In 2012 Green contributed back issues of 73 to Internet Archive.
"Wayne will be remembered in many different ways by many different people, but he will be long remembered," said ARRL CEO David Sumner, K1ZZ. "He maintained his membership in the ARRL despite being a persistent critic. In the early days of packet radio he gave me some good advice as to how the ARRL should promote the new technology: 'Talk about it as if everybody's doing it, and eventually they will be.'"
Indeed, Green often was ahead of the curve in promoting such technologies as single-sideband phone, solid-state, FM, and the marriage of computers and ham radio, and he went on to found and publish Byte and other computer-oriented publications. "I live mostly in the future," Green was quoted as saying.
Former ARRL Contributing Editor Stan Horzepa, WA1LOU, once wrote in his "Surfin'" web column, "We take computers and the Internet for granted today. I first became interested in computers when Wayne Green, W2NSD, started writing about them in 73 magazine in the 1970s. Back then, you had to build your own from scratch or from kits."
Green maintained a larger-than-life presence, even in the years after he faded from the Amateur Radio spotlight, and he never did really retire. "Hey old buddy, I will miss you," radio talk show host Art Bell, W6OBB, posted to Wayne Green's blog.
"NEVER SAY DIE is a phrase that will be with me till it's my time." Green was an occasional guest on Bell's "Coast to Coast AM" overnight talk program. There hardly was an issue that Green would not confront, and he expounded a variety of unconventional science, health, and medical theories — from cold fusion and the moon landing to AIDS and cancer cures. He continued to write and speak frequently on these topics and others, as well as on public policy, even at

hamfests where he was a guest.
The “Final” in his blog sums up Green’s overarching philosophy. “Wayne Green passed away September 13, 2013 in a peaceful, painless transition from this life on Earth. An eternal optimist, and one who loved to share his never-ending zest for life, he was a friend to many and will be missed greatly. Wayne was not afraid of dying and was very much ready to embark on his next great adventure to the afterlife.”

FOR IMMEDIATE PUBLIC RELEASE

Yaesu's complete System Fusion C4FM / FDMA Amateur Radio Digital Communication System was introducing to North America ham radio operators yesterday late afternoon at the 32nd Annual ARRLand TAPR Digital Communications Conference in Seattle, Washington.
Yaesu's FT 1DR Handheld and FTM 400DR mobile digital and analog dual band transceivers, already available, were discussed as well as a new key system components, the new DR-1 Dual Mode Repeater.

This conference is an international forum for radio amateurs to meet, publish their work, and present new ideas and techniques.
Presenters and attendees have the opportunity to exchange ideas and learn about recent hardware and software advances, theories, experimental results, and practical applications.
Attendees frequently are Amateur Radio individuals experimenting at the very leading edge of the kinds of new technology that keeps Amateur Radio constantly moving forward.
It was our intent to show our respect to these individuals by launching the new Yaesu System Fusion C4FM / FDMA Amateur Radio digital communication system during their proceedings.

Yaesu encourage all interest parties to download the attached Yaesu Product Bulletin as well as our new System Fusion Product Brochure to acquaint themselves with its full capabilities.
We are certain that many will applaud the fact that System Fusion is "FM Friendly" meaning both Analog and C4FM Digital users can share one repeater and communicate with each other.
With this one hugely important feature, Yaesu has shown their deep appreciation for their customers who for years and years have purchased their VHF and UHF Conventional FM Analog products.
Yaesu's System Fusion provides an opportunity for a smooth transition to Digital for hams choosing to make that change without having to lose contact with their friends who may not be making the change at the same.

Yaesu will release additional purchasing and availability information to their North American Dealers in the next few weeks.
We fully expect there to be a large number of System Fusion repeaters on-the air-widely serving the Amateur Radio community by year's end!

Please join us as we celebrate this very important day in Amateur Radio history!

Thank you.

Best regards,
Dennis Motschenbacher K7BV
Executive Vice President Amateur Radio Sales

Date: 2013-10-24 15:23:42 UTC
From: <neilrapp@...>
Topic: 470 Message: 3287

Don't forget to support your local school/university ham radio club this week during school club roundup. It's until Friday at 2359Z. Make a contact once on phone, and once on digital (including CW). Repeat contacts on multiple bands do NOT award more points. See the ARRL web site for suggested frequencies.

Bloomington High School South ARC will be on from 3 to 8 pm Eastern both today and tomorrow. We are usually near 14.260 or 7.250, and occasionally on 14.070 PSK 31.

3289. IDHS Digital Amateur Radio Advisory Council

Yahoo group: IndyHamRadio
Date: 2013-10-29 21:23:19 UTC
From: West, Don
Topic: 3289 Message: 3289
Attachments: 1 described; binary payloads are missing from this source WARC

To: All Indiana Amateur Radio Operators
From: Don West, IDHS Communications Director

One of the missions assigned to my position is the development of redundant and reliable means of communications to support emergency response efforts in the event of disruption of usual means of communication; such as cellular, Internet, etc. Amateur radio capabilities, both voice and data, are important resources to local, state and national government emergency management agencies with respect to disaster communications.

It is not the role of the Indiana Department of Homeland Security to direct the development of Amateur Radio in Indiana, but given Amateur Radios long standing tradition of emergency preparedness, it is within IDHS's role to partner with the Amateur Radio Community where there are mutual interests.

To this end, IDHS has provided considerable grant funding to state and county emergency management agencies to provide equipment necessary to facilitate this partnership. While there has been a considerable amount of success in developing both voice and data capabilities, the nature of data requires somewhat more coordination than voice. An effective system of data communications requires a network of sorts.

To this end, I have asked Joseph Lawrence, K9RFZ to organize an IDHS Digital Radio Advisory Council. The Council's responsibilities would include:
1. Advise IDHS Communications on issues of all forms of digital Amateur Radio communications.
2. Recommend standards, guidelines, and best practices for the operation of digital Amateur Radio communications relative to emergency management.
3. Strive to develop consensus within the Amateur Radio community on how to foster digital interoperability.
4. Assist with routine testing of digital Amateur Radio communications systems and pathways in Indiana and surrounding states.
5. Provide guidance and expertise to local Emergency Management Agencies with the efficient operation of EMA Amateur Radio equipment.

The Council should consist of:

1. A Facilitator to enlist committee members, coordinate committee meetings and discussions, document committee actions, and report progress to the IDHS Communications Director.
2. Subject Matter Experts from each of the 10 IDHS districts with experience in the operation and maintenance of digital stations
3. Volunteers affiliated with county or district level amateur radio emergency communications organizations with access to the EMA EOC digital stations.

Joseph Lawrence will be at the Fort Wayne Hamfest November 16 & 17. There will be demonstrations of Packet, FLDIGI and APRS (perhaps RMS Express). Jerry Kutche, N9LYA, State Packet Coordinator plans to be there one day.

If you are interested in participating in the Advisory Council, please contact Joseph at k9rfz@...<mailto:k9rfz@yahoo.com>.

Brian,

Thank you for this notice. Was a sad message to read, as I have known Jim since the 80's when I left the service and moved back home to the Terre Haute area. He and I were some of the first ones on packet in that area and always had interesting conversations. He wa one of the ones that convinced to run for President of the local Club, only having to move a few months after doing so.

Jim was a great Amateur, always willing to help others. That is why I chose him for the Technical Specialist Coordinator's job when I became the Section Manager.

He will be missed by all that he has touched over the years.

Subject: W5KUB Live Broadcast

It's time for the W5KUB.COM (http://W5KUB.COM) live broadcast of R & L Electronics' Customer Appreciation Day!!

Please join W5KUB.com for our live, online broadcast of the R & L Electronics' Customer Appreciation Day on Saturday, Dec 14 from Hamilton, OH (41 miles south of Dayton). There will be great in-store prizes and online prizes to be awarded. To join the broadcast go to http://W5KUB.com (http://w5kub.com/) where the fun begins! W5KUB will interview various vendors regarding their latest products, and broadcast the presentations from Heil Sound by Bob Heil (K9EID), System Fusion by Yaesu, and D-STAR by Icom.

During the live broadcast, online viewers will have the opportunity to meet and chat with other ham radio operators from around the world or chat directly with us at the event and ask questions. You may also see many of your friends on the broadcast.

You could win one of a number of online prizes awarded during the broadcast if your name is called from the registered users in the chatroom. As always, you must claim your prize within the specified time frame. In the past year over $10,000 in prizes have been awarded! Of course, no purchase is necessary to win a prize. W5KUB is not affiliated with any products or companies and does not sell any products or services.

Broadcast schedule (all times are subject to change):

· Friday, Dec 13: 1500 UTC (9:00 AM CT) drive from Collierville, TN to Hamilton, OH (10 hours). Yes, this will be a live broadcast of our drive!

· Saturday, Dec 14: 1500 UTC - 2330 UTC (9:00 AM - 5:30 PM ET), show from inside the R & L Electronics facilities

· Sunday, Dec 15: 1500 UTC - 2300 UTC (9:00 AM – 5:00 PM ET), Drive from Hamilton, OH to Collierville, TN. Broadcast live.

Join our group on Facebook at https://www.facebook.com/groups/w5kub/ to keep up with us year-round. Also, please help spread the word by posting this announcement in Facebook and

forwarding this message to your ham radio friends that may not have received this message! We';ll 'see' you at R & L Electronics!

73,

Tom Medlin, W5KUB

3300. CQ to Realign Publications, Launch Digital Supplement

Yahoo group: IndyHamRadio
Date: 2013-12-30 17:24:00 UTC
From: Mark Thompson
Topic: 3300 Message: 3300

http://www.arrl.org/news/cq-to-realign-publications-launch-digital-supplement

CQ to Realign Publications, Launch Digital Supplement

12/24/2013
CQ Communications Inc has announced plans to realign its publications lineup and to launch a new online supplement to its flagship magazine, CQ Amateur Radio.
“The hobby radio market is changing,” said CQ Communications President and Publisher Dick Ross, K2MGA, “and we are changing what we do and how we do it in order to continue providing leadership to all segments of the radio hobby.”
Effective with the February 2014 issue of CQ, said Ross, content from the magazine’s three sister publications — Popular Communications, CQ VHF andWorldRadio Online — will be incorporated into CQ’s digital edition as a supplement to be called CQ Plus. The print editions of Popular Communicationsand CQ VHF will be phased out, and WorldRadio Online will no longer exist as a separate online publication. Current Popular Communications, CQ VHF andWorldRadio Online subscribers will be converted to CQ subscribers and receiveCQ Plus at no additional charge. Details will be posted on each magazine’s website.
CQ Communications says the change will offer hobby radio enthusiasts a single source for articles from shortwave listening and scanner monitoring to personal two-way services and Internet radio, as well as Amateur Radio. Richard Fisher, KI6SN, currently editor of both Popular Communications and WorldRadio Online, will be editor of CQ Plus.
“Our primary audience is ham radio operators, but very few hams began their radio involvement as amateurs,” Ross said. “Most of us started out as shortwave listeners, broadcast band DXers, CBers or scanning enthusiasts. Many continue to be involved in many different aspects of the radio hobby in addition to Amateur Radio.” Ross said consolidating four specialized publications into one will keep “multidimensional readers” informed on all aspects of the radio hobby, at the same time exposing non-hams “to all the excitement and opportunities that Amateur Radio has to offer.”
The expanded material will be an integral part of the digital edition of CQ and will be included as part of a standard digital subscription. Each month’s digital edition will continue beyond where the print edition ends, offering supplemental material on all aspects of hobby radio communication and selected columns carried over from the other magazines. The added digital content will make full use of the multimedia opportunities presented by digital publications.
A preview of the February issue’s table of contents is available on the CQwebsite.

3301. Memorial Service for Jim Osburn

Yahoo group: IndyHamRadio
Date: 2013-12-31 16:25:45 UTC
From: Brian Murry
Topic: 3301 Message: 3301

Dear Friends of Jim Osburn,

The following was sent by Jim Edwards, KA9DIF.
Best wishes, and hope to see you there. (At both events.)

Jim Osburn’s memorial service will be held on Saturday, January 4th at noon.
The family has asked that I pass along a message to anyone interested.

“Please come celebrate and remember Jim Osburn on Sat. Jan 4th. at 12 noon.
The service will be at the Chapel on the campus of Rose Hulman in Terre
Haute followed by food at the Ryves Youth Center. All family, friends and
ham radio operators are welcome.”

If you could help spread the word I know that they would appreciate it.
Hope to see you Saturday.

Jim Edwards KA9DIF

3303. Indy Hamfest & ARRL Foundation Scholarships

Yahoo group: IndyHamRadio
Date: 2014-01-10 15:52:53 UTC
From: <w9fg@...>
Topic: 3303 Message: 3303

ARRL FOUNDATION SCHOLARSHIPS – The Indianapolis Amateur Radio Assoc., operator of the Indy Hamfest, sponsors a $1000 scholarship. Amateurs living in Indiana will have preference. Applications for the 2014 scholarship process must be received at the ARRL Foundation by 11:59 PM Eastern Standard Time on January 31, 2014. Transcripts must be received by February 14, 2014. Scholarship recipients are typically notified in mid-May by USPS mail and email. More information can be found here: http://www.arrl.org/scholarship-descriptions Please pass the word if you know of someone who may be interested.

3304. ARRL January VHF Conference, 1900 UTC Saturday, 1/18 - 0359 UTC Monday, 1/20

Yahoo group: IndyHamRadio
Date: 2014-01-15 15:41:48 UTC
From: Mark Thompson
Topic: 3304 Message: 3304
Attachments: 1 described; binary payloads are missing from this source WARC

http://www.arrl.org/january-vhf

ARRL January VHF Contest Details
January VHF Rules [PDF]
1. Objective: To work as many amateur stations in as many different 2 degrees x 1 degree grid squares as possible using authorized frequencies above 50 MHz. Foreign stations work W/VE amateurs only.
2. Date and Contest Period: The date will be announced annually by the ARRL but will generally be the third or fourth weekend in January. Begins 1900 UTC Saturday, ends 0359 UTC Monday (January 18-20, 2014).
3. Entry Categories:
3.1. Single Operator (spotting assistance is NOT permitted)
3.1.1. High Power (1500 W PEP or maximum power allowed by your Amateur license, whichever is less)
3.1.2. Low Power (200 W PEP on 50/144 MHz; 100 W PEP on 222/432 MHz; 50 W PEP on 902 MHz and higher)
3.1.3. Portable (10 W PEP or less, portable power source, portable antennas,cannot set up at a permanent station location)
3.1.4. 3-Band (6m, 2m & 432 MHz only; 100 W or less on 6m/2m, 50 W or less on 432 MHz.)
3.1.5. FM Only (6m-446 MHz, 100 W or less on all bands)
Note: Single Operator stations that use spotting assistance will be placed in the Multioperator or Limited Multioperator category, based on bands and power used.
3.2. Rover
3.2.1. Rover (1 or 2 operators, all bands above 50 MHz, 1500 W PEP or maximum power allowed by your Amateur license, whichever is less)
3.2.2. Limited Rover (1 or 2 operators, 6m - 432 MHz only; 200 W PEP or less on6m/2m, 100 W PEP or less on 222/432 MHz.)
3.2.3. Unlimited Rover (all bands above 50 MHz, 1500 W PEP or maximumpower allowed by your Amateur license, whichever is less)
3.3. Multioperator (spotting assistance is permitted. Includes Single Operators entrants that use spotting assistance)
3.3.1. Multioperator (1500 W PEP or maximum power allowed by your Amateur license, whichever is less)
3.3.2. Limited Multioperator (Limited to any 4 bands above 50 Mhz, 1500 W PEP or maximum power allowed by your Amateur license, whichever is less)
4. Exchange:
4.1. Maidenhead grid-square locator (see www.arrl.org/grid-squares)
4.2. Exchange of signal report is optional.
5. Scoring
5.1. QSO points:
5.1.1. Count one point for each complete 50- or 144-MHz QSO.
5.1.2. Count two points for each 222- or 432-MHz QSO.
5.1.3. Count four points for each 902- or 1296-MHz QSO.

5.1.4. Count eight points for each 2.3 GHz (or higher) QSO.
5.2. Multiplier: The total number of different grid squares worked per band. Each grid square counts as one multiplier on each band it is worked.
5.3. Final score: Multiply the total number of QSO points from all bands operated by the total number of multipliers for final score.
5.4. Rovers only: The final score consists of the total number of QSO points from all bands times the sum of unique multipliers (grid squares) worked per band (regardless of which grid square they were made in) plus one additional multiplier for every grid square from which they successfully completed a contact.
5.4.1. Rovers are listed in the contest score listings under the Division from whichthe most QSOs were made.
6. Reporting:
6.1. Email electronic Cabrillo-formatted logs to JanuaryVHF@...; hand-written paper logs or diskettes should be mailed to ARRL January VHF Contest, 225 Main St, Newington, CT 06111.
6.2. Entries that have been electronically generated must submit their log file in the Cabrillo file format. Paper printouts of electronic files are not acceptable substitutes. Logs created with word processing or spreadsheet software are considered electronic logs and must be submitted in Cabrillo format.
6.3. Entries must be emailed or postmarked no later than 0359 UTC Wednesday, February 19, 2014.
6.4. Entries may be submitted using the web applet.

6.5. Rovers who submit scores for the club competition must submit a second summary sheet indicating QSOs and score if they make any contacts from outside of the club territory. Indicate clearly on the summary sheet and in log if the log is the total entry or that portion to be counted for the club score.
7. Miscellaneous:
7.1. Stations may be worked for credit only once per band from any given grid square, regardless of mode. This does not prohibit working a Rover station from more than one grid square with the same call sign.
7.2. All stations may have only one signal per band (6, 2, 220MHz, etc) at any given time regardless of mode.
7.3. Multioperator stations may not include QSOs with their own operators except on frequencies higher than 2.3 GHz. Even then, a complete, different station (transmitter, receiver and antenna) must exist for each QSO made under these conditions.
8. Awards: Certificates will be awarded in the following categories:
8.1. Single Operator
8.1.1. Top Single Operator entrant in each ARRL/RAC Section for High and Low Power.
8.1.2. Top single operator on each band (50, 144, 222, 432, 902, 1296 and 2304-and-up categories) in each ARRL/RAC Section where significant effort orcompetition is evident. (Note: Since the highest score per band will be the award winner for that band, an entrant may win a certificate with additional single-bandendorsements.) For example, if KA1RWY has the highest single-operator all-band score in the CT Section and her 50- and 222-MHz scores are higher than any other CT single operator’s, she will earn a certificate for being the single-operator Section leader and endorsements for 50 and 222 MHz.
8.2. Top Single Operator, Portable entrant in each ARRL/RAC Section where significant effort or competition is evident. (Single operator portable entries are not eligible for single-band awards.)
8.3.Top Single Operator, 3-Band entrant in each ARRL/RAC Section where significant effort

or competition is evident.(Single Operator, 3-Band entries are not eligible for single-band awards.)
8.4. Top Single Operator, FM Only entrant in each ARRL/RAC Section where significant effort or competition is evident. (Single Operator, FM Only entries are not eligible for single-band awards.)
8.5. Top Rover, Limited Rover and Unlimited Rover entrant in each ARRL Division and Canada where significant effort or competition is evident. (Rover entries are not eligible for single-band awards.)
8.6. Top Multioperator score in each ARRL/RAC Section where significant effort orcompetition is evident. (Multioperator entries are not eligible for single-band awards.)
8.7. Top Limited Multioperator in each ARRL/RAC Section where significant effort or competition is evident. (Limited Multioperator entries are not eligible for single-band awards.)
8.8. Top DX stations where significant effort or competition is evident.
9. Other:
9.1. See “General Rules for All ARRL Contests” and “General Rules for ARRL Contests on bands above 50 MHz (VHF)”
9.2. For more information contact contests@... or (860) 594-0232.

3305. WD9BSA - Testing Session

Yahoo group: IndyHamRadio
Date: 2014-01-21 20:57:28 UTC
From: Brian Murry
Topic: 3305 Message: 3305

The WD9BSA Amateur Radio Group will be offering license testing with the Laurel ARC on February 8th, 2014 at the Crossroads of America Council Scout Office. No walk ins, you need to register by going to the http://wd9bsa.orgwebsite and filling out the form. There is NO CHARGE for this test
session. All the rules and info can be found under the licensing tab on the website. If you are a scout or scouter, please bring your BSA membership card so we can log your visit.

Paperwork starts at 9AM, testing begins at 10AM.

AES Superfest 2014

Just wanted to send out a quick email
letting everyone know that we'll be having our annual Superfest again this
year.

Saturday - April 5, 2014
9am to
3pm
Milwaukee Store
We'll be sending out an email with more
details sometime in late February. In the mean time, you can check out the
Superfest page on our website.

3308. WD9BSA Test Session

Yahoo group: IndyHamRadio
Date: 2014-01-25 07:40:45 UTC
From: Brian
Topic: 3308 Message: 3308

The next WD9BSA VE test Session, in cooperation with the Laurel VEC, will be held on February 8th. We have a few seats open at this time, if you are interested in testing, please go to the website and register for a seat.

http://wd9bsa.org

Registration is under the Licensing Tab on the website, as are full details of the start time and location. Please follow the instructions listed there.

The Laurel VEC does not charge to sit for the exam. So here is your chance to take a test for free.

3315. FOR SALE: Icom IC-2300 2m FM Mobile NEW In Box

Yahoo group: IndyHamRadio
Date: 2014-03-08 00:10:14 UTC
From: Mark Thompson
Topic: 3315 Message: 3315
Attachments: 2 described; binary payloads are missing from this source WARC

I have decided to sell an Icom IC-2300H 2m FM Mobile I have never used.

Before I advertise it more widely on eHam.net, QTH.com or QRZ.com
I thought I would offer it locally first.

It is NEW In the Box and has never been used or taken out of the box.
I got the IC-2300H in August 2013 and the warranty card has NOT been mailed into Icom.

I've attached the Icom brochure & QST Review and
they can also be viewed at the links below.

Icom IC-2300H Brochure
http://www.icomamerica.com/en/downloads/DownloadDetails.aspx?Document=565

QST Review of IC-2300H
http://www.icomamerica.com/en/products/amateur/mobile/2300H/2300H_QSTProductReview.pdf

I am offering to sell the IC-2300H for $150

If I have to ship a radio I will not charge a shipping fee,
but will require payment by PayPal in advance.

If you're interested in it please contact me directly.

Thanks.

Subject: [QCWA Hotlist] 2014-012 - QCWA QSO Party - 1800Z, March 22, 2014

March 19, 2014

From QCWA Headquarters

http://www.qcwa.org

QCWA Bulletin 2014-012 - QCWA QSO Party - 1800Z, March 22, 2014

The QCWA QSO Party begins this weekend at 1800Z, March 22nd, 2014 and ends at 1800Z, March 23rd.

The QCWA Memorial station W2MM will be on the air from both Florida and Texas.
W2MM provides 100 additional bonus points for each time you work it.

Modes: Mode classifications are CW/Digital, Phone and Mixed.
Digital modes are included within the CW category.

Stations employing the QsoNet (CQ100) service are a separate category and
are required to submit separate logs for QsoNet (CQ100) operations.
QsoNet (CQ100) operations cannot be combined with on-the-air operations for scoring.
All entries are single transmitter in one power category only, even if more than one operator.

For a full list of all the rules, logging forms and summary sheet, visit;
http://www.qcwa.org/qso-party.htm
Thanks to John Bednar, K3CT, for once again revising N1MM Logger software to incorporate the new rules for the 2014 QSO Party.

The full N1MM install can be found at <http://n1mm.hamdocs.com/tiki-index.php?page=Full+Install>http://n1mm.hamdocs.com/tiki-index.php?page=Full+Install
Once you have installed N1MM, don't forget to install the latest updates which incorporates the latest QSO Party changes.
These can be found at; http://n1mm.hamdocs.com/tiki-list_file_gallery.php?galleryId=15

3320. Hamfest in Columbus

Yahoo group: IndyHamRadio
Date: 2014-03-31 20:03:56 UTC
From: Brian Murry
Topic: 3320 Message: 3320

Here's my hamfest report...

The weather was very soggy and cold...but the turnout was pretty good considering the weather. I hadn't been to this one in about five years so I didn't know what to expect. Didn't buy anything, didn't see anything I had to have, but I did get to talk with several fellow hams that I hadn't seen in a long time so that was great.

I think five bucks is a good price for a hamfest. I understand that my name was drawn for a valuable doorprize about 15 minutes after I left...so I missed out on that...I wonder what it was...I hope it wasn't an Omni VII and a new Alpha DXCC. I didn't see any commercial vendors, but I did see a lot of electronics stuff and not so much crafts and garage sale junk...so that was a bonus.

Didn't try the food, although it looked like a lot of hams were enjoying the biscuits and gravy. Tip of the hat to CARC for hosting it again this year.

D-STAR Class Returns to Dayton Hamvention 2014

The ultimate D-STAR training class, D-STARInfoCon 2014, returns to Dayton Hamvention for the third year to provide an introduction to D-STAR for new users getting on the air and more advanced information for experienced D-STAR users.

The three-hour class will again be held at the Drury Inn at 6616 Miller Lane in the heart of hotel row near Hamvention. T

his year's topics will include using DR Mode, using a Raspberry Pi with your DVAP, updating Repeater Lists for DR Mode, using D-RATS for data and much more.

The new Icom ID-5100A will be demonstrated.

All registered class participants are eligible to win an ID-51A dual-band D-STAR handheld to be given away during the class.

The cost of the class is $15.00 and includes all course material. Pre-registration is required and seating is limited.
Registration and payment via PayPal can be found at www.dstarinfo.com.

For more info, send an email to info@dstarinfo.com.

3322. Spring VHF & Up Sprint Contests (2m Tonight, 4/7, 7 - 11 pm Local)

Spring VHF & Up Sprints
2014 Information
From Kent O'Dell, KA2KQM.
Greetings all! I am now supporting the Central States VHF and above Spring Sprints. I am doing this with assistance from Mike Metroka, WB8BZK. I would like to personally thank John Kalenowsky, K9JK for his many years of service supporting the Spring Sprints efforts for the Central States VHF society. Hats off to you John for such fine service!
*** Please note that the Central States VHF Society and the Southeastern VHF Society are partnering together to provide a consistent set of of rules that apply to both the Spring and the Fall Sprints. ***

Rules for 2014 VHF and up Spring Sprint Contests

Revision 3 by NT4RT and KA2KQM   Mar 18, 2014
1.0 Contest Purpose: Encourage weak signal VHF/UHF amateur radio operation & have fun.
2.0 Contest Date and Time:
1. 144 MHz: Monday, 4/7/14 from 7 - 11 PM local.

2. 222 MHz: Tuesday, 4/15/14 from 7 - 11 PM local.

3. 432 MHz: Wednesday, 4/23/14 from 7 - 11 PM local.

4. Microwave, 902 MHz and up: Saturday, 5/3/14 from 6 AM - 1 PM local.

5. 50 MHz: Saturday, 5/10/14 from 2300z until 0300z Sunday, 5/11/14

3.0 Classes: Stations will be classified as either Single Op or Rover. A portable or mobile station that operates from only one grid is considered a Single Op station. A Rover must operate from at least 2 grid squares.
3.1 Power: Power output used for contacts is for informational purposes only. Power output will not be used to separate contestants into different groups or categories. You may want to place your station information such as rig, output power, antenna etc. in the notes section of your entry. That being said, the following are the suggested power levels for the HP, LP and QRP groupings on the 3830 web site.
a. QRP: up to 5 watts PEP. (any band)
b. Low Power: up to 200 watts PEP. (any band)
c. High Power: up to 1500 watts PEP. (any band)

4.0 Exchange: Maidenhead Grid Square. Microwave contest exchange must be the full 6 character grid.
5.0 Reporting: Score will be entered on the 3830 web page in the form provided for the particular sprint.   The web page is http://www.3830scores.com/ .
Alternatively, you can postal mail a complete log to the contest chairman in place of a 3830 entry. A 3830 entry is preferred.
Your grid square goes in the web site box for "QTH". Microwave use 6 digit grid. Rovers

use the first grid activated as QTH.
Winning entries will supply a log for review by the sprint chairman to make score official. The Log can be a mailed paper log or emailed as an attached text file in an ARRL recognized format. ARRL log sheets are the preferred paper format.
Your Central States VHF Society Sponsored Spring Sprints Chairman is:
Kent O'Dell, KA2KQM
Email: kotoka2kqm@...
Or postal mail:
Kent O'Dell
KA2KQM
2752 Monument Road
Jasper, GA 30143
The results must be posted on the 3830 web page within 14 days of the event. Paper logs may be mailed to the Sprint Chairman for this event. Mailed logs must be post marked within 14 days of the event. The Sprint Chairman will post the results from a paper log on the 3830 web page.
5.1 Scoring: 50, 144, 222 and 432MHz , 1 point per QSO on any band. Multiplier would be the total number of grid squares worked for that specific band/Sprint.
Final score: Multiply QSO points by the multipliers. Each Sprint is scored separately. Distance based total kilometers worked would be an optional entry for information only. (Distances are not very accurate from 4 digit grids.)
5.2 Rover Scoring: 50, 144, 222 and 432MHz , 1 point per QSO on any band. Multiplier would be the total number of grid squares worked for that specific band/Sprint.
If the rover moves to a new grid, then works a station again, a new contact is made for both stations. The new grid will be a new multiplier if the grid was not worked before.
Rover in EM73 works EM84 as a multiplier
Rover in EM74 works EM84 as a new multiplier
When you move to a new grid, you start over on additional new multipliers.
Final score: Multiply QSO points by the multipliers. Each Sprint is scored separately. Distance based total kilometers worked would be an optional entry for information only.

5.3 Microwave Scoring: For Microwave, 902 MHz and above use the sum of the distance of all contacts in kilometers. A station worked on a new band is a new contact. If a rover moves to a new grid (4 digit) he/she can be worked again for another contact.
The 6 digit grid square exchange is required for accurate distance calculation.
5.4 Microwave Rover Scoring: Scored like Single Op Microwave, except stations can be contacted again for score after moving to a new grid. Grids activated are not used directly for scoring and are not reported on 3830 web site.
5.5 The contest scoring is intended to be done mostly on the "Honor System". But, after the submission period has expired, 14 days after that particular operating event, the Sprints Committee or Chairman for that particular event will review the top 3 submissions to validate accuracy of the submission. And, the Sprints Committee or Chairman reserves the right to request to review the actual contest log for any entrant for review if required.
6.0 Rover Operation: A rover must be a portable or mobile station that makes contacts from at least two different Grid Squares. For all sprints, including microwave the rover must move to a new 4 digit Grid Square.
7.0 Assistance: Use of telephone, packet or internet methods to schedule contacts during the contest is acceptable. The telephone, packet or internet channel will not be used while the contact is in progress. No "OK I am hearing you now" over the another communications channel. The alternate channel will not be available in any way to the operator during the contact. The complete exchange of call signs and grids must be

accomplished on the relevant amateur radio band. The preferred scheduling method is on an amateur frequency such as 144.250MHz or 432.090MHz.
See following for 3830 site information. Underline identifies a user entry box.
3830 information   50 to 432 MHz Spring/Fall Sprint
(band is 50MHz, 144MHz, 222MHz, or 432MHz) for 4 separate contest entries

3323. MFJ-1118 DC Power Strip For Sale

Yahoo group: IndyHamRadio
Date: 2014-04-09 15:12:12 UTC
From: Ray, K9DUR
Topic: 3323 Message: 3323

I have for sale an MFJ-1118 High Current Multiple-Outlet DC Power Strip. It was purchased for a specific project, but was never used. Box has been opened, but otherwise it is in new condition.

The current price from MFJ is $84.95. I am asking $50 (local pick-up/delivery) or $60 (shipped). If I do not sell it in a few days, I will offer it on E-Bay.

If interested, contact me at (812) 236-6522.

73, Ray, K9DUR

3324. Packet Radio Net

Yahoo group: IndyHamRadio
Date: 2014-04-14 15:10:17 UTC
From: West, Don
Topic: 3324 Message: 3324
Attachments: 1 described; binary payloads are missing from this source WARC

IDHS RACES Team,

The Marion County ARES Team is having a Packet Net using the W9SEM Chat room feature after their regular 7:30 voice net (146.700) on the first and third Wednesdays of the month.

If you have packet and are interested in participating:

* Connect to W9SEM-7 on 145.050

* Type CHAT and hit enter

* Specialized Chat Commands are:

o Commands can be in upper or lower case.
/U - Show Users.
/N - Enter your Name.
/Q - Enter your QTH.
/T - Show Topics.
/T Name - Join Topic or Create new Topic. Topic Names are not case sensitive
/P - Show Ports and Links.
/A - Toggle Alert on user join.
/C - Toggle Colour Mode on or off (only works on Console or BPQTerminal.
/E - Toggle Echo.
/Keepalive - Toggle sending Keepalive messages every 10 minutes.
/ShowNames - Toggle displaying name as well as call on each message.
/S CALL Text - Send Text to that station only.
/F - Force all links to be made.
/K - Show Known nodes.
/B - Leave Chat and return to node.
/QUIT - Leave Chat and disconnect from node.

o Rooms can be created for various topics or conversations

o Chat can be done with other areas via Internet connection.

* If you are not able to hit W9SEM-7 directly (located in downtown Indy), you may be able to utilize the Node of another station to connect to it.

73,
Don W9DEW

3325. Joseph Lawrence K9RFZ running for section manager

Yahoo group: IndyHamRadio
Date: 2014-04-14 21:18:38 UTC
From: Ivin Flint
Topic: 3325 Message: 3325
Attachments: 1 described; binary payloads are missing from this source WARC

WA5LOU our section manager posted his views and has a website anyone can look at to see is plans if elected to continue as section manager. Below is an email and attachment from K9RFZ who is running as well. I am not trying to endorse either one, but if you are a ARRL member in central indiana I hope you will take a look at both candidates and make a informed decision on who you feel will best serve you as our ARRL section manager representative.

Ivin W9ILF

To: ARRL Indiana Section Members and Clubs

Many of you recently received emails from the incumbent Indiana Section Manager, Lou Everett Sr. announcing his re-election campaign with the dismissive statement, "…there is someone running against me". In case there was any mystery, I'm Joseph Lawrence, K9RFZ and I'm asking for your support in the upcoming ARRL Indiana Section Manager election. I chose to wait until now, as the ballots are about to be sent from ARRL HQ, to start campaigning because that was the tradition in Indiana prior to the incumbent's style in 2012.

The incumbent has created a re-election campaign website and coined a slick political slogan to get your vote. I'd prefer to speak with each of you in person, but time and distance doesn't allow that. Instead, I've attached a *.PDF file to explain in straight forward no nonsense terms why I'm asking for your vote. I discuss specific solutions to problems and offer real concrete improvements to accomplish. Please take a few minutes to read some of the ideas I'm proposing.

In the next week, you'll receive a ballot from ARRL HQ. You'll receive a brief 300 word statement from each candidate to help make your decision. Feel free to reply to this email or call me with questions you want answered to help make your decision. You're welcome to forward this message to friends I may have missed in the distribution and I apologize in advance if you get more than one copy.

Before marking your ballot, take the time to gather facts about each candidate and look beyond the hype. Decide where you want the Indiana Section to be in two years and vote for the candidate you believe is most qualified and most likely to reach that goal. I hope you'll choose to give me the opportunity to serve as your Indiana Section Manager for the next two years.

73,
Joseph Lawrence, K9RFZ
(260) 373-1986
2014 Candidate for ARRL Indiana Section Manager

If you would like to ride the bus to Dayton Hamvention on May 17, we still have some seats left. Attached is all of the info needed for registration. The bus has two pick-up points in Indy, stops in Richmond, IN at McDonalds for breakfast and drops you at the door at Hara Arena. The bus remains on the lot for the day so if you make purchases, you can take things back to the bus for safe keeping. You can also go there to rest if you would like to. On the way back, there will be a stop in Richmond, IN at the MCL.

Hope to see you all in Dayton.

Rhonda

Upcoming Centennial Convention Forums (Friday & Saturday)
Thursday Training Track Details
(updated April 9, 2014)

Leadership and Training Tools for Amateur Radio
Facilitator: Katie Allen, WY7KRA
Speakers:
“Outreach – Recruiting, Training and Retraining: Creating the Lifetime Amateur” – Ward Silver, NØAX
“Building a Successful Club” – Thomas Sly, WB8LCD
“Using Web-based Tools for Success” – Bill Edgar, N3LLR
“Applying Project Management Strategies to Promote Successful Amateur Radio Ventures” – Paul Beeman, W2PB
“Using Social Media To Support and Grow Amateur Radio” – Katie Allen, WY7KRA
Public Service Communications Academy
Facilitator: Mike Corey, KI1U
Confirmed Speakers:
Ted Okada, K4HNL, Chief Technology Officer – Federal Emergency Management Agency (FEMA)
Ralph Haller, N4RH, Chairman - National Public Safety Telecommunications Council (NPSTC)
Keith Robertory, KG4UIR, National Disaster Services Technical Manager - American Red Cross (ARC)
James McGowan, Senior Director Strategic Initiatives - National Volunteer Organizations Active in Disasters (VOAD)
Sid Caesar, NH7C, Chief - Division of Emergency Management, Bureau of Indian Affairs (BIA)
RFI-101
Facilitator: Ed Hare, W1RFI
Confirmed Presenters:
Mike Martin, K3RFI – RFI Services, Inc
Mike Gruber, W1MG - ARRL Laboratory EMC Engineer
Topics will include:
EMC Fundamentals
ARRL’s EMC Work with Industry
The FCC Rules pertaining to RFI
How to avoid some common RFI mistakes
How to find RFI sources
An Introduction to Amateur Satellites
Facilitator: Barry Baines, WD4ASW
Since Amateurs heard the first transmissions of Sputnik and OSCAR-1, they have asked, “How can I do that?” This daylong session will provide best practices and helpful hints that

will allow even the modest station to be used to communicate with the amateur “birds in space.”

Confirmed Presenters:
Patrick Stoddard, WD9EWK/VA7EWK - AMSAT Director-Field OperationsBurns Fisher, W2BJ - AMSAT Fox-1 Software Team Co-Leader
Peter Portanova, W2JV - AMSAT Area Coordinator
E. Michael McCardel, KC8YLD - AMSAT V.P. for Educational Outreach
Joe Spier, K6WAO

Topics will include:
An Overview of Amateur Radio in Space
Understanding Satellite Orbits and How to Track Satellites
How to Configure and Operate Your Equipment to Work the FM Satellites (Including Operating Techniques and Etiquette)
How to Configure and Operate Your Equipment to Work the CW/SSB Satellites (Including Operating Techniques and Etiquette)
Telemetry and Data Collection from Amateur Radio Satellites AMSAT's Next Satellite: Fox-1

DX University
Facilitators: Wayne Mills, N7NG and Dave Anderson, K4SV
Whether you are new to DXCC or striving for the #1 Honor Roll, the presentations of DXU will help you develop skills to work the rare ones. The organizers and presenters will share with you the challenges faced on both sides of the pile-ups. Specific topics and presenters to be announced…
Contest University
Facilitator: Tim Duffy, K3LR
Entering its tenth year, CTU offers the opportunity for both the new contester as well as the top competitive operator to hone their skills. Learn from some of the top contesters in the world, many whom will have just been part of the WRTC Championships held the weekend before the ARRL Centennial Convention. Specific topics and presenters to be announced…
Amateur Radio Legal Seminar
Facilitators: Bart Lee, K6VK and Chris Imlay, W3KD
This one-half day CLE credit course will focus on the latest issues in Amateur Radio law. Practicing attorneys will be able to obtain CLE credit for attending the session (an extra fee is required). The session will also be open to non-attorneys wishing to learn more about issues in Amateur Radio law as well on a “space available” basis after June 1. (Note: This session will be held at the Hartford Downtown Marriott adjacent to the Convention Center.)Lunch: All convention registrants attending a Thursday Training Track may attend the lunch, which will be held in the ARRL Centennial Ballroom. Price included in the 3-day ticket.

Ran into the American Legion hams at Dayton. They are looking to build amateur radio into the Legion like Legion Riders have become.

Their club is K9TAL. Wonder if the USS Indianapolis station at the War Memorial might be associated with the Legion.
http://www.legion.org/hamradio http://www.legion.org/hamradio

They now have 1700 licensed hams in the Legion.

The problem with the Yaesu Fusion system is that it is only doing Tier 1 DMR. The Motorola and Kenwood DMR radios do Tier 2/3 (TDMA) which allows trunking.

Yaesu would do far better if they would standardize with the DMR standard at Tier III.

Here is an SDR HT that is being priced at about $200. The one model does D-Star (CS-7000 I believe) and can be migrated to DMR.

3333. Meteor Scatter Tonight?

http://www.chicagotribune.com/news/chi-meteor-shower-20140523,0,5795758.story

New once-in-a-lifetime meteor shower could be spectacular
A first-of-its-kind meteor shower is expected to happen Friday night and into early Saturday morning. The Camelopardalid meteor shower is formed from dust from a periodic comet called the 209/LINEAR.

By Blaine P. Friedlander Jr.Washington Post
7:20 a.m. CDT, May 23, 2014

Late Friday night into Saturday morning, North America will probably see a brand-new meteor shower, and there's a good chance that these gentle shooting stars will become a torrential meteor storm and provide quite a light show.
The new meteors — the Camelopardalids — are dusty remnants of a comet discovered in 2004. With clear skies, sky gazers may see meteor activity beginning at 10:30 p.m. Friday, according to Bill Cooke of the Meteoroid Environment Office at NASA's Marshall Space Flight Center in Huntsville, Alabama.
Astronomers predict that the peak will occur between 2 and 4 a.m. Eastern time Saturday, but Cooke believes that gazers may be able to catch sight of shooting stars through the dawn before sunrise washes them out.
* RELATED
* Graphic: Where to look for meteor shower
* Why we haven't seen it before?
* Infographic: Beautiful, brand-new meteor shower? Fingers crossed
* A once-in-a-lifetime meteor shower may be on its way
"The general consensus is that this week's Camelopardalids will be comparable to a very good Perseid meteor shower with an added possibility of a storm," said Geoff Chester, astronomer at the U.S. Naval Observatory. "I'm planning to be out watching."
The best way to spot the shooting stars? Look up, Chester said. The meteors will be visible in all parts of the sky. The shower's radiant — from which meteors seem to come — will loom in the northern sky, close to Polaris, the North Star. Specifically, the meteors will appear to emanate from the constellation Camelopardalis, the giraffe. Chester suggested star watchers find coffee, have patience and look toward the dome of the heavens.
For this never-before-seen shower, astronomers are predicting from 30 to perhaps hundreds of meteors an hour at the peak. It is expected that the meteors will be relatively plodding, traveling 12 miles per second. Perseid meteors, which usually appear in August, scoot along at 25 miles per second, and the Leonid meteors, which show up in November, zip through the skies at 45 miles per second.
But the thing about slow meteors is that they look like a bright star falling, Chester said.
Meteors occur when Earth's atmosphere strikes the dusty trail left by comets long ago. These trails contain sand-grain-size particles, and when these flecks encounter Earth's atmosphere, they light up and vaporize, creating beautiful streaks.
Cooke said the comet that created the Camelopardalids, Comet 209P/LINEAR, was discovered in 2004. Astronomers calculated that the comet returns about every five years, in an orbit between the sun and Jupiter. "We don't know what the meteor shower's intensity will be,"

Cooke said. "If Comet 209P/LINEAR was a poor producer of debris, we'll see nothing. But if the comet was more active 200 or 300 years ago, we'll see a decent show. What happens this Saturday morning was determined a few hundred years ago."

The comet passed the sun May 6, and it will pass within about 5 million miles of Earth on May 29. It will be will be a telescopic object, beyond the range of the human eye.

Cooke said that thanks to Jupiter's gravitational pull, the comet's debris trail is intersecting the Earth's orbit for the first time.

New meteor showers are found fairly often, Cooke said, but with falling star rates so low "even an experienced observer would not notice them." He added, "New showers with rates of tens or hundreds per hour are very rare."

Chester, of the Naval Observatory, said photographers with a digital SLR camera will easily be able to capture the shooting star glory. On a tripod, aim the camera to the northern sky, above Polaris. Use a wide-angle lens, set the film speed to its highest rating. Set the shutter for a long exposure.

The best part of this kind of cosmic light show is that no experience is needed, only the willingness to step outside.

"You don't have to be an expert to enjoy the meteor shower," said Greg Redfern, an astronomer with the Northern Virginia Astronomy Club. "This shower favors North America, the one time when we luck out. We're in a prime-time burst window."

3334. MFJ-401D Econo Keyer II For Sale

Yahoo group: IndyHamRadio
Date: 2014-05-26 15:02:50 UTC
From: Ray, K9DUR
Topic: 3334 Message: 3334

I have a MFJ-401D Econo Keyer II for sale. The list price from MFJ is $69.95 plus shipping. The price from R&L is $61.95 plus shipping. I am asking $40 shipped.

This little electronic keyer also makes a good code practice oscillator for the beginning CW operator.

If interested, contact me direct at k9dur@....

3336. FLEX-5000A Software-Defined Transceiver For Sale

Yahoo group: IndyHamRadio
Date: 2014-05-26 17:08:18 UTC
From: Ray, K9DUR
Topic: 3336 Message: 3336

I am selling my FLEX-5000A software-defined transceiver. It covers 160m to 6m with 100W output on all bands. The radio has an automatic antenna tuner & a 2nd receiver installed. It comes with a Granite Digital firewire cable. The radio has been used only in a non-smoking environment.

The radio just came back from the manufacturer where they fixed an issue with the ATU and then went over it to make certain that it was up to snuff in all other respects.

I am asking $2500 shipped (UPS Ground) to the lower 48. For other destinations, I will have to check into shipping costs.

If you have any questions, contact me direct at k9dur@... or by phone at (812)236-6522.

73, Ray, K9DUR

3337. WI9RES Repeaters Changing PL Tone on June 7

Yahoo group: IndyHamRadio
Date: 2014-05-26 23:54:08 UTC
From: Stephen Parker
Topic: 3337 Message: 3337

On Saturday, June 7, all three of the WI9RES repeaters will change their CTCSS/PL tone from 88.5 Hz to 131.8 Hz. All radios must be reprogrammed to use a CTCSS tone of 131.8 Hz in order to access the WIRES repeaters after that date.

This is being done to comply with new guidelines from the Indiana Repeater Council (IRC). They have redrawn the boundaries that define the geographical "areas" in the state for repeater coordination. Different PL tones are assigned to each area to assist in avoiding co-channel interference.

The number of areas in Indiana have been reduced from 9 to 7. These are the sections of the state that are listed in the ARRL's repeater directory. The reduction in number will simplify and more clearly define the geographical areas. In addition, the PL areas assigned by the IRC did not previously correspond to the ARRL's geographical sections. That has now been remedied with the recent IRC changes. PL areas will now mirror the repeater location regions.

What that means for us, is that repeaters in Tippecanoe and Clinton counties are now in the Northwest area. The 88.5 Hz PL we've been using is assigned to the West Central area, and repeaters in the Northwest are assigned either 173.8 or 131.8 Hz. We will be using 131.8 Hz for all of the WI9RES repeaters.

The change will take place on Saturday, June 7. The Rossville repeaters (145.370 & 443.500) will be changed to 131.8 Hz PL sometime that morning. The PL change on the 147.135 repeater in West Lafayette will take place immediately following the siren test net, shortly after 11:00 a.m. We are asking everyone to stay on the air after the net to help test the switch to the new PL tone.

Please be ready to reprogram your radios, and help others who may find that task a bit challenging. We understand this is not a trivial change. However, we feel it is necessary to continue to operate our repeaters according to accepted, community standards, and to honor the amateur code and follow good operating practices.

We appreciate your patience and understanding. WIRES plans to continue serving the amateur community by providing quality infrastructure with these repeaters. Please help spread the word about the upcoming PL tone change. Thanks.

3338. June VHF QSO Party and... The return of K9ZF /Rover!

Yahoo group: IndyHamRadio
Date: 2014-06-08 21:54:12 UTC
From: Dan Evans
Topic: 3338 Message: 3338

The return of K9ZF /Rover!

The 2014 ARRL June VHF QSO Party Begins 1800 UTC Saturday, runs through 0259 UTC Monday (June 14-16, 2014).

http://www.arrl.org/june-vhf

After several years of being inactive, I'm hitting the road again. Over the last 6 months, I've rebuilt my Rover station, so it's NEW AND IMPROVED!

6 meters, FT897D, 100 watts, Moxon rectangle.

2 meters, FT897D, Mirage brick 160 watts, 17 elements. [yes, 17! I like big antennas!]

222, HTX10, RVHFS transverter, mirage brick 130 watts, 13 elements.

432, FT897D, Mirage brick 100 watts, 18 elements.

SSB, CW, FM, FSK, JT65.

Here is the planned schedule:

1800-1900 EN71 [near Rochester and Warsaw Indiana]

1930-2030 EN61

2130-2230 EN60 [north of Indy, around Carmel Indiana]

2300-0000 EN70

0100-0130 EM69 [near Columbus, Indiana]

0200-0230 EM79

0300-? EM78 home overnight [Charlestown, Indiana. EM78el]

1200-1500 EM68 [Salem, Indiana]

1530-1830 EM78 [Henryville, Indiana]

1930-2030 EM67 [between Louisville and Fort Knox, KY]

2100-2200 EM77

The full story:

Planning a Rover route is pretty tricky. Honestly, my last few Rover trips have been a bit of a disappointment. Activating 3, 4, or 5 grids and having to really scrape for every QSO, even when your station is working well can be disappointing. However, with gas at $4/gallon, the 10 and 12 grid routes I used to plan for are just out of sight. So the key, for me, is to get close enough to activity centers, without spending a fortune on gas. So this time I want to try something a bit different. It always seems to me like I should be working more stations in the Chicago metro, and Michigan areas. The northern most grids I usually activate are EN60 & EN70. This leaves me roughly 150 miles from Chicago, and the southern Michigan border. Normally, I can work an "average" station at 150 miles from the Rover, no problems. So it always seems like I should be picking up more, but so far it hasn't been the case. Sure, I pick up a few of the big guns, but not many. So this time out I am going to head farther north and pick up EN61 & EN71. I'm hoping the move further north along with improvements to the station will pay off with a lot more QSO's. So I will start in EN61 & EN71 trying to stick to about an hour per grid. I will then head south to EN60 & EN70, to my usual spot just north of Indianapolis. Again, try to stick to an hour in each grid, then head south. EM79 and EM69 are usually problems. There just aren't any good spots in EM79 that I have found. Average is about the best you can hope for. There is a great site for EM69 over in Brown county state park, but it takes a couple of hours to get to it, so I usually just settle for average again. After an hour in each of these grids, I will head south again. By the time I get down to EM78, it will be getting pretty late in the evening, so I will likely try to pick up a few QSO's, from the driveway at home, then get some sleep overnight. Early Sunday morning I will hit one of my favorite hill tops in EM68. From here I have worked north to Michigan and south to Georgia on 2 meters! Good band conditions help, of course, but this is a 1000' peak, and an excellent site. I will likely spend a couple of hours here, then head to an almost equal site in EM78 about 30 minutes away. After a couple of hours here, I will pack up and head south again and activate EM67 and EM77. The sites I normally do there are only a little above average.

So, if all goes well, that will be 10 grids activated, more miles than I care to think about, 1000's of QSO's, and a top ten score, hi hi! Yeah, right.

73 & GL!

Dan

3339. ARRL June VHF QSO Party, 1800 UTC Saturday, 6/14 - 0259 UTC Monday, 6/16

Yahoo group: IndyHamRadio
Date: 2014-06-11 19:03:06 UTC
From: Mark Thompson
Topic: 3339 Message: 3339

http://www.arrl.org/june-vhf

ARRL June VHF QSO Party Rules
1. Objective: To work as many amateur stations in as many different 2 degrees by 1 degree grid squares as possible using authorized frequencies above 50 MHz. Foreign stations work W/VE amateurs only.
2. Date and Contest Period: The second full weekend in June. Begins 1800 UTC Saturday, ends 0300 UTC Monday (June 14-16, 2014).
3. Entry Categories:
3.1. Single Operator: One person performs all transmitting, receiving, spotting, and logging functions as well as equipment and antenna adjustments. Only one transmitted signal is permitted at any given time. Use of spotting assistance or nets (operating arrangements involving other individuals, DX-alerting nets, internet chat rooms, packet, etc) is not permitted.
3.1.1. Single Operator Low Power:
3.1.1.1. Power limits on any band may not exceed the following:
3.1.1.1.1. 50 MHz and 144 MHz--200 W PEP.
3.1.1.1.2. 222 MHz and 432 MHz--100 W PEP.
3.1.1.1.3. 902 MHz and above--50 W PEP.
3.1.2. Single Operator High Power: Power limits on any band exceeds the limits for the Single Operator Low power.
3.1.3. Both Single Operator High and Low Power stations compete for all-band and single-band awards.
3.1.4. Overall and single-band winners are recognized both in QST score listings and in awards offered.
3.2. Single Operator Portable:
3.2.1. Ten (10) W PEP output or less.
3.2.2. Portable power source.
3.2.3. Portable equipment and antennas.
3.2.4. Single Operator Portable stations must operate from a location other than a permanent station location.
3.2.5. Single Operator Portable stations may not change locations during the contest period outside of the original 500-meter diameter permitted circle.
3.3. Single Operator, 3-Band:
3.3.1. Restricted to 50, 144 and 432 MHz.
3.3.2. Power limits are 100 W PEP on 50 and 144 MHz, 50 W PEP on 432 MHz.
3.4. Single Operator, FM Only
3.3.1. All QSOs must be made using Frequency Modulation (FM).
3.3.2. Restricted to 50, 144, 222 and 440 MHz.
3.3.3. Power limits are 100 W on all bands.
3.5. Rover: A rover is comprised of no more than two operators that moves among two or more grid squares during the course of a contest. An operator may perform any or all rover functions, but a driver's function shall be limited to driving the vehicle. Drivers may be switched out during the event. Any number of observers is also allowed, however observers

may not perform any rover function at any time. Rover vehicles with only one occupant are allowed to perform all functions listed above.
3.5.1. A rover vehicle may transport only one station using a single call sign. An exception is provided for in "General Rules for All ARRL Contests" number 3.5 (Family Rule).
3.5.2. A rover may not operate with more than one call sign.
3.5.3. Rover vehicles must transport all the equipment, power supplies, and antennas used at each operating site.
3.5.4. Rovers MUST sign "rover" on Phone and /R on CW and digital modes after their call sign.
3.5.5. All Rovers are encouraged to adopt operating practices that allow as many stations as possible to contact them.
3.5.6. Rover operators may submit separate logs for single operator (fixed station) in addition to their rover entries. Rovers submitting a score for inclusion in a club competition must also include a secondary summary sheet indicating the portion of the score that counts for the club score if any of the QSOs submitted take place outside of their club's territory.
3.5.7. Rovers are permitted to use APRS. Rovers using APRS transmit only their call sign and position. Any multi-op station may access rover APRS data directly or via the Internet.
3.5.8. A rover may not make more than 100 QSOs with any other one rover.
3.6. Limited Rover. Same as the "Rover" class above, but competes using only the lowest four bands available for any given contest (6M - 432 MHz for VHF+ contests, 222MHz - 1.2 GHz for August UHF). Output power limits shall be the same as those defined for the Single Operator Low Power category (3.1.1)
3.7. Unlimited Rover. Same as “Rover” class above, but Unlimited Rovers may use more than two operators and are exempt from rules 3.5.3 and 3.5.8.
3.7.1. Unlimited Rover scores may NOT be applied to a club score for Club Competition.
3.8. Multioperator (includes Single Operator stations that use spotting assistance:
3.8.1.Multioperator (Unlimited): Stations submit logs with more than four bands used.
3.8.2.Limited Multioperator: Stations submit logs with a maximum of four bands used. (Logs from additional bands used, if any, should be included as checklogs.)
4. Exchange: Grid-square locator (see April 1994 QST, p 86).
    4.1. Exchange of signal report is optional.
5. Scoring:
    5.1. QSO points:
        5.1.1. Count one point for each complete 50- or 144-MHz QSO.
        5.1.2. Count two points for each 222- or 432-MHz QSO.
        5.1.3. Count three points for each 902- or 1296-MHz QSO.
        5.1.4. Count four points for each 2.3 GHz (or higher) QSO.
    5.2. Multiplier: The total number of different grid squares worked per band. Each 2 degrees by 1 degree grid square counts as one multiplier on each band it is worked.
    5.3. Final score: Multiply the total number of QSO points from all bands operated by the total number of multipliers for final score.
    5.4. Rovers only: The final score consists of the total number of QSO points from all bands times the sum of unique multipliers (grid squares) worked per band (regardless of which grid square they were made in) plus one additional multiplier for every grid square from which they successfully completed a contact.
        5.4.1. Rovers are listed in the contest score listings under the Division from which the most QSOs were made.
6. Reporting:
    6.1. Entries may be submitted as follows:

6.1.1. Electronic submissions in the Cabrillo format may be emailed to JuneVHF@...

6.1.2. Hand written paper logs or diskettes mailed to June VHF, ARRL, 225 Main St, Newington, CT 06111.

6.1.3. Web entries submitted via the web-based applet.

6.2. Entries that have been electronically generated must submit their log file in the Cabrillo file format. Paper print outs of electronic files are not acceptable substitutes.

6.3. Entries must be emailed or postmarked no later than 0300 UTC Wednesday, July 16, 2014. Late logs may be designated as checklogs only.

7. Miscellaneous:

7.1. Stations may be worked for credit only once per band from any given grid square, regardless of mode. This does not prohibit working a station from more than one grid square with the same call sign (such as a Rover).

7.2. Only one signal per band (6, 2, 11/4, etc) at any given time is permitted, regardless of mode.

7.3. Multi-operator stations may not include QSOs with their own operators except on frequencies higher than 2.3 GHz. Even then, a complete, different station (transmitter, receiver and antenna) must exist for each QSO made under these conditions.

7.4. Forms may be obtained by:

7.4.1. Downloading the form [PDF]

7.4.2. Sending an SASE with 2 units of postage to June VHF Form Request, ARRL, 225 Main St, Newington, CT 06111.

8. Awards: Certificates will be awarded in the following categories:

8.1. Single Operator

8.1.1. Top Single Operator Low and High power entry in each ARRL/RAC Section.

8.1.2. Top Single Operator Low and High power on each band (50, 144, 222, 432, 902, 1296 and 2304-and-up categories) in each ARRL/RAC Section where significant effort or competition is evident. (Note: Since the highest score per band will be the award winner for that band, an entrant may win a certificate with additional single-band endorsements.) For example, if W1INF has the highest Single-Operator all-band score in the CT Section and his 50- and 222-MHz scores are higher than any other CT single operator's, he will earn a certificate for being the single-operator Section leader and endorsements for 50 and 222 MHz.

8.2. Top Single-Operator Portable in each ARRL/RAC Section where significant effort or competition is evident. (Single-operator Portable entries are not eligible for single-band awards.)

8.3. Top Rover, Limited Rover and Unlimited Rover in each ARRL Division and Canada where significant effort or competition is evident. (Rover entries are not eligible for single-band awards.)

8.4. Top Multioperator score in each ARRL/RAC Section where significant effort or competition is evident. (Multioperator entries are not eligible for single-band awards.)

8.5. Top Limited Multioperator in each ARRL/RAC Section where significant effort or competition is evident. (Limited multioperator entries are not eligible for single-band awards.)

8.6. Plaques, if sponsored, will be awarded in the following categories:

8.6.1. Top Overall Single Operator (both High and Low Power) scorers.

8.6.2. Top Overall Single Operator Portable scorer.

8.6.3. Top Overall Rover, Limited Rover and Unlimited Rover scorers.

8.6.4. Top Overall Multi-Operator scorer.

8.6.5. Top Overall Limited Multi-Operator scorer.

8.6.6. The leading scorer in each entry category for each ARRL Division, Canada, and DX (non-W/VE) station.

9. Other:

9.1. See "General Rules for All ARRL Contests" and "General Rules for ARRL Contests on bands above 50 MHz (VHF)"

3340. Indianapolis Hamfest

Yahoo group: IndyHamRadio
Date: 2014-06-16 20:16:33 UTC
From: W9FG
Topic: 950 Message: 3340

The Indianapolis Hamfest will be held, July 12, 2014 at the Marion County Fair Grounds.

The Indoor table building, along with the forums building are air conditioned. There are several acres available for outdoor flea market.

Air conditioned buildings, acres of outdoor flea market space, and Amateur Radio Testing on the grounds, will make this year’s Hamfest, bigger and better than ever.

The Indianapolis Radio Club, W9JP, is celebrating their 100th Anniversary. Come and visit their Exhibit at the Hamfest.

For more information, and locations for Advance Sale Tickets, visit the Indianapolis Hamfest web site: http://www.indyhamfest.com/

3341. DMR is coming to Indy

Yahoo group: IndyHamRadio

From: n9nwo@...
Topic: 3341 Message: 3341

N9KYB is just finishing DMR repeater in Russiaville (IN). It will 441.850 Mhz. There are plans to put another DMR repeater just west of Lafayette (IN) in Williamsport. From what I have heard there is an extensive DMR network in northern Indiana. More people are interested in DMR than D-Star, especially after seeing the CS7000 (cost about $250 and does analog/D-Star/DMR). W9AMT is putting the finishing touches on an Indy DMR repeater that will be on 441.200/446.2

Do you feel this new technology will help bring the pricing of D Star equipped radios down?

DMR is often called the poor man's P25 (what is currently used by public safety for trunking). It is a newer technology than what D-Star has. And far more commercial vendors, and equipment, than D-Star. The one big plus is trunking where there can be multiple conversations occurring on a repeater at the same time. Thus you could have a local talk group, a regional group, nation wide group and an international group all conversing at the same time on a repeater.

Brian,

Just to let U know we are going to grand-sons wedding
on Saturday, so FD is probably out for that day.

But also to let U know about every morning at 6am, a few stations
get on FLDIGI on 3583 khz to practice various modes & options available.

Then the QIN CW net at 1200Z 3535 khz, then ITN at 1230Z, plus Mon to
Fri mornings we have the IDTN DIGITAL NET on 3585 khz often with TFC,
so FD announcements were being made there too. Plus I been including
a few FD announcements on IDTN NTS reports.

Since I am not heading up Whitley County Amateur Radio Club (WCARC)
FD activity, you can find it on one of the recent reports for IDTN.
Will try to attach latest info on WCARC FD.

Anyway, enjoy FD, be safe it really hurts to learn about accidents
on Field Days in years past & hope not to receive any bad news this
year.

Don KA9QWC

3353. National Traffic System / Field Day

Yahoo group: IndyHamRadio
Date: 2014-06-27 14:29:48 UTC
From: ivinflint@...
Topic: 3353 Message: 3353

Field day is June 28 and 29. It is an exciting time for both new licensed amateurs and also experienced. The bands will be filled with number/letter and state exchange information. Remember this is an event and geared toward information exchange. There are extra points for sending a NTS style message to your section manager and also for handling NTS traffic. Please don't overlook the oportunity to experience or demonstrate your knowledge of formal message handling through the National traffic system.

The Indiana CW Traffic net - QIN will be on 3.600 +/- (special field day frequency) and at normal times 8AM and 8PM. Below is the information taken from the ARRL concerning traffic points. Please take some time while working the event to take advantage of the efforts made to have a traffic net available to you. Have a fun and safe field day event.
Ivin W9ILF

7.3.5. Message Origination to Section Manager: 100 bonus points for origination of a National Traffic System (NTS) style formal message to the ARRL Section Manager or Section Emergency Coordinator by your group from its site. You should include the club name, number of participants, Field Day location, and number of ARES operators involved with your station. The message must be transmitted during the Field Day period and a fully serviced copy of it must be included in your submission, in standard ARRL NTS format, or no credit will be given. The Section Manager message is separate from the messages handled in Rule 7.3.6. and may not be claimed for bonus points under that rule. Available to all Classes.
7.3.6. Message Handling: 10 points for each formal NTS style originated, relayed or received and delivered during the Field Day period, up to a maximum of 100 points (ten messages). Properly serviced copies of each message must be included with the Field Day report. The message to the ARRL SM or SEC under Rule 7.3.5. does not count towards the total of 10 for this bonus. Available to all Classes. All NTS messages claimed for bonus points must leave or enter the site via amateur radio RF.

TARA - Tippecanoe Amateur Radio Association in Lafayette will be operating from McCaw Park, SW quadrant of the intersection at Creasy and Union on the east side of town. There is a fire station on the corner, then a ball field and the park as you go west from the intersection along Union.

Come on out! The plan is two HF stations, v/uhf and GOTA.

No doubt someone will be monitoring 147.135 + 131.8, if you need a talk-in. Note new PL tone for LAF area repeaters.

From IN-26 (South Street) go west from I-65 to Creasy. Don Pablo's and Kendrick Nissan are on the NW and NE corners. Go north on Creasy, left at the 2nd light to go westbound on Union, look for McCaw park on the left.

Hope to see you there!

Per K9YDO

Indianapolis Radio Club celebrating 100 YEAR ANNIVERSARY 1914 – 2014
Field Day is upon us again! W9JP will back on the air at Camp Belzer. We will start setup at 10AM on Saturday June 28th.
Bill Kennedy, WY9T will be maintaining the operating schedule for the weekend. Please Email Bill with your schedule. Bill's email is: wy9t@yahoo.com mailto:wy9t@yahoo.com and CC: k9xv@arrl.net mailto:k9xv@arrl.net.
I met with the Kevin the Camp Belzer facilitator and we are ready to go!!!! Please let us know if you would like to help setup / tear down and operate phone or CW.
Camp Belzer is located near 56th and 465 on the east side of Indy. We will be operating the entire event till 2PM on Sunday.
We will be located by the main parking lot. We will be running Class 2A this year. We will have a dedicated phone and a dedicated CW stations. Please bring your favorite headphones and/or Key. We will be running ICOM 756 Pro 2 again. We will have a 6M station for VHF.

Camping is free and coordinate with me. We will have public bathroom facilities.
Please let Bill (wy9t@yahoo.com mailto:wy9t@yahoo.com) know if you like operate Phone or CW. We will shipping out a schedule shortly. Don't wait though ... Just drop Bill an email.
Please contact me if you have any questions.
Thanks, Tom, K9XV

3357. Field Day Propagation Report

Yahoo group: IndyHamRadio
Date: 2014-06-27 20:50:01 UTC
From: Brian
Topic: 3357 Message: 3357

SB PROP @ ARL $ARLP026
ARLP026 Propagation de K7RA

ZCZC AP26
QST de W1AW
Propagation Forecast Bulletin 26 ARLP026
>From Tad Cook, K7RA
Seattle, WA June 27, 2014
To all radio amateurs

SB PROP ARL ARLP026
ARLP026 Propagation de K7RA

Solar activity continues to weaken, with average daily sunspot numbers dropping nearly 69 points to 72.3, and average daily solar flux down nearly 36 points to 98.8.

On Wednesday the predicted solar flux on Friday through Sunday, June 27-29 (Field Day weekend) was 105, 110 and 115, but on Thursday those numbers were revised downward to 100, 105 and 105. Predicted planetary A index for those dates is unchanged at 8, 12 and 8.

The predicted average solar flux for the next 7-day reporting period, June 26 through July 2 was reported as 111.4 in the propagation bulletin preview in the ARRL Letter, but that is now revised to 100.4, little above 98.8 from the last reporting period, June 19-25.

If we look at past bulletins for the 2014 calendar year, 98.8 is the lowest average flux value reported. The highest average was 201.6 in ARLP002, covering January 2-8, and the second was 180.4 in ARLP006, covering January 30 through February 5. ARLP007 reported 171.9 the following week. The weekly solar flux averages reported in bulletins 20 through 26, covering May 8 through June 25 were 157.5, 128.5, 110.3, 104.1, 146.4, 134.7 and 98.8.

How will this weekend compare with Field Day 2013? Average solar flux reported in ARLP026 for last year, which covered June 20-26 was 122, which is not much higher, but I would not expect F-layer propagation on 10 meters this weekend. However, sporadic-E is likely.

The latest predicted solar flux for the near term is 100 on June 27, 105 on June 28-29, 100 on June 30 through July 3, 130 on July 4-5, 135, 140 and 135 on July 6-8, 130 on July 9-10, 125 on July 11, and 120 on July 12-13. Solar flux continues to drift downward reaching a short term minimum of 95 on July 21, then a high of 140 on August 3.

Predicted planetary A index is 8, 12 and 8 on June 27-29, 5 on June 30 through July 1, 8 on July 2-3, then 5 on July 4-10, 8 on July 11, 5 on July 12-13, then 8, 12, 8 and 8 on July 14-17, and 5 after that, returning to 8 on July 22-23.

OK1HH predicts quiet geomagnetic conditions on June 27, mostly quiet June 28, quiet to active on June 29, quiet on June 30, mostly quiet July 1-2, quiet to unsettled July 3-4, quiet to active July 5, active to disturbed July 6, mostly quiet July 7, quiet to unsettled July 8, quiet July 9, quiet to unsettled July 10, quiet on July 11, mostly quiet July 12, quiet to unsettled July 13, quiet to active July 14, active to disturbed July 15, quiet to unsettled July 16, mostly quiet July 17, quiet July 18-20, mostly quiet July 21, and quiet to unsettled July 22-23.

OK1HH also sees enhanced solar wind on July 5-7, again on July 9-12, and on July 14-17.

Tomas Hood, NW7US, propagation editor for CQ Magazine has a special video devoted to Field Day propagation. I have not seen it yet, but Tomas tells me it will be available today at http://nw7us.us/2014FDprop . He also has a Twitter feed at http://Twitter.com/NW7US . Also check out this interview with him at https://www.youtube.com/watch?v=ph94GAOJeUQ and hear how he was mesmerized at a young impressionable age by the programming on WWV.

Space.com has a video about the solar telescope at California's Big Bear Solar Observatory. See it at http://www.space.com/26343-largest-solar-telescope-sun-video.html .

Thanks to John Campbell, K4NFE of Huntsville, Alabama for sending along an article and video about the current solar mini-max, as they call it. Read it at http://www.space.com/26287-sun-solar-cycle-mini-maximum-video.html .

Jeff Hartley, N8II of Shepherdstown, West Virginia sent in this report about the All Asia CW Contest last weekend:

"The All Asia CW this year was quite a bit fun on 15 from here, but the Asian activity level could have been much higher. In particular, only a few Russian stations were worked. At the start of the contest, conditions were not very good, but each morning and evening was better than the one before as the contest progressed until Sunday conditions (after 1200Z) were extremely good especially for a SFI of only 98. The first night I was only able to work Japan and Sakhalin Island despite hearing several Chinese stations and 9V1YC.

"Saturday morning I was able to log 9M2 and several HS prefixes along with UN8 and some western Asians. Japan was improving, but limited mainly to a few big guns before I had to QRT at 1400Z to get ready to attend the W3LPL open house, a really nice and enjoyable well attended event.

"Saturday evening was decent to JA, but was not able to run that many JAs. I finally broke through to several Chinese and more Thai stations as well as logging JT1. Around 0430Z, 15 was still open to big gun JAs, HS, and across to UA9C, pretty amazing with the low solar flux!

"From 1200Z onward the band probably never closed to Japan and all of East Asia was loud peaking to SE Asia around 1500Z. Two 9V1s were logged along with BV1, BX4, BH3, HL3, E29, XV9, XW3, BA4, VU3, and many new JA Qs and prefixes. If I could hear a station, I could log him pretty easily with 200 W to a 5 El Yagi.

"Sunday around 2000Z found JA signals about as loud as they can get at this QTH, but alas it was Monday morning in Japan, so they were mostly off to work.

"I QRT'ed for a dinner out and noticed what almost had to be out of area Es QRM on the FM broadcast band while driving. 6 meters was open very well to MO and southern IL and IN when I fired up at around 0030Z. The opening extended a bit farther south and as close as eastern TN and central KY before I QRT'ed around 0200Z. The skip zone was quite short for 50 MHz allowing W4SOH to work me for state 49 and KA4MAY for his 48th state on 6 meters."

Bob Foster, N9BGC of Waverly, Iowa offers some tips for modest stations operating Field Day:

"1. Try the 'hunt and pounce' method.

"2. Tune slowly. Think of the Jodie Foster movie, 'Contact.' Her Ham father admonished her, 'Small steps, Ellie, small steps.'

"3. Don't try to bust into a pileup for very long. Move on and come back. The big gun will still be there.

"4. Stations are hungry for contacts as the event winds down. That's when they often make an extra effort to work the little guys.

"The band doesn't go dead just because Field Day ends. I often work some pretty cool QSOs, once the band clears of Field Day traffic."

Also, remember in Field Day there are no rare sections, states or countries. Every unique contact on a band or mode counts the same. In fact, some casual operators don't even log the exchange or the time, just the callsign on a dupe sheet, a separate sheet for each band/mode combination.

If you would like to make a comment or have a tip for our readers, email the author at,k7ra@....

For more information concerning radio propagation, see the ARRL Technical Information Service web page at http://arrl.org/propagation-of-rf-signals. For an explanation of the numbers used in this bulletin, see

http://arrl.org/the-sun-the-earth-the-ionosphere. An archive of past propagation bulletins is at http://arrl.org/w1aw-bulletins-archive-propagation. More good information and tutorials on propagation are athttp://k9la.us/.

Monthly propagation charts between four USA regions and twelve overseas locations are athttp://arrl.org/propagation.

Instructions for starting or ending email distribution of ARRL bulletins are athttp://arrl.org/bulletins.

Sunspot numbers for June 19 through 25 were 108, 75, 75, 95, 64, 37, and 52, with a mean of 72.3. 10.7 cm flux was 111.1, 102.2, 101.2, 94.2, 92.6, 93.5, and 97, with a mean of 98.8. Estimated planetary A indices were 8, 9, 6, 4, 5, 6, and 6, with a mean of 6.3. Estimated mid-latitude A indices were 10, 10, 7, 7, 7, 7, and 8, with a mean of 8.

It's great to see all the announcements of Indiana Field Day sites...but I know there has to be more, so keep them rolling in!

So what kind of food will your group be serving? We'll be having hot dogs and chips and pop...nothing too exotic unless someone brings it with them, but that's the great thing about Field Day, you never know what will happen next!

SB QST @ ARL $ARLB015
ARLB015 House Bill Would Require FCC to Extend PRB-1 Coverage to
Restrictive Covenants

ZCZC AG15
QST de W1AW
ARRL Bulletin 15 ARLB015
>From ARRL Headquarters
Newington CT June 28, 2014
To all radio amateurs

SB QST ARL ARLB015
ARLB015 House Bill Would Require FCC to Extend PRB-1 Coverage to
Restrictive Covenants

A bill with bipartisan support has been introduced in the US House of Representatives that calls on the FCC to apply the "reasonable accommodation" three-part test of the PRB-1 federal pre-emption policy to private land-use restrictions. HR.4969, the "Amateur Radio Parity Act of 2014" was introduced on June 25 at the request of the ARRL, which worked with House staffers to draft the proposed legislation. The bill's sponsor is Rep Adam Kinzinger (R-IL). It has initial co-sponsorship from Rep Joe Courtney (D-CT). If the measure passes the 113th Congress, it would require the FCC, within 120 days of the Bill's passage, to amend the Part 97 Amateur Service rules to apply PRB-1 coverage to include homeowners' association regulations and deed restrictions, often referred to as "covenants, conditions, and restrictions" (CC&Rs). Presently, PRB-1 only applies to state and local zoning laws and ordinances.

"There is a strong federal interest in the effective performance of Amateur Radio stations established at the residences of licensees," the bill states. "Such stations have been shown to be frequently and increasingly precluded by unreasonable private land-use restrictions, including restrictive covenants."

The 11-page PRB-1 FCC Memorandum Opinion and Order is codified at Part 97.15(b) in the FCC Amateur Service rules, giving the regulation the same effect as a federal statute. In short, PRB-1 states that local governments cannot preclude Amateur Radio communications; they must "reasonably accommodate" amateur operations, and the state and local regulations must be the minimum practicable regulation to accomplish a legitimate governmental interest. Subject to those guidelines, municipalities may still establish regulations with respect to height, safety, and aesthetic concerns.

For 28 years, FCC regulations have "prohibited the application to Amateur Radio stations of state and local regulations that preclude or fail to reasonably accommodate Amateur Service communications," the bill points out, "or that do not constitute the minimum practicable regulation to accomplish a legitimate state or local purpose." Since PRB-1 was enacted, the FCC has said several times that it would prefer to have some guidance from Congress before extending the policy to private land-use regulations.

HR.4969 has been referred to the House Energy and Commerce Committee. Rep Greg Walden, W7EQI (R-OR), chairs that panel's Communications and Technology Subcommittee, which will consider the measure.

ARRL Hudson Division Director Mike Lisenco, N2YBB, is a principal advocate for the current legislative initiative to gain PRB-1 recognition for CC&Rs. Lisenco said the most urgent task now is to get additional co-sponsors to sign onto HR.4969.

Had a great time with the fine folks at Midstate Amateur Radio Club. Got to meet a bunch of hams I have only spoken with on the radio. Coolest thing was at about 11:45PM I was in the basement of the EOC on the FT 857 running CW on 80m when I worked W2SEX out of WNY. Hahahah...what a call sign. We feasted on grilled tube steaks and mini bags of assorted chips. Delightful!

Tossed in the towel at 12:30AM and came home to get some sleep ... big day tomorrow.

So from WD9RDF operating as 4F IN - good night....the station is now under the control of the night shift!

W9DXCC 2014 Program

Rick Roderick K5UR - Banquet Speaker
We are pleased to have as our Saturday banquet speaker Rick Roderick K5UR. Rick lives north of Little Rock, Arkansas on a 50 acre hilltop QTH. He's been a ham for over 45 years and is a Life Member of the ARRL. Rick has held numerous ARRL volunteer positions continuously for all of those 45 plus years. He has been on the ARRL Board of Directors for 22 years and currently serves as First Vice President. He has served on all standing committees of the ARRL Board of Directors and on numerous other committees and task forces of the Board. He also served on the DX Advisory Committee and was chairman for many years. He was instrumental in the creation and implementation of Logbook of the World and the DXCC Challenge Award. Rick has earned numerous HF and VHF/UHF operating and achievement awards. He is an avid DXer with 370 countries worked, including 318 countries on 160 meters, 351 countries on 80 meters, 353 countries on 40 meters. He holds DXCC on 10 bands and is #7 in the world on the DXCC Challenge Award. Rick holds over 20 different Worked All Zones Awards, and was one of the first to achieve WAZ on 160 meters. On VHF/UHF, he holds many records, including the world distance record for QSO's on 2 meters meteor scatter and 222 MHz tropo. He was one of the first to work all continental 48 states on 2 meters without the use of moonbounce, 47 states in one year. Rick is #2 in the world on 6 meters VUCC and #1 in the world on VUCC for 2 meters, 222 MHz, 432 MHz, and 1296 MHz for non-EME, and received the Fred Fish Memorial Award #3 for having worked all grid squares in the United States on 6 meters.

FT5ZM - Amsterdam Island
A team of 14 operators representing 7 countries activatedFT5ZM in January 2014 andmade nearly 165,000 QSOs. Amsterdam Island was #4 on the list of most-wanted entities world-wide. Ralph Fedor KØIR will share their experience with us. Also on the FT5ZM team

were Craig Thompson K9CT and Jerry Rosalius WB9Z, well-known to W9DXCC attendees. You can read about their adventures on the FT5ZM website.

Topband DXpedition Operations - FT5ZM vs K9W Wake Island
Craig Thompson K9CT will compare the 160 meter operations from the DXpeditions to FT5ZM and K9W. Craig was at FT5ZM, and on the K9W team that made over 70,000 QSOs from Wake Island in November 2013. Other 'locals' at K9W were Ralph K9ZO, Jerry WB9Z, and Mike K9NW, with Val NV9L as Chief Pilot Relay. Over 100,000 QSOs were made, and the group honored the "Forgotten 98", a group of civilian contractors who lost their lives on Wake Island on October 7, 1943 during World War II. For more details, visit the K9Wwebsite.

DXpeditions and 21st Century Dynamics - K4UEE
Bob Allphin K4UEE knows what it takes financially to support a major DXpedition. Bob was at FT5ZM, and has now participated in, led, or co-led DXpeditions to all of the DXCC top 10 most-wanted. Bob has been on ten major DXpeditions that have made over a million QSOs, and has nine "DXpedition of the Year" plaques hanging on his wall. Bob is an active contester, participating in 38 contest DXpeditions. A member of the CQ DX Hall of Fame, current Chairman of INDEXA, current President of The KP1-5 Project, and former Chairman of the ARRL DX Advisory Committee, Bob is also a member of the VooDoo Contest Group, First Class Operator Club, A-1 Operators Club, and the Southeastern DX Club Hall of Fame.

DXpeditions for the Rest of Us - WI9WI
Jim Fitzpatrick WI9WI was first licensed 1958 at age 13 and became WI9WI in 1996. Jim's main interest in radio is contesting. He enjoys operating from DX locations, both on mini "suitcase" DXpeditions as well as from PJ2T and J7. Those are nice escapes from Wisconsin winter. Jim also operates mobile in state QSO parties, when he's not bicycling, playing ice hockey, camping or fishing.

Cycle 24 Update, FT5ZM Skewed Paths, Maunder Minimum & More

Our favorite propagation and solar cycle guruCarl Luetzelschwab K9LA will update us on the current progress of Cycle 24, with some observations on skewed paths to FT5ZM.
Is the double peak over? Will conditions be as good this Fall as they have been the past few years? Are we about to embark on another Maunder Minimum? Carl will share the latest thinking on what happens next.
(Click on the image at left to see the latest NASA prediction).
Carl has been licensed since 1961, and his interest in propagation goes back to his college days at Purdue. His website contains selected articles about propagation from his monthly propagation contributions to various ham publications. He and XYL Vicky, AA9YL, have operated from numerous DX locations, and have been dedicated QSL checkers at W9DXCC for many years.

ARRL Roundtable Discussion
Featuring:
* ARRL First VP - Rick Roderick K5UR
* Central Division Director - Dick Isely W9GIG
* Central Division Vice Director - Kermit Carlson W9XA
* DX Advisory Committee - Jim O'Connell W9WU

State-of-the-art Audio/Visual equipment for the W9DXCC program provided by Ron Steinberg K9IKZ of Rent Com. Thank you Ron!

Registration & Ticket Orders
DX University
DX University will be in session from 9am to 5pm Friday Sept. 19. Attendees will receive a pizza lunch and a thumb drive with the day's presentations. Registration fee is $30.
Convention ONLY
Includes admission to the convention, which runs from 9am to 5pm Saturday Sept. 20, all the forums, vendor displays and door prize registration. Registration fee is $45.
>
Convention AND Banquet
Includes admission to the Saturday convention, all the forums, vendor displays and door prize registration, AND the Saturday night banquet. Registration fee is dependent upon meal choice:
Banquet Choices
(All banquet choices include salad and dessert)
>Chicken - Herb Roasted Half of Chicken, with sour cream & chive mashed potatoes, broccolini, stuffed tomato, porcini gravy. Convention and Chicken banquet choice is $90.
>Pot Roast - Yankee Style Beef Pot Roast, with sour cream & chive mashed potatoes, roasted mirepoix, mushrooms, jus lie. Convention and Pot Roast banquet choice is $90.
>Salmon - Salmon with sour cream & chive mashed potatoes, broccolini, stuffed tomato.Convention and Salmon banquet choice is $90.
>Beef Tenderloin - Roasted Tenderloin of Beef, with sour cream & chive mashed potatoes, broccolini, stuffed tomato. Convention and Beef Tenderloin banquet choice is $100.
>Guest Banquet Registration
>Banquet tickets are not sold separately - guest banquet tickets are available only for Convention attendees.
>Banquet Guest prices:
>Chicken - $45.00
>Pot Roast - $45.00
>Salmon - $45.00
>Beef Tenderloin - $55.00
Raffle Tickets for DXpedition Funding

Raffle tickets to assist NCDXF DXpedition funding may be purchased in advance for $5.00 each Raffle tickets may also be purchased at W9DXCC.

To Order

To place your order via Paypal: http://www.w9dxcc.com/paypal-registration-2014.html
If purchasing by check or money order: http://www.w9dxcc.com/_pdf/W9DXCC%202014%20Registration.pdf to download the registration order form.
Purchases by check or money order should be made payable to W9DXCC, and mailed to:

W9DXCC
545 Happ Rd
Northfield, IL 60093

You will receive a payment confirmation by email, and your ticket will be held for pickup at the registration counter at the convention site.
Register Now! We look forward to seeing you at W9DXCC!

From George Bittles KB9GFB (via Tippecanoe Co. Amateur Radio Association):

"I am passing on that I learned that David C Berry (N9QP) became a silent key this morning. David was formerly a Dean at Ivy Tech and served as an OO (official observer) [coordinator for the Indiana Section] for our hobby."

I also believe that Dave was the SM for South Carolina.

Former Ivy Tech Lafayette administrator dies
vy Tech Lafayette Community College is mourning the loss of David Berry.
Berry was dean of the School of Liberal Arts and Sciences, and professor of history from July 2007 until he retired April 25, according to the college.
During his tenure, the School of Liberal Arts and Sciences saw significant growth in faculty, staff and number of sections offered. He established an academic speakers series and the Smith Scholars program.
Before coming to Lafayette, Berry was assistant dean of academic affairs for Ivy Tech in Evansville.
Berry served 14 years in the U.S. Marine Corps and was retired from the Army National Guard.
He earned a bachelor's degree in history from Mercer University in Atlanta, Georgia. He completed his master's degree in history with two additional years of graduate study from Georgia State University.
He was an amateur radio operator and served on committees at St. Matthew United Methodist Church in Frankfort.
Survivors include his wife, Jill, two daughters and a stepson. A son, Scott, preceded him in death.
Funeral arrangements are pending.
Memorial
Ivy Tech Chancellor David Bathe said community members who want to share thoughts and memories of the former dean will gather from 9:30 to 11:30 a.m. Friday in the boardroom of the Ross Administration Building, 3101 S. Creasy Lane.

3372. Northern Indiana Repeater Linking Project

Yahoo group: IndyHamRadio
Date: 2014-09-02 19:13:01 UTC
From: n9nwo@...
Topic: 3372 Message: 3372

Have seen fliers at Hamfests about this meeting. And it has been published in other groups (INARES)

Attn: Amateur Radio Clubs, Repeater Owners:

Since last spring I have talked to area clubs and discussed the fact that most of our UHF repeaters go virtually unused. Several individuals (7) met at the North Central Indiana Hamfest in April and discussed linking our repeaters together to develop a wide-area repeater network, possibly including some VHF repeaters, also.

We will be having a planning session on Saturday, September 13th in Peru (SEE ATTACHMENT FOR DETAILS) to move this project forward.

Feel free to forward this email or flyer to any club or repeater owner that you think may be interested. If you have any questions, feel free to call me at 765-244-0511 (cell).

PLEASE SEND A REPLY MESSAGE TO ME IF YOU PLAN TO ATTEND. I WANT TO MAKE SURE WE HAVE ADEQUATE SEATING.

Hope to see you there.

Bill McAlpin - WD9GIU
Miami County ARES Emergency Coordinator
President, Miami County Amateur Radio Club

Subject: URGENT - More HR 4969 Co-Sponsors Needed
To:
September 3, 2014

URGENT - We Need More HR 4969 Co-Sponsors

The ARRL is making good progress on obtaining U.S. House of Representatives Co-Sponsors for HR 4969. However, we still need more so that we can press the FCC into extending the provisions of PRB-1 to include private Conditions, Covenants, and Restrictions (CC&Rs) attached to private residential property. We need many more ARRL members sending electronic letters, email messages, etc., to their Representative requesting their co-sponsorship NOW. The U.S. House of Representatives has returned from its August vacation and this session will last about a month until they adjourn in October for election campaigning in their respective districts.

For an in-depth discussion of the rationale for submitting HR 4969, including a brief history of ARRL's struggle to obtain a level playing field for Amateur Radio Licensees living in CC&R restricted communities, please access the HR 4969 link in the horizontal scrolling portion of the ARRL website homepage.

If you do not know who is your representative, this information is available here. You will also find detailed instructions on how to communicate with your Congressman / Congresswoman.

Due to the short remaining best time (rest of September) for making your request, please send email copies to me and our new lobbying firm - The Keelen Group - in Washington, DC. The Keelen Group's email address is: help@...m Please put HR 4969 as the first word in your email Subject line. On Monday, Sep 8th, I am flying to Washington, DC to personally lobby for this very important issue on behalf of all U.S. Amateur Radio Licensees. A very large quantity of individual, well-documented, polite but firm, email requests will greatly enhance my efforts. For the first time in the 12 plus years I have been your ARRL Division Director, I believe we have a pretty good chance to get the FCC to extend PRB-1. The more individual messages sent to the U.S. House of Representatives, the better our chances of success.

Thank You -

George R. (Dick) Isely, W9GIG
ARRL Central Division Director w9gig@... dick@...

3374. ARRL September VHF Contest, 1800 UTC Saturday, 9/13 0259 UTC Monday, 9/15

Yahoo group: IndyHamRadio
Date: 2014-09-10 06:00:12 UTC
From: Mark Thompson
Topic: 3374 Message: 3374

http://www.arrl.org/september-vhf

2014 September VHF Contest: September 13-15
Objective: For amateurs in the US and Canada (and their possessions) to work as many amateur stations in as many different 2 degrees x 1 degree Maidenhead grid squares as possible using authorized frequencies above 50 MHz. Stations outside the US & Canada (and their possessions) may only work stations in the US (and its posessions) and Canada. Stations in KH0-9, KL7 & KP1-KP5, CY9 and CY0 count as W/VE stations and can be worked by DX stations for contest credit.
Full Contest Details
1. Object: To work as many amateur stations in as many different 2 degrees X 1 degree grid squares as possible using authorized frequencies above 50 MHz. Foreign stations work W/VE amateurs only.
2. Date and Contest Period: The second full weekend of September. Begins 1800 UTC Saturday and ends 0259 UTC Monday (September 13-15, 2014).
3. Entry Categories:
3.1.Single Operator: One person performs all transmitting, receiving, spotting, and logging functions as well as equipment and antenna adjustments. Only one transmitted signal is permitted at any given time. Use of spotting assistance or nets (operating arrangements involving other individuals, DX-alerting nets, internet chat rooms, packet, etc) is not permitted.
3.1.1.Single Operator Low Power:
3.1.1.1. Power limits on any band may not exceed the following:
3.1.1.1.1. 50 MHz and 144 MHz--200 W PEP.
3.1.1.1.2. 222 MHz and 432 MHz--100 W PEP.
3.1.1.1.3. 902 MHz and above--50 W PEP.
3.1.2. Single Operator High Power: Power limits on any band exceeds the limits for the Single Operator Low power.
3.1.3. Both Single Operator High and Low Power stations compete for all-band and single-band awards.
3.1.4. Overall and single-band winners are recognized both in QST score listings and in awards offered.
3.2.Single Operator Portable:
3.2.1. Ten (10) W PEP output or less.
3.2.2. Portable power source.
3.2.3. Portable equipment and antennas.
3.2.4. Single Operator Portable stations must operate from a location other than a permanent station location.
3.2.5. Single Operator Portable stations may not change locations during the contest period outside of the original 500-meter diameter permitted circle.
3.3. Single Operator, 3-Band:
3.3.1. Restricted to 50, 144 and 432 MHz.
3.3.2. Power limits are 100 W PEP on 50 and 144 MHz, 50 W PEP on 432 MHz.
3.4. Single Operator, FM Only

3.4.1. All QSOs must be made using Frequency Modulation (FM).
3.4.2. Restricted to 50, 144, 222 and 440 MHz.
3.4.3 Power limits are 100 W on all bands.
3.5. Rover: A rover is comprised of no more than two operators that moves among two or more grid squares during the course of a contest. An operator may perform any or all rover functions, but a driver's function shall be limited to driving the vehicle. Drivers may be switched out during the event. Any number of observers is also allowed, however observers may not perform any rover function at any time. Rover vehicles with only one occupant are allowed to perform all functions listed above.
3.5.1. A rover vehicle may transport only one station using a single call sign. An exception is provided for in "General Rules for All ARRL Contests" number 3.5 (Family Rule).
3.5.2. A rover may not operate with more than one call sign.
3.5.3. Rover vehicles must transport all the equipment, power supplies, and antennas used at each operating site.
3.5.4. Rovers MUST sign "rover" on Phone and /R on CW and digital modes after their call sign.
3.5.5. All Rovers are encouraged to adopt operating practices that allow as many stations as possible to contact them.
3.5.6. Rover operators may submit separate logs for single operator (fixed station) in addition to their rover entries. Rovers submitting a score for inclusion in a club competition must also include a secondary summary sheet indicating the portion of the score that counts for the club score if any of the QSOs submitted take place outside of their club's territory.
3.5.7. Rovers are permitted to use APRS. Rovers using APRS transmit only their call sign and position. Any multi-op station may access rover APRS data directly or via the Internet.
3.5.8. A rover may not make more than 100 QSOs with any other one rover.
3.6. Limited Rover. Same as the "Rover" class above, but competes using only the lowest four bands available for any given contest (6M - 432 MHz for VHF+ contests, 222MHz - 1.2 GHz for August UHF). Output power limits shall be the same as those defined for the Single Operator Low Power category (2.1.1)
3.7. Unlimited Rover. Same as "Rover" class above, but Unlimited Rovers may use more than two operators and are exempt from rules 3.5.3 and 3.5.8.
3.7.1. Unlimited Rover scores may NOT be applied to a club score for Club Competition.
3.8. Multioperator (includes Single Operator stations that use spotting assistance):
3.8.1.Multioperator (Unlimited): Stations submit logs with more than four bands used.
3.8.2. Limited Multioperator: Stations submit logs with a maximum of four bands used. (Logs from additional bands used, if any, should be included as checklogs.)
4. Exchange: Grid-square locator.
4.1. Exchange of grid square is required. Exchange of signal report is optional.
5. Scoring:
5.1. QSO points:
5.1.1. Count one point for each complete 50- or 144-MHz QSO.
5.1.2. Count two points for each 222- or 432-MHz QSO.
5.1.3. Count three points for each 902- or 1296-MHz QSO.
5.1.4. Count four points for each 2.3-GHz (or higher) QSO.
5.2. Multiplier: The total number of different grid squares worked per band. Each 2 degrees X 1 degree grid square counts as one multiplier on each band it is worked.
5.3. Final score: Multiply the total number of QSO points from all bands operated by the total number of multipliers for final score.

5.4. Rovers only: The final score consists of the total number of QSO points from all bands times the sum of unique multipliers (grid squares) worked per band (regardless of which grid square they were made in) plus one additional multiplier for every grid square activated (made a contact from).
5.4.1. Rovers are listed in the contest score listings under the Division from which the most QSOs were made.
5.4.2. Rovers who submit scores for the club competition must submit a separate summary sheet and log indicating QSOs and score if they make any contacts from outside of the club territory. The summary sheet should be clearly marked “for club competition only” and must be emailed separately to contests@arrl.org
6. Miscellaneous:
6.1. Stations may be worked for credit only once per band from any given grid square, regardless of mode. This does not prohibit working a station from more than one grid square with the same call sign (such as a Rover).
6.2. Only one signal per band (6, 2, 1 1/4, etc) at any given time is permitted, regardless of mode.
6.3. Multioperator stations may not include QSOs with their own operators except on frequencies higher than 2.3 GHz. Even then, a complete, different station (transmitter, receiver and antenna) must exist for each QSO made under these conditions.
7. Awards:
7.1. Certificates will be awarded in the following categories.
7.1.1. Top Single Operator High and Single Operator Low power in each ARRL/RAC Section.
7.1.2. Top Single Operator High and Single Operator Low power on each band (50, 144, 222, 432, 902, 1296 and 2304-and-up categories) in each ARRL/RAC Section where significant effort or competition is evident. (Note: Since the highest score per band will be the award winner for that band, an entrant may win a certificate with additional single-band endorsements.) For example, if KA1RWY has the highest single-operator low-power all-band score in the CT Section and her 50- and 222-MHz scores are higher than any other CT single operator’s, she will earn a certificate for being the single-operator Section leader and endorsements for 50 and 222 MHz.
7.1.3. Top Single Operator Portable in each ARRL/RAC Section where significant effort or competition is evident. (Single Operator Portable entries are not eligible for single-band awards.)
7.1.4. Top rover in each ARRL Division and Canada where significant effort or competition is evident. (Rover entries are not eligible for single-band awards.)
7.1.5. Top multi-operator score in each ARRL/RAC Section where significant effort or competition is evident. (Multioperator entries are not eligible for single-band awards.) Top limited multi-operator in each ARRL/RAC Section where significant effort or competition is evident. (Limited multi-operator entries are not eligible for single-band awards.)
7.1.6. Top scoring club in each club competition category will be awarded a gavel.
See “General Rules for all ARRL Contests” for club competition information.
8. Submission:
8.1. All submissions must be emailed to SeptemberVHF@... or postmarked no later than 0300z Wednesday, October 15, 2014. Paper logs should be mailed to Sept VHF QSO Party, ARRL Contest Branch, 225 Main St, Newington, CT 06111. Logs mailed or emailed after the submission deadline may be designated as check logs.
8.2. Stations that use computers to log must send the electronic log in the Cabrillo file format for entry into the results. Submitted electronic files must be in ASCII / text readable format. A paper printout of an electronically created log is not an acceptable

substitute for the required log file.
8.3. Electronically submitted entries are considered signed.
8.4. Logs may be submitted via the special web applet.
8.5. All paper entries must include a fully completed summary sheet and a complete log of the contacts made.
9. Other:
9.1. See “General Rules for All ARRL Contests” and “General Rules for ARRL Contests on bands above 50 MHz (VHF)."
9.1.1 Questions? Contact contests@... or (860) 594-0232.

3376. IRC Hilltop Operating Event--September 27

Yahoo group: IndyHamRadio
Date: 2014-09-14 20:50:10 UTC
From: Bob Burns W9BU
Topic: 3376 Message: 3376

The 2014 Indianapolis Radio Club Hilltop Operating Event is coming up on September 27, 2014.

The Hilltop is an opportunity for amateur radio operators, primarily in Central Indiana, to contact as many stations as possible from hilltop locations using temporary stations. It's a mini-Field Day with an emphasis on Central Indiana.

The Hilltop rules have been constructed to make it fair for small and large stations alike. Whether you have the radios and antennas to compete on all the available bands and modes or just want to limit your operation to a few bands/modes, you will find yourself competing with similar stations. And, the bands and modes have been chosen so that all it takes to participate is a Technician-class license.

But, wait, Indiana doesn't have hills. Well, yes, Indiana doesn't have hills like Colorado, but there are several hilltop locations within an hour or two drive from Indianapolis that you could operate from. In past Hilltop events, stations have operated from Weed Patch Hill in Brown County State Park, Crown Hill in Crown Hill Cemetery, and that big pile of rock you can see from I-465 on the south side of Indianapolis. Though, keep in mind that if you are operating from private property, you should get permission from the property owner.

You can find the complete rules on the Indianapolis Radio Club web site at:

http://indyradioclub.org/irchilltop.html

Don't forget that you need to register your hilltop station before the event. Complete instructions are in the rules.

We hope to hear you on the air during the event!

Bob...

3377. W9DXCC DX Convention and Banquet , Schaumburg, IL 9/19 - 9/20/14 (Walk-Ins Welcome)

W9DXCC 2014 Program

Rick Roderick K5UR - Banquet Speaker
We are pleased to have as our Saturday banquet speaker Rick Roderick K5UR. Rick lives north of Little Rock, Arkansas on a 50 acre hilltop QTH. He's been a ham for over 45 years and is a Life Member of the ARRL. Rick has held numerous ARRL volunteer positions continuously for all of those 45 plus years. He has been on the ARRL Board of Directors for 22 years and currently serves as First Vice President. He has served on all standing committees of the ARRL Board of Directors and on numerous other committees and task forces of the Board. He also served on the DX Advisory Committee and was chairman for many years. He was instrumental in the creation and implementation of Logbook of the World and the DXCC Challenge Award. Rick has earned numerous HF and VHF/UHF operating and achievement awards. He is an avid DXer with 370 countries worked, including 318 countries on 160 meters, 351 countries on 80 meters, 353 countries on 40 meters. He holds DXCC on 10 bands and is #7 in the world on the DXCC Challenge Award. Rick holds over 20 different Worked All Zones Awards, and was one of the first to achieve WAZ on 160 meters. On VHF/UHF, he holds many records, including the world distance record for QSO's on 2 meters meteor scatter and 222 MHz tropo. He was one of the first to work all continental 48 states on 2 meters without the use of moonbounce, 47 states in one year. Rick is #2 in the world on 6 meters VUCC and #1 in the world on VUCC for 2 meters, 222 MHz, 432 MHz, and 1296 MHz for non-EME, and received the Fred Fish Memorial Award #3 for having worked all grid squares in the United States on 6 meters.

FT5ZM - Amsterdam Island
A team of 14 operators representing 7 countries activatedFT5ZM in January 2014 andmade nearly 165,000 QSOs. Amsterdam Island was #4 on the list of most-wanted entities

world-wide. Ralph Fedor KØIR will share their experience with us. Also on the FT5ZM team were Craig Thompson K9CT and Jerry Rosalius WB9Z, well-known to W9DXCC attendees. You can read about their adventures on the FT5ZM website.

Topband DXpedition Operations - FT5ZM vs K9W Wake Island
Craig Thompson K9CT will compare the 160 meter operations from the DXpeditions to FT5ZM and K9W. Craig was at FT5ZM, and on the K9W team that made over 70,000 QSOs from Wake Island in November 2013. Other 'locals' at K9W were Ralph K9ZO, Jerry WB9Z, and Mike K9NW, with Val NV9L as Chief Pilot Relay. Over 100,000 QSOs were made, and the group honored the "Forgotten 98", a group of civilian contractors who lost their lives on Wake Island on October 7, 1943 during World War II. For more details, visit the K9Wwebsite.

DXpeditions and 21st Century Dynamics - K4UEE
Bob Allphin K4UEE knows what it takes financially to support a major DXpedition. Bob was at FT5ZM, and has now participated in, led, or co-led DXpeditions to all of the DXCC top 10 most-wanted. Bob has been on ten major DXpeditions that have made over a million QSOs, and has nine "DXpedition of the Year" plaques hanging on his wall. Bob is an active contester, participating in 38 contest DXpeditions. A member of the CQ DX Hall of Fame, current Chairman of INDEXA, current President of The KP1-5 Project, and former Chairman of the ARRL DX Advisory Committee, Bob is also a member of the VooDoo Contest Group, First Class Operator Club, A-1 Operators Club, and the Southeastern DX Club Hall of Fame.

DXpeditions for the Rest of Us - WI9WI
Jim Fitzpatrick WI9WI was first licensed 1958 at age 13 and became WI9WI in 1996. Jim's main interest in radio is contesting. He enjoys operating from DX locations, both on mini "suitcase" DXpeditions as well as from PJ2T and J7. Those are nice escapes from Wisconsin winter. Jim also operates mobile in state QSO parties, when he's not bicycling, playing ice hockey, camping or fishing.

Cycle 24 Update, FT5ZM Skewed Paths, Maunder Minimum & More

Our favorite propagation and solar cycle guruCarl Luetzelschwab K9LA will update us on the current progress of Cycle 24, with some observations on skewed paths to FT5ZM.
Is the double peak over? Will conditions be as good this Fall as they have been the past few years? Are we about to embark on another Maunder Minimum? Carl will share the latest thinking on what happens next.
(Click on the image at left to see the latest NASA prediction).
Carl has been licensed since 1961, and his interest in propagation goes back to his college days at Purdue. His website contains selected articles about propagation from his monthly propagation contributions to various ham publications. He and XYL Vicky, AA9YL, have operated from numerous DX locations, and have been dedicated QSL checkers at W9DXCC for many years.

ARRL Roundtable Discussion
Featuring:
* ARRL First VP - Rick Roderick K5UR
* Central Division Director - Dick Isely W9GIG
* Central Division Vice Director - Kermit Carlson W9XA
* DX Advisory Committee - Jim O'Connell W9WU

State-of-the-art Audio/Visual equipment for the W9DXCC program provided by Ron Steinberg K9IKZ of Rent Com. Thank you Ron!

http://www.w9dxcc.com/schedule.html

Schedule of Events
(Tentative)
Friday September 19
8:30 AM - DX University Registration/Introduction
9:00 AM - 5:00 PM - DX University In Session
7:30 PM - Reception
10:00 PM - Hospitality Suite

Saturday September 20
8:00 AM - Registration Open
9:00 AM - Program Begins
12:00 PM - Lunch
1:00 PM - Program Resumes
4:45 PM - Raffle Prize Drawing
5:00 PM - CW Copying Contest
5:30 PM - Reception
6:30 PM - Banquet and Grand Prize Drawing
10:00 PM - Hospitality Suite

http://www.w9dxcc.com/registration.html

Registration & Ticket Orders
DX University
DX University will be in session from 9am to 5pm Friday Sept. 19. Attendees will receive a pizza lunch and a thumb drive with the day's presentations. Registration fee is $30.
Convention ONLY
Includes admission to the convention, which runs from 9am to 5pm Saturday Sept. 20, all the forums, vendor displays and door prize registration. Registration fee is $45.
>
Convention AND Banquet
Includes admission to the Saturday convention, all the forums, vendor displays and door prize registration, AND the Saturday night banquet. Registration fee is dependent upon meal choice:
Banquet Choices
(All banquet choices include salad and dessert)
>Chicken - Herb Roasted Half of Chicken, with sour cream & chive mashed potatoes, broccolini, stuffed tomato, porcini gravy. Convention and Chicken banquet choice is $90.
>Pot Roast - Yankee Style Beef Pot Roast, with sour cream & chive mashed potatoes, roasted mirepoix, mushrooms, jus lie. Convention and Pot Roast banquet choice is $90.
>Salmon - Salmon with sour cream & chive mashed potatoes, broccolini, stuffed tomato.Convention and Salmon banquet choice is $90.
>Beef Tenderloin - Roasted Tenderloin of Beef, with sour cream & chive mashed potatoes, broccolini, stuffed tomato. Convention and Beef Tenderloin banquet choice is $100.
>Guest Banquet Registration
>Banquet tickets are not sold separately - guest banquet tickets are available only for Convention attendees.
>Banquet Guest prices:
>Chicken - $45.00
>Pot Roast - $45.00
>Salmon - $45.00

>Beef Tenderloin - $55.00
Raffle Tickets for DXpedition Funding
Raffle tickets to assist NCDXF DXpedition funding may be purchased in advance for $5.00 each Raffle tickets may also be purchased at W9DXCC.

To Order

To place your order via Paypal: http://www.w9dxcc.com/paypal-registration-2014.html
If purchasing by check or money order:
http://www.w9dxcc.com/_pdf/W9DXCC%202014%20Registration.pdf to download the registration order form.
Purchases by check or money order should be made payable to W9DXCC, and mailed to:

W9DXCC
545 Happ Rd
Northfield, IL 60093

You will receive a payment confirmation by email, and your ticket will be held for pickup at the registration counter at the convention site.
Register Now! We look forward to seeing you at W9DXCC!

Rules for 2014 VHF Fall Sprint Contests

by NT4RT May 29, 2014

1.0 Contest Purpose: Encourage weak signal VHF/UHF amateur radio operation & have fun.

2.0 Contest Time and Date:

1. 50MHz: 2300Z Saturday, Aug 9, 2014 to 0300Z Sunday, August 10, 2014.

2. 144MHz: 7PM to 11PM local time on Monday, September 22, 2014.

3. 220MHz: 7PM to 11PM local time on Tuesday, September 30, 2014.

4. 432MHz: 7PM to 11PM local time on Wednesday, October 8, 2014.

5. Microwave 902MHz and up: 6AM to 1PM local time on Saturday, October 18, 2014.

3.0 Classes: Stations will be classified as either Single Op or Rover. A portable or mobile

station that operates from only one grid is considered a Single Op station. A Rover must operate

from at least 2 grid squares.

3.1 Power: Power output used for contacts is for informational purposes only. Power output will

not be used to separate contestants into different groups or categories. You may want to place

your station information such as rig, output power, antenna etc. in the notes section of your entry.

That being said, the following are the suggested power levels for the HP, LP and QRP groupings

on the 3830 web site.

a. QRP: up to 5 watts PEP. (any band)

b. Low Power: up to 200 watts PEP. (any band)

c. High Power: up to 1500 watts PEP. (any band)

4.0 Exchange: Maidenhead Grid Square. Microwave contest exchange must be the full 6

character grid.

5.0 Reporting: Score will be entered on the 3830 web page in the form provided for the

particular sprint. The web page is http://www.3830scores.com/ .

Alternatively, you can postal mail or email a complete log to the contest chairman in place of a

3830 entry. A 3830 entry is preferred. Email attachment must be an ASCII text file. (.txt or .log

file, Cabrillo format is preferred.)

Your grid square goes in the web site box for "QTH". Microwave use 6 digit grid. Rovers use

the first grid activated as QTH.

Winning entries will supply a log for review by the sprint chairman to make score official. The

Log can be a mailed paper log or emailed as an attached text file in an ARRL recognized format.

ARRL log sheets are the preferred paper format.

Fall Sprint Chairman: Bruce Randall NT4RT

928 Falls Rd

Rock Hill, SC 29730

NT4RT@...

The results must be posted on the 3830 web page within 14 days of the event. Paper logs may be

mailed to the Sprint Chairman for this event. Mailed logs must be post marked within 14 days of

the event. The Sprint Chairman will post the results from a paper log on the 3830 web page.

5.1 Scoring: 50, 144, 222 and 432MHz , 1 point per QSO on any band. Multiplier would be the

total number of grid squares worked for that specific band/Sprint.

Final score: Multiply QSO points by the multipliers. Each Sprint is scored separately. Distance

based total kilometers worked would be an optional entry for information only. (Distances are

not very accurate from 4 digit grids)

5.2 Rover Scoring: 50, 144, 222 and 432MHz , 1 point per QSO on any band. Multiplier

would be the total number of grid squares worked for that specific band/Sprint.

If the rover moves to a new grid, then works a station again, a new contact is made for both

stations. The new grid will be a new multiplier if the grid was not worked before.

Rover in EM73 works EM84 as a multiplier

Rover in EM74 works EM84 as a new multiplier

When you move to a new grid, you start over on additional new multipliers.

Final score: Multiply QSO points by the multipliers. Each Sprint is scored separately. Distance

based total kilometers worked would be an optional entry for information only.

5.3 Microwave Scoring: For Microwave, 902 MHz and above use the sum of the distance of

all contacts in kilometers. A station worked on a new band is a new contact. If a rover moves to

a new grid (4 digit) he/she can be worked again for another contact.

The 6 digit grid square exchange is required for accurate distance calculation.

5.4 Microwave Rover Scoring: Scored like Single Op Microwave, except stations can be

contacted again for score after moving to a new grid. Grids activated is not used directly for

scoring and is not reported on 3830 web site.

5.5 The contest scoring is intended to be done mostly on the "Honor System". But, after the

submission period has expired, 14 days after that particular operating event, the Sprints

Committee or Chairman for that particular event will review the top 3 submissions to validate accuracy of the submission. And, the Sprints

Committee or Chairman reserves the right to

request to review the actual contest log for any entrant for review if required.

6.0 Rover Operation: A rover must be a portable or mobile station that makes contacts from at

least two different Grid Squares. For all sprints, including microwave the rover must move to a

new 4 digit Grid Square.

7.0 Assistance: Use of telephone, packet or internet methods to schedule contacts during the

contest is acceptable. The telephone, packet or internet channel will not be used while the

contact is in progress. No "OK I am hearing you now" over the another communications

channel. The alternate channel will not be available in any way to the operator during the

contact. The complete exchange of call signs and grids must be accomplished on the relevant

amateur radio band. The preferred scheduling method is on an amateur frequency such as

144.250MHz or 432.090MHz.

See following for 3830 site information. Underline identifies a user entry box.

3379. IRC Hilltop Operating Event

Yahoo group: IndyHamRadio
Date: 2014-09-21 20:03:16 UTC
From: Bob Burns W9BU
Topic: 3379 Message: 3379

From the Hilltop Operating Event Coordinator, Bob Burns, W9BU:

The 2014 Indianapolis Radio Club Hilltop Operating Event is coming up on September 27, 2014.

The Hilltop is an opportunity for amateur radio operators, primarily in Central Indiana, to contact as many stations as possible from hilltop locations using temporary stations. It's a mini-Field Day with an emphasis on Central Indiana.

The Hilltop rules have been constructed to make it fair for small and large stations alike. Whether you have the radios and antennas to compete on all the available bands and modes or just want to limit your operation to a few bands/modes, you will find yourself competing with similar stations. And, the bands and modes have been chosen so that all it takes to participate is a Technician-class license.

But, wait, Indiana doesn't have hills. Well, yes, Indiana doesn't have hills like Colorado, but there are several hilltop locations within an hour or two drive from Indianapolis that you could operate from. In past Hilltop events, stations have operated from Weed Patch Hill in Brown County State Park, Crown Hill in Crown Hill Cemetery, and that big pile of rock you can see from I-465 on the south side of Indianapolis. Though, keep in mind that if you are operating from private property, you should get permission from the property owner.

You can find the complete rules on the Indianapolis Radio Club web site at:

http://indyradioclub.org/irchilltop.html

Don't forget that you need to register your hilltop station before the event. Complete instructions are in the rules.

We hope to hear you on the air during the event!

3380. Fall Sprint Contests Dates & Rules

Rules for 2014 VHF Fall Sprint Contests
by NT4RT May 29, 2014

1.0 Contest Purpose: Encourage weak signal VHF/UHF amateur radio operation & have fun.

2.0 Contest Time and Date:
1. 50MHz: 2300Z Saturday, Aug 9, 2014 to 0300Z Sunday, August 10, 2014.
2. 144MHz: 7PM to 11PM local time on Monday, September 22, 2014.
3. 220MHz: 7PM to 11PM local time on Tuesday, September 30, 2014.
4. 432MHz: 7PM to 11PM local time on Wednesday, October 8, 2014.
5. Microwave 902MHz and up: 6AM to 1PM local time on Saturday, October 18, 2014.

3.0 Classes: Stations will be classified as either Single Op or Rover. A portable or mobile station that operates from only one grid is considered a Single Op station. A Rover must operate
from at least 2 grid squares.
3.1 Power: Power output used for contacts is for informational purposes only. Power output will
not be used to separate contestants into different groups or categories. You may want to place
your station information such as rig, output power, antenna etc. in the notes section of your entry.
That being said, the following are the suggested power levels for the HP, LP and QRP groupings
on the 3830 web site.
a. QRP: up to 5 watts PEP. (any band)
b. Low Power: up to 200 watts PEP. (any band)
c. High Power: up to 1500 watts PEP. (any band)

4.0 Exchange: Maidenhead Grid Square. Microwave contest exchange must be the full 6 character grid.

5.0 Reporting: Score will be entered on the 3830 web page in the form provided for the particular sprint. The web page is http://www.3830scores.com/ .
Alternatively, you can postal mail or email a complete log to the contest chairman in place of a
3830 entry. A 3830 entry is preferred. Email attachment must be an ASCII text file. (.txt or .log
file, Cabrillo format is preferred.)
Your grid square goes in the web site box for “QTH”. Microwave use 6 digit grid. Rovers use the first grid activated as QTH.
Winning entries will supply a log for review by the sprint chairman to make score official. The
Log can be a mailed paper log or emailed as an attached text file in an ARRL recognized format.

ARRL log sheets are the preferred paper format.
Fall Sprint Chairman:
Bruce Randall NT4RT
928 Falls Rd
Rock Hill, SC 29730
NT4RT@...
The results must be posted on the 3830 web page within 14 days of the event. Paper logs may be
mailed to the Sprint Chairman for this event. Mailed logs must be post marked within 14 days of
the event. The Sprint Chairman will post the results from a paper log on the 3830 web page.

5.1 Scoring: 50, 144, 222 and 432MHz , 1 point per QSO on any band. Multiplier would be the total number of grid squares worked for that specific band/Sprint.
Final score: Multiply QSO points by the multipliers. Each Sprint is scored separately. Distance
based total kilometers worked would be an optional entry for information only. (Distances are
not very accurate from 4 digit grids)

5.2 Rover Scoring: 50, 144, 222 and 432MHz , 1 point per QSO on any band. Multiplier would be the total number of grid squares worked for that specific band/Sprint.
If the rover moves to a new grid, then works a station again, a new contact is made for both
stations. The new grid will be a new multiplier if the grid was not worked before.
Rover in EM73 works EM84 as a multiplier
Rover in EM74 works EM84 as a new multiplier
When you move to a new grid, you start over on additional new multipliers.
Final score: Multiply QSO points by the multipliers. Each Sprint is scored separately. Distance
based total kilometers worked would be an optional entry for information only.

5.3 Microwave Scoring: For Microwave, 902 MHz and above use the sum of the distance of all contacts in kilometers. A station worked on a new band is a new contact. If a rover moves to
a new grid (4 digit) he/she can be worked again for another contact.
The 6 digit grid square exchange is required for accurate distance calculation.

5.4 Microwave Rover Scoring: Scored like Single Op Microwave, except stations can be contacted again for score after moving to a new grid. Grids activated is not used directly for
scoring and is not reported on 3830 web site.

5.5 The contest scoring is intended to be done mostly on the "Honor System". But, after the submission period has expired, 14 days after that particular operating event, the Sprints Committee or Chairman for that particular event will review the top 3 submissions to validate
accuracy of the submission. And, the Sprints Committee or Chairman reserves the right to request to review the actual contest log for any entrant for review if required.

6.0 Rover Operation: A rover must be a portable or mobile station that makes contacts from at

least two different Grid Squares. For all sprints, including microwave the rover must move to a
new 4 digit Grid Square.

7.0 Assistance: Use of telephone, packet or internet methods to schedule contacts during the
contest is acceptable. The telephone, packet or internet channel will not be used while the contact is in progress. No “OK I am hearing you now” over the another communications channel. The alternate channel will not be available in any way to the operator during the contact. The complete exchange of call signs and grids must be accomplished on the relevant amateur radio band. The ARRL Foundation is currently accepting applications from eligible radio amateurs pursuing higher education. More than 80 scholarships ranging from $500 to $5,000 will be awarded in 2015. Applications must be received between midnight, October 1, 2014 and 11:59PM Eastern Standard Time January 31, 2015. Transcripts must be received by February 13, 2015.

The Indianapolis Amateur Radio Association, operator of the Indianapolis Hamfest, sponsors a $1000 scholarship awarded to a licensed amateur pursuing a course of study in Electrical or Electronics Engineering, Computer Science, or related fields. Preference is given to applicants living in Indiana or the ARRL Central Division. The 2014 scholarship was awarded to James R. Lithgow, KC9LXT of Schaumburg, IL.

3387. Hello all!

Yahoo group: IndyHamRadio
Date: 2014-12-29 23:53:03 UTC
From: elevatorguy@...
Topic: 3387 Message: 3387

Just wanted to say hello to the group, I am trying to get a pulse on Ham radio after taking a 20 year break.
I dusted off the HT and the mobiles, antiques now I suspect, and will be putting antennas back up soon.
A lot has changed! looking forward to talking to and meeting some new folks.

Boy Scout Radio Room Open House (??)

Thu Jan 8, 2015 6:44 am (PST) . Posted by:

"Greg Hicks" grizhicks
 All/Anyone -- Recall a recent FB posted that listed an open house for the radio room at
the Boy Scout Center. Anyone know anything about that? and when is it?
Thanks, Greg

Hi, Greg:

Randy, KA7BSA, would likely be able to respond to this inquiry. I have copied him on this email.

Hi Greg and Gavin,

I think I've found the announcement you're looking for. You might also be interested in Friday's Indianapolis Radio Club meeting, which will feature a presentation on "Amateur Radio and Scouting."

Both announcements follow this message.

73,
Brian, W9IND

http://www.nightlinx.com/events/eventdetail.php?event_id=319519888239139

WD9BSA BSA Crew OPEN HOUSE
Feb 28, 2015
11:50 AM
Belzer Scout Camp
6102 Boy Scout Rd
Indianapolis, IN, 46226

Promoter: Tom O'Nan

We are inviting all BSA Venture Crew aged youth who have an interest in amateur radio to visit and hopefully join up with this new Crew. Youth need to be between the ages of 14 and 21 to join. Amateurs coming can use the 443.000- (pl 100) as a talk in repeater and 147.420 simplex at the camp. All Venture age scouts are welcome and all Amateur Radio Scouters are welcome to attend (and be recruited :)

==========

To all interested in Amateur Radio and related areas: Don't miss the next

meeting of the Indianapolis Radio Club, this coming Friday, January 9, at
7:30 pm. There will be an informal social time prior to the meeting,
starting around 7:00.

The meeting will be held in Room 101-2 of the IFC building of IVYTech at
2535 N. Capitol Ave. Point your browser to
http://www.ivytech.edu/shared/shared_hcompwg/maps/ivytech-NMC-campus13.pdf

for a map.

This month's meeting will feature a presentation on "Amateur Radio and
Scouting", presented by John Deegan, K9XT.

Hope to see you at the meeting!

73,
Ken
KJ9B

3391. Laurel VEC testing Session

Yahoo group: IndyHamRadio
Date: 2015-01-09 23:06:15 UTC
From: Brian
Topic: 3391 Message: 3391

The next Laurel VEC testing session, held by the WD9BSA group will be at the Scout Office on February 14th at 9AM.

The Laurel VEC does not charge to sit for exams.

If you are interested in testing, please go to http://wd9basa.org and click on the Licensing Tab and fill out the registration form.

Seating is limited so be sure to register, it's the only way guarantee getting a seat.

Testing Location:

Golden-Burke Scout Center
7125 Fall Creek Road North
Indianapolis, IN 46256

All the details on what to bring and what to expect are on the website.

http://wd9bsa.org

Is it normal for the IRC to award scholarship money to out of state hams?
Not trying to start any debate, just asking.

Thanks

Brian, for clarification, this is sponsored by the Indianapolis Amateur Radio Association, not the Indianapolis Radio Club, if that's the IRC you're refering to. Just an FYI.

Contest Details
January VHF Rules (Download PDF)
*updated 01/09/2015*1. Objective: To work as many amateur stations in as many different 2 degrees x 1 degree grid squares as possible using authorized frequencies above 50 MHz. Foreign stations work W/VE amateurs only.2. Date and Contest Period: The date will be announced annually by the ARRL but will generally be the third or fourth weekend in January. Begins 1900 UTC Saturday, ends 0359 UTC Monday (January 24-26, 2015).3. Entry Categories:3.1. Single Operator (spotting assistance is NOT permitted)3.1.1. High Power (1500 W PEP or maximum power allowed by your Amateur license, whichever is less)3.1.2. Low Power (200 W PEP on 50/144 MHz; 100 W PEP on 222/432 MHz; 50 W PEP on 902 MHz and higher)3.1.3. Portable (10 W PEP or less, portable power source, portable antennas,cannot set up at a permanent station location)3.1.4. 3-Band (6m, 2m & 432 MHz only; 100 W or less on 6m/2m, 50 W or less on 432 MHz.)3.1.5. FM Only (6m-446 MHz, 100 W or less on all bands)3.2. Single Operator Unlimited (spotting assistance is permitted)3.2.1. High Power (1500 W PEP or maximum power allowed by your Amateur license, whichever is less)3.2.2. Low Power (200 W PEP on 50/144 MHz; 100 W PEP on 222/432 MHz; 50 W PEP on 902 MHz and higher)3.2.3. Portable (10 W PEP or less, portable power source, portable antennas,cannot set up at a permanent station location)3.2.4. Spotting assistance is not permitted for Single Operator 3-Band or FM-Only. Operators using assistance in these sub-categories will be reclassified as Single Operator Unlimited Low Power.3.3. Rover3.3.1. Rover A rover is comprised of no more than two operators that moves among two or more grid squares during

the course of a contest. An operator may perform any or all rover functions, but a driver's function shall be limited to driving the vehicle. Drivers may be switched out during the event. Any number of observers is also allowed, however observers may not perform any rover function at any time. Rover vehicles with only one occupant are allowed to perform all functions listed above.3.3.1.1. A rover vehicle may transport only one station using a single call sign. An exception is provided for in "General Rules for All ARRL Contests" number 3.5 (Family Rule).3.3.1.2. Rover vehicles must transport all the equipment, power supplies, and antennas used at each operating site.3.3.1.3. Rovers MUST sign "rover" on Phone and /R on CW and digital modes after their call sign.3.3.1.4. All Rovers are encouraged to adopt operating practices that allow as many stations as possible to contact them.3.3.1.5. Rover operators may submit separate logs for single operator (fixed station) in addition to their rover entries. Rovers submitting a score for inclusion in a club competition must also include a secondary summary sheet indicating the portion of the score that counts for the club score if any of the QSOs submitted take place outside of their club's territory.3.3.1.6. Rovers are permitted to use APRS. Rovers using APRS transmit only their call sign and position. Any multi-op or single-op unlimited station may access rover APRS data directly or via the Internet.3.3.1.7 Rovers are not permitted to use assistance. Any Rovers using assistance will be re-categorized as an Unlimited Rover.3.3.1.8. A rover may not make more than 100 QSOs with any other one rover.3.3.2. Limited Rover (1 or 2 operators, 6m - 432 MHz only; 200 W PEP or less on6m/2m, 100 W PEP or less on 222/432 MHz.)3.3.2.1. Limited Rovers are not permited to use assistance. Any Limited Rovers using assistance will be re-categorized as an Unlimited Rover.3.3.3. Unlimited Rover (all bands above 50 MHz, 1500 W PEP or maximumpower allowed by your Amateur license, whichever is less, but may use more than two operators and are exempt from rules 3.3.1.2 and 3.3.1.8.)3.3.3.1. Unlimited Rover scores may NOT be applied to a club score for Club Competition.3.4. Multioperator (spotting assistance is permitted.)3.4.1. Multioperator (1500 W PEP or maximum power allowed by your Amateur license, whichever is less)3.4.2. Limited Multioperator (Limited to any 4 bands above 50 MHz, 1500 W PEP or maximum power allowed by your Amateur license, whichever is less)4. Exchange:4.1. Maidenhead grid-square locator (see www.arrl.org/grid-squares)4.2. Exchange of signal report is optional.5. Scoring5.1. QSO points:5.1.1. Count one point for each complete 50- or 144-MHz QSO.5.1.2. Count two points for each 222- or 432-MHz QSO.5.1.3. Count four points for each 902- or 1296-MHz QSO.5.1.4. Count eight points for each 2.3 GHz (or higher) QSO.5.2. Multiplier: The total number of different grid squares worked per band. Each grid square counts as one multiplier on each band it is worked.5.3. Final score: Multiply the total number of QSO points from all bands operated by the total number of multipliers for final score.5.4. Rovers only: The final score consists of the total number of QSO points from all bands times the sum of unique multipliers (grid squares) worked per band (regardless of which grid square they were made in) plus one additional multiplier for every grid square from which they successfully completed a contact.5.4.1. Rovers are listed in the contest score listings under the Division from whichthe most QSOs were made.6. Reporting:6.1. Email electronic Cabrillo-formatted logs to JanuaryVHF@...; hand-written paper logs or diskettes should be mailed to ARRL January VHF Contest, 225 Main St, Newington, CT 06111.6.2. Entries that have been electronically generated must submit their log file in the Cabrillo file format. Paper printouts of electronic files are not acceptable substitutes. Logs created with word processing or spreadsheet software are considered electronic logs and must be submitted in Cabrillo format.6.3. Entries must be emailed or postmarked no later than 0359 UTC Wednesday, February 25, 2015.6.4. Entries may be submitted using the web applet. 6.5. Rovers who submit scores for the club competition must submit a second summary sheet indicating QSOs and score if they make any contacts from outside of the

club territory. Indicate clearly on the summary sheet and in log if the log is the total entry or that portion to be counted for the club score.7. Miscellaneous:7.1. Stations may be worked for credit only once per band from any given grid square, regardless of mode. This does not prohibit working a Rover station from more than one grid square with the same call sign.7.2. All stations may have only one signal per band (6, 2, 220MHz, etc) at any given time regardless of mode.7.3. Multioperator stations may not include QSOs with their own operators except on frequencies higher than 2.3 GHz. Even then, a complete, different station (transmitter, receiver and antenna) must exist for each QSO made under these conditions.8. Awards: Certificates will be awarded in the following categories:8.1. Single Operator8.1.1. Top Single Operator entrant in each ARRL/RAC Section for High and Low Power.8.1.2. Top single operator on each band (50, 144, 222, 432, 902, 1296 and 2304-and-up categories) in each ARRL/RAC Section where significant effort orcompetition is evident. (Note: Since the highest score per band will be the award winner for that band, an entrant may win a certificate with additional single-bandendorsements.) For example, if KA1RWY has the highest single-operator all-band score in the CT Section and her 50- and 222-MHz scores are higher than any other CT single operator’s, she will earn a certificate for being the single-operator Section leader and endorsements for 50 and 222 MHz.8.2. Top Single Operator, Portable entrant in each ARRL/RAC Section where significant effort or competition is evident. (Single operator portable entries are not eligible for single-band awards.)8.3.Top Single Operator, 3-Band entrant in each ARRL/RAC Section where significant effort or competition is evident.(Single Operator, 3-Band entries are not eligible for single-band awards.)8.4. Top Single Operator, FM Only entrant in each ARRL/RAC Section where significant effort or competition is evident. (Single Operator, FM Only entries are not eligible for single-band awards.)8.5. Top Single Operator Unlimited entrant in each ARRL/RAC Section for High and Low Power.8.6. Top Single Operator Unlimited, Portable entrant in each ARRL/RAC Section where significant effort or competition is evident. (Single operator unlimited portable entries are not eligible for single-band awards.)8.7. Top Rover, Limited Rover and Unlimited Rover entrant in each ARRL Division and Canada where significant effort or competition is evident. (Rover entries are not eligible for single-band awards.)8.8. Top Multioperator score in each ARRL/RAC Section where significant effort orcompetition is evident. (Multioperator entries are not eligible for single-band awards.)8.9. Top Limited Multioperator in each ARRL/RAC Section where significant effort or competition is evident. (Limited Multioperator entries are not eligible for single-band awards.)8.10. Top DX stations where significant effort or competition is evident.9. Other:9.1. See “General Rules for All ARRL Contests” and “General Rules for ARRL Contests on bands above 50 MHz (VHF)”9.2. For more information contact contests@... or (860) 594-0232.

ARRL Bulletin 4 ARLB004
From ARRL Headquarters
Newington CT January 29, 2015
To all radio amateurs

SB QST ARL ARLB004
ARLB004 FCC "Paperless" Amateur Radio License Policy Goes into
Effect on February 17

Starting February 17, the FCC no longer will routinely issue paper license documents to Amateur Radio applicants and licensees. The Commission has maintained for some time now that the official Amateur Radio license authorization is the electronic record that exists in its Universal Licensing System (ULS), although the FCC has continued to print and mail hard copy licenses. In mid-December the FCC adopted final procedures to provide access to official electronic authorizations, as it had proposed in WT Docket 14-161 as part of its "process reform" initiatives.

Under the new procedures, licensees will access their current official authorization ("Active" status only) via the ULS License Manager. The FCC will continue to provide paper license documents to all licensees who notify the Commission that they prefer to receive one. Licensees also will be able to print out an official authorization - as well as an unofficial "reference copy" - from the ULS License Manager.

"We find this electronic process will improve efficiency by simplifying access to official authorizations in ULS, shortening the time period between grant of an application and access to the official authorization, and reducing regulatory costs," the FCC Wireless Telecommunications Bureau (WTB) said. According to the WTB, the new procedures will save at least $304,000 a year, including the cost of staff resources.

In comments filed November 5, the ARRL had strongly recommended that the FCC "give serious consideration to continuing a default provision for sending an initial paper license document to new licensees in the Amateur Radio Service, along with detailed, simple

instructions for how to make the elections set forth in the notice relative to future modified or renewed licenses."

The FCC said that applicants or licensees who include a valid e-mail address under "Applicant Information" in the ULS will receive an official electronic authorization via e-mail. New license applicants who do not provide a FCC Registration Number at the examination point will receive a printed license as well as an FRN and a temporary password to access the Commission Registration System (CORES).

The ARRL and other Amateur Radio commenters also worried that unless a license document is printed on distinctive paper stock, its authenticity could be questioned in such situations as obtaining vanity call sign license plates. To address this, the FCC said the watermark "Official Copy" will be printed on each page of an official authorization that a licensee prints out from the ULS. The WTB recently stopped using distinctive paper stock to produce hard copy licenses and has been printing these on "standard, white recycled paper." The Bureau noted that the distinctive paper stock it had used was six times more expensive than the plain recycled paper it now uses.

The ULS License Manager now includes settings that allow licensees to notify the WTB that they prefer to receive official authorizations on paper. Once the final procedures go into effect designating electronic access as the default, licensees can change the ULS License Manager setting so that the Bureau will print and mail a license document. Licensees also may contact FCC Support via the web at,
http://esupport.fcc.gov/index.htm?job=contact_fcc_support , or via telephone or mail to request paper licenses.

The FCC rejected as "outside the scope of this proceeding" an ARRL argument that Section 97.23 of the Amateur Service rules be amended to replace "licensee mailing address" with other alternatives, including e-mail, for use in Commission correspondence. The rule, which requires that any licensee mailing address be in an area where the licensee has US Postal Service access, has precluded FCC issuance of location-specific call signs in such areas as Navassa Island (KP1) and some Pacific islands.

Abusing my authority as a Group Manager to send you a notice of the Dugger, Indiana Hamfest, February 28th located, where else but the Community Building in Dugger Park. Admission is only FIVE BUCKS and includes a TABLE. OMG!

Not only do you get to go to an indoor hamfest, but you also get to learn where Dugger, Indiana actually is.

73,
Don

Indiana EMA Directors and Ham Operators,

This is short notice, but the opportunity to attend a AUXCOMM class has surfaced suddenly. The class is intended for Amateur Radio operators and other emergency communication support personnel.

Please share this information with those you think may be interested.

Best regards,

Don West

Subject: Dist 10 AUXCOM **DATE CHANGE**

Due to instructor availability we have had to move the class scheduled for Feb 21-22 to the backup date Feb 28-Mar 1. The registration form has been updated to reflect the new dates, the address for the host location, and the correct pre-requisites. The Facebook event has also been updated as well.

Students need to bring copies of their NIMS certificates and their Amateur Radio License to the class to receive the class certification.

Hopefully the extra week will help us fill the class although we may lose a few people who could have made it on the original dates.

S. Anderson

3410. Fwd: New Webcast - Amateur Radio Roundtable

Yahoo group: IndyHamRadio
Date: 2015-03-03 04:10:03 UTC
From: Mark Thompson
Topic: 3410 Message: 3410

From: W5KUB Broadcast <video3.w5kub@...>
Date: Monday, March 2, 2015
Subject: New Webcast - Amateur Radio Roundtable
To: Tom Medlin <video3.w5kub@...>

You are invited to Amateur Radio Roundtable, a new series of W5KUB.com live weekly webcasts. The webcast is everyTuesday night at 8:00 PM Central Time (0200 UTC Wednesdays) at W5KUB.COM.

Amateur Radio Roundtable is an informal discussion of all aspects of ham radio with the intent of allowing viewers to watch this live webcast or be a guest via Skype or Google Hangout. A question and answer session with viewers will follow each topic.

The show covers all aspects of ham radio; such as, balloon launches, Satellite, go-kits, emergency communications, SDR, digital modes, DXing, home brewing, and much more. This week’s guests include Arnie Shatz, N6HC, a team member of many great DExpeditions; Eric William discussing SRD; and Franc Dunatov, ZL1SLO, discussing Special Event operations from New Zealand.

To watch Amateur Radio Roundtable: Go to W5KUB.com, click on Live Events and sign in with your existing User Name and Password.

During the last half of the roundtable, every viewer is invited to make a virtual appearance on the show. Guests will need a Google+ account, microphone, and camera. A link allowing you to join will be provided during the show. This part of the show is very informal; you can just pop in to say hello, or stay a while and join in on a wide range of topics. Google Hangout will allow up to 10 people at a time.

We need your help with programming. If you have a specific subject that you would like to present in a future show, send an email to tom@....

Join us for fun and interesting ham radio programming. We’ll see you on the webcast!

Tom Medlin, W5KUB

To follow our webcasts and to discuss ham radio, please join our Facebook group, https://www.facebook.com/groups/w5kub/.

You are receiving this message because you joined W5KUB.com.

| DATE/TIME | March 15, 2015 from 1800Z to 0100Z March 16 (1:00PM to 8:00PM CDT on March 15)
|
| MODES | CW and Phone. All stations may be worked once per mode on each band. Digital is counted as CW. Cannot work the same station on CW and Digital on the same band. |
| MOBILES and PORTABLES | Mobiles and portables may be worked once per mode per Wisconsin county that they operate from. Mobiles or portables may not sit on a county line. Drivers may navigate and drive – any other assistance must be considered multi-op. |
| ENTRY CATEGORIES |
- Single Operator Fixed (SOF)
- Single Operator Mobile (SOM)
- Single Operator Tech (SOT)
- Single Operator Rookie (SOR)
|
- Multi Operator Fixed (MOF)
- Multi Operator Mobile (MOM)
- Multi Operator Tech (MOT)
- Multi Xmtr/Multi Op Fixed (MMF)
- Multi Xmtr/Multi Op Mobile (MMM)
|
| ROOKIE | The rules for the Rookie category are:
- No previous WIQP entry other than in the Rookie category
- May enter this category no more than twice and entries must be in two consecutive years
- Entries may be single operator only
To indicate this category on your log submission, please select Novice or Rookie on your entry form or logging program. |

| EXCHANGE
| Wisconsin stations send County.
Non-Wisconsin stations send State or Province or Country.
|
| BANDS | All amateur bands and modes not prohibited for contesting may be used. No Repeater QSO's.
|
| Suggested frequencies |
| CW: | 1.820, 3.550, 7.050, 14.050, 21.050, 28.050 |
| Phone: | 1.870, 3.860, 7.230, 14.260, 21.350, 28.400 |

VHF:	6 meters	50.140(SSB), 52.530(FM)
	2 meters	146.550
	1.25 meters	223.520
	70 cm	446.025

Please do not use the National Calling Frequencies:
     52.525, 146.52, 223.50, 446.00, 906.50, 1294.50 |
| POWER LEVEL |
QRP	less than 5 watts	Power Mult = 2
Low	5 to 150 watts	Power Mult = 1.5
High	over 150W	Power Mult = 1

|
| MULTIPLIERS | Wisconsin Stations: The sum of Wisconsin counties (max. 72), plus US states (max. 50) plus Canadian provinces (max. 13) worked. Wisconsin may be counted as a state multiplier. DX countries worked count for QSO points but not as multipliers.

Non-Wisconsin Stations: The number of Wisconsin counties worked (max.72). Only Wisconsin stations may be worked.
|
| BONUS | Wisconsin Mobiles/Portables: Add 500 bonus points for each county that you operate from outside your home county. A minimum of 12 QSO’s per county is required to qualify. Portable location cannot be at an existing station location. |
| SCORING | Phone contacts count 1 point; CW and Digital contacts count 2 points.
- Add CW/Digital and Phone points.
- Then multiply by Power Level multiplier.
- Then multiply by your multiplier count under MULTIPLIERS.
- Finally, add your bonus points.
|
| LOG SUBMISSION | Electronic logs are preferred, but any log that is readable and complete will be accepted. To be complete, a log must contain the header information (see Entry Form) plus QSO data that includes time (UTC), call, band, mode, sent and received exchanges. Paper logs must be accompanied by an Entry Form. And, should you need it, here's in-depth information on our Cabrillo Log Format. |
| | Email to wiqp-logs@...

Regular mail to:
     Wisconsin QSO Party
     West Allis Radio Amateur Club
     P. O. Box 1072

Milwaukee, WI 53201 | We want your Log!
Logs due April 10, 2015 |
| | We are glad to accept handwritten logs, but if you logged with a computer, please submit your log by email if possible. |
| AWARDS | Awards will be presented to the following:

- *Highest Single Operator Fixed (SOF) score in Wisconsin
- *Highest Single Operator Mobile (SOM) score in Wisconsin
- *Highest overall Single Operator QRP score
- *Highest Single Operator VHF score in Wisconsin (50Mhz and above)
- 10 highest single operator scores in each entry category
- 5 highest single operator scores in QRP and VHF categories
- Highest multi-operator score in each entry category
- *Highest aggregate club score (club member stations to be located within 50 miles of the club, except for mobiles and portables)
- *Highest single operator score in the QSO Party outside Wisconsin
- Highest single operator score in each single operator category in each state/province
- All Rookie category entries

* Indicates a plaque; others are certificates. |

3413. Youth DXpedition to Wales

Yahoo group: IndyHamRadio
Date: 2015-03-10 20:24:21 UTC
From: neilrapp@...
Topic: 3413 Message: 3413

Congratulations to Ryan KD9DAB for being offered a spot on the RSGB Youth DXpedition to Wales this summer! He is one of my AP Chemistry students, and the current president of the Bloomington High School South ARC (K9SOU).

Ryan would like your help. I am passing this along from him.

73,
Neil Rapp WB9VPG
Sponsor, Bloomington High School South ARC

Hello, My name is Ryan Cutshall (KD9DAB) and I am the President of Bloomington High School South Amateur Radio Club. I have recently been offered a spot on a youth DXpedition to Wales with the Radio Society of Great Britian. A DXpedition is when radio operators go on trips to special or remote places in the world and transmit for a week. The only thing stopping me from going is the plane ticket to the UK. If you could help a young student/ham operator it would be greatly appreciated. Thank you and 73's

Press release at http://tentec.com

(April 2, 2015) RKR Designs, LLC of Longmont Colorado has announced that they have acquired the assets of Alpha Amplifier and TEN-TEC brands from RF Concepts. RKR plans to expand the product line, while continuing to service their customers that have enjoyed their products over the years.

The principals of RKR Designs are Richard Gall, Ken Long and Rich Danielson (Gall and Danielson of QSC Systems, Longmont, Colorado have been a successful contract manufacturer, for over 20 years). Ken Long, N0QO has over 20 years in the electronics and amateur radio industry. Long will be President and CEO of the new company. QSC has been building Alpha amplifiers for over 5 years. They have also been building boards for TEN-TEC since their purchase by RF Concepts last year. Mr. Long said “QSC has always been a fantastic contract manufacturer, and has the expertise and knowledge that will allow us to bring down costs, while increasing quality and reducing manufacturing times.”

When asked for comment, Michael Seedman, AA6DY said “I can’t think of a more capable group of people to take over the 45 year Alpha Amplifier/TEN-TEC legacy. Ken Long has been involved with the industry for years, and has a great feeling for products and operations. He has the manufacturing and engineering resources available to deliver quality products that our customers demand”. Mr. Seedman went on to say “Alpha and TEN-TEC have always had a warm spot in my heart, and I am thrilled that RKR Designs will be able to continue the operations of the business. I wish them the best”.

Ken, Richard and Rich have been working very close over the past several years and feel that this new relationship will benefit the company and customers moving forward. This closer relationship to the contract manufacturer will allow a more consistent process and delivery of quality products along with significant cost benefits.

RKR Designs LLC is privately held, and terms of the acquisition were not disclosed.

3417. 2015 ARRL/TAPR DCC Returns to Chicago AND TAPR at Dayton Hamvention

Reply-To: bernie@...

FOR IMMEDIATE RELEASE

(May 3, 2015) – The 63rd annual W9DXCC DX Convention and Banquet will be held September 11-12, 2015, in Schaumburg, Illinois. Sponsored by the Northern Illinois DX Association, the event is an ARRL-approved operating specialty convention. One new addition this year is a Contest University program that will join the DX University on Friday. Both tracks will have presentation for new and veteran DXers and contest operators. The daylong convention on Saturday will feature a full program of speakers, exhibits, QSL card checking, a CW pileup contest and many prizes. The Banquet on Saturday evening is a time to relax with keynote speaker Riley Hollingsworth, K4ZDH, former FCC Special Counsel for Spectrum Enforcement, as well as the DX Countdown and grand prizes. The convention is scheduled one week earlier than normal because of hotel availability. Woodfield Mall, which offers a wide array of shopping, is one traffic light south of the convention site.

Hyatt Regency Schaumburg
1800 East Golf Road
Schaumburg, Illinois 60173

DX University and Contest University – Friday

· Contesting Basics: What is radio sport? Why do it? Why should you do it? The language of contesting. Ethics.

· Types and conduct of contests: A discussion of the various types of contests, examples, contest exchanges and contest scoring.

· Hardware and software for the new contester: differences in hardware and ergonomics for contesting, antennas, logging software and on-line resources.

· RTTY contesting: How to setup for RTTY, sample exchanges, how to operate and demos.

· Low Band DXing

· DX Seminar discussion

· Antennas and transmission lines

· Portable DXing

· Daily DXing: The road to multi-band DXCC and tools to improve efficiency

(These sessions will be led by some of the best DX’ers and contest operators in the Midwest, including K9CT, K9DX, K9IR, K9EL, N9EP, W9MU, WO9S, K3WA and K9ZO.)

Main Convention – Saturday (as of now, with more being added)

· K1N Navassa Island DXpedition (W0GJ)

· Operating from Kuwait (W6RGG)

· YK9A February 2001 - What's Happened Since (AE9YL)

· Cycle 24 Update (K9LA)

· ARRL Roundtable Discussion

Registration: Go to http://w9dxcc.com/ and click Registration. Registration is open now via PayPal or download the form and send a check. Early registration ends August 1. Banquet orders must be received by Sept. 4. Click Location & Lodging for hotel reservations.

Updates: http://w9dxcc.com/ for new developments.

2015 Dayton Hamvention live webcast

May 15, 16, 17, 2015

This week: Special edition - Live webcast of world's largest amateur radio gathering
The 2015 Dayton Hamvention is held in Dayton, Ohio, USA and has been around for over 50 years. It is the largest hamfest in the world, with both inside and outside flea market vendors. Last year's attendance was approximately 25,000 with worldwide attendance. W5KUB.com has been webcasting this event for 14 years. For viewers that cannot attend in person, this virtual webcast is the next best thing to being there. During Hamvention the W5KUB.com webcast viewers will see thousands of other amateur radio operators (hams) as they visit, watch their friends wave or say hello to friends and family at home, and meet our special guests. In addition, thousands of dollars in prizes will be awarded to the W5KUB webcast viewers. All prizes are amateur radio related and have been donated by the following vendors: ABR Industries, ARRL, Associated Radio, Balun Designs, Begali, BHI, Buckmaster, CQ Communications, DX Engineering, EZHang, Gifts4Hams, GigaParts, Gold Metal Ideas, Gold Print Services, Heil Sound, HTD Software, ICOM, Kantronics, KB3IFH, LDG Electronics, Mastrant, MFJ, MicroLog, NCG, Peet Prothers, Quicksilver Radio, Ten-Tec, TG Electronics, Tigertronics, Times Microwave, etc. Prize eligibility requires a viewer to log into the chat room, listen for their name to be called, and respond in the chat room within the allotted time. Viewers must have a registered W5KUB.com account so they can be located if they win a prize. Registration is simple, takes less than a minute,

and only requires your email address, and your chosen User Name and Password. User information will not be shared beyond W5KUB.com.

Tuesday, May 12, evening. The weekly regular webcast of Amateur Radio Roundtable will not be held. Instead, there will be a live feed with videos of the W5KUB team packing for the Dayton Hamvention trip that begins Wednesday morning. Viewers can still chat in the chat room and watch some interesting videos.

Wednesday, May 13, 8:00 AM CDT (1300 UTC) the excitement begins as the W5KUB.COM webcast team begins their 500 mile drive from Collierville, Tennessee to Dayton, Ohio. This drive takes about 10 hours and will be streamed live. Viewers can communicate with the team through the chat room as they are enroute. Watch the beautiful scenery, watch other hams on the road, take rest breaks with the team, watch them maneuver through storms and construction, and maybe they will make the trip without being delayed by the highway police! Thursday, May 14th,, 9:00 AM - 5:00 PM EDT (1300 - 2100 UTC) watch the W5KUB team set up at Hamvention. There will be live feeds running on backup connections as they set up the Exede Ka Band satellite internet uplink. This satellite uplink provides the necessary bandwidth for the highest quality video and audio from the event. Watch the booth set up in the Silver Arena (SA301-SA302). Although this is a set-up day, there will be special guests visiting the booth. You never know what or who you will see! Friday, May 15, 8:00 AM EDT (1200 UTC) until 5:00 PM EDT - guests, vendor interviews and demonstrations, and prizes Saturday May 16 8:00 AM EDT (1200 UTC) until 5:00 PM EDT - guests, vendor interviews and demonstrations, prizes, and announcement of GigaParts Mid-Sweepstakes Prize at 2:00. Sunday May 27th, 8:00 AM EDT (1200 UTC) until 2:00 PM EDT - guests, vendor interviews and demonstrations, and prizes. After Hamvention ends, the webcast will continue throughout the 500 mile drive back to Collierville, TN. Prizes will be awarded, videos from the event will be show, and viewers can continue to interact with the crew or other hams. Please help spread this word to other hams by forwarding this message, posting to Facebook, and Twitter. 73, Tom Medlin, W5KUB |

I will be with the Clark County Amateur Radio Club at Gary Cavin Park in Edwardsville.

Look for W9WWI. Either 2A, or maybe 3A.

I am the VHF/UHF guru, so I will be on 6, 2, 222, and 432.

73 & have fun!

Dan

3425. RE: [IndyHamRadio] Field Day

Yahoo group: IndyHamRadio
Date: 2015-05-31 17:09:14 UTC
From: Bob Burns W9BU
Topic: 642 Message: 3425

I'm giving real thought to "roughing it" this year. <grin>

I think I'll charge up a couple of deep cycle or AGM batteries and work 1E from home. I only need to run the radios from the batteries, so the logging computer, air conditioner, refrigerator, television, water softener, hot water heater, etc., will all still be functioning like it does the rest of the year. My favorite beverages will be in the fridge and my favorite recliner will be waiting when I get tired. I can use my existing antennas so I won't have to hassle will putting up a temporary antenna (though I may restrict myself to my fan dipole just to give myself a handicap).

I'll work mostly phone (1 point each contact), though I may work some digital (2 points each). I'll qualify for the less than 150 watts multiplier since I'll be running 100 watts. I'll qualify for the emergency power bonus since I'll be on batteries. I'll originate a message to the Section Manager for 100 points. I'll check into the Indiana traffic nets to see if I can handle any traffic for 10 points each (up to 10 messages). I'll see if I can copy the W1AW bulletin on digital for 100 points. I'll see if I can get the EMA Director to stop by for another 100 points. And, I'll submit my entry via the web for another 50 points.

Yes, it may not be the "true spirit" of Field Day. Field Day is supposed to be fun as well as being a demonstration of our emergency preparedness. While I appreciate the guys who find fun in sweating in the late June heat and humidity while swatting mosquitos and eating potato salad and cold cuts that have sat in the sun for a few hours, that's not my idea of fun.

Seriously, I'll stop by my county's Field Day site for a few hours to see how they're doing and help the new guys make some HF contacts. I may even volunteer to help out on the N.I.T.E. Ride (http://indyhams.org/event/nite-navigate-indy-evening-bike-ride). But, after that, I think I'll go home and have my idea of "fun".

Bob...

3426. ARRL June VHF Contest, 1800 UTC Saturday, 6/13 - 0259 UTC Monday, 6/15/15

Yahoo group: IndyHamRadio
Date: 2015-06-13 13:34:06 UTC
From: Mark Thompson
Topic: 3426 Message: 3426

http://www.arrl.org/june-vhf

About ARRL June VHF Contest

For amateurs in the US and Canada (and their possessions) to work as many amateur stations in as many different 2 degrees x 1 degree Maidenhead grid squares as possible using authorized frequencies above 50 MHz. Stations outside the US & Canada (and their possessions) may only work stations in the US (and its posessions) and Canada.

Stations in KH0-9, KL7 & KP1-KP5, CY9 and CY0 count as W/VE stations and can be worked by DX stations for contest credit.

Overview

Dates

The second full weekend in June. Begins 1800 UTC Saturday, runs through 0259 UTC Monday (June 13-15, 2015).

Bands

All authorized frequencies above 50 MHz (6 Meters).

Log Submission Deadline

Entries must be e-mailed or postmarked no later than 0300 UTC Wednesday, July 15, 2015. Late logs may be designated as check logs only. Electronic submissions in the Cabrillo format may be e-mailed to JuneVHF@....

Contact Information

For contest information contact

contests@...

or (860) 594-0232

Awards

Awards: Certificates will be awarded in the following categories:

Single Operator.

Top Single Operator Low and High power entry in each ARRL/RAC Section.

Top Single Operator Low and High power on each band (50, 144, 222, 432, 902, 1296 and 2304-and-up categories) in each ARRL/RAC Section where significant effort or competition is evident. (Note: Since the highest score per band will be the award winner

for that band, an entrant may win a certificate with additional single-band endorsements.) For example, if W1INF has the highest Single-Operator all-band score in the CT Section and his 50- and 222-MHz scores are higher than any other CT single operator's, he will earn a certificate for being the single-operator Section leader and endorsements for 50 and 222 MHz.

Top Single-Operator Portable in each ARRL/RAC Section where significant effort or competition is evident. (Single-operator Portable entries are not eligible for single-band awards.)

Top Rover, Limited Rover and Unlimited Rover in each ARRL Division and Canada where significant effort or competition is evident. (Rover entries are not eligible for single-band awards.)

Top Multioperator score in each ARRL/RAC Section where significant effort or competition is evident. (Multioperator entries are not eligible for single-band awards.)

Top Limited Multioperator in each ARRL/RAC Section where significant effort or competition is evident. (Limited multioperator entries are not eligible for single-band awards.)

Plaques, if sponsored, will be awarded in the following categories:

Top Overall Single Operator (both High and Low Power) scorers.

Top Overall Single Operator Portable scorer.

Top Overall Rover, Limited Rover and Unlimited Rover scorers.

Top Overall Multi-Operator scorer.

Top Overall Limited Multi-Operator scorer.

The leading scorer in each entry category for each ARRL Division, Canada, and DX (non-W/VE) station.

June VHF log sheet

ARRL VHF Contest Log Sheet

June VHF summary sheet

June VHF Contest Paper Summary Sheet

Power Limits By Category

Single Operator, High Power:

1500 Watts PEP or the maximum allowable power level established by the national licensing authority of your country, whichever is lower.

Single Operator, Low Power:

50 MHz and 144 MHz--200 W PEP.

222 MHz and 432 MHz--100 W PEP.

902 MHz and above--50 W PEP (effective 2012)

Single Operator Portable:

Ten (10) W PEP output or less.

Portable power source.

Portable equipment and antennas.

Single Operator, 3 Band:

50 Mhz and 144 MHz: 100 W PEP or less.

432 MHz: 50 W PEP or less.

Single Operator, FM Only:

50 144, 222 and 446 MHz: 100 W or less.

Multioperator:

1500 Watts PEP or the maximum allowable power level established by the national licensing authority of your country, whichever is lower.

Limited Multioperator:

1500 Watts PEP or the maximum allowable power level established by the national licensing authority of your country, whichever is lower.

Rover:

1500 Watts PEP or the maximum allowable power level established by the national licensing authority of your country, whichever is lower.

Limited Rover:

50 MHz and 144 MHz--200 W PEP.

222 MHz and 432 MHz--100 W PEP.

902 MHz and above--50 W PEP. (effective 2012)

Unlimited Rover:

1500 Watts PEP or the maximum allowable power level established by the national licensing authority of your country, whichever is lower.

FAQ : 2015 VHF+ Rule Changes Allowing Assistance For All Categories

Q: What are the new rules regarding assistance in VHF+ contests?
A: Rule 1.16 was added to the General Rules For ARRL Contests Above 50MHz, which allows all entrants, regardless of category, to use spotting assistance to identify stations that

are available for contacts and to announce (self-spot) their availability for contacts. Various other rules were also amended to ensure they did not contradict rule 1.16. To ensure the visibility of the new rule, complimentary rules will be added to individual contest rules (ex. Rule 7.1 in the June VHF Contest Rules).

Q: Does this mean I can spot myself?
A: Yes. As long as your self-spot conveys only the information allowed in rule 1.16.

Q: What happened to the rule that allowed rovers to use APRS?
A: The APRS rule became redundant with the addition of rule 1.16 and was removed. Using APRS to announce your position is allowed under the new rule.

Q: Can I use Internet chat rooms, Facebook, Twitter, text messages, telephone calls, APRS, etc. to announce my frequency or to find a frequency where someone else is operating?
A: Yes. All of these methods (and more) are allowed for all operating categories as long as they are not used to "…facilitate the completion of any contact once the contact has commenced. This means such assistance may not be used to convey receipt or non-receipt of any required element of the contact or to request a repeat of any required element of a contact." In other words, announce your frequency and location, etc but once the contact begins, you may not use any non-amateur means to complete it.

Q: I was chatting with another station online (Internet) and we established a frequency to try and work each other. I'm pretty sure the contact was complete, but it was a tough copy. The other station is still online, can I confirm that they logged me without having to try and make contact via the radio again?
A: No, "…assistance may not be used to convey receipt or non-receipt of any required element of the contact or to request a repeat of any required element of a contact." You must copy all required information during the contact without using non-amateur means of communication.

Q: I'm still confused and I have questions about a specific scenario, who can I ask?
A: If you have any questions about the 2015 rule change or about the VHF+ contests in general, please contact Contest Branch Manager Matt Wilhelm, W1MSW, via email w1msw@... or (860) 594-0232.

Cabrillo Templates for the New SO3B and SOFM Categories

The 2013 June VHF Contest now includes two new categories: Single Operator, 3 Band and Single Operator, FM Only. Here are examples of Cabrillo log headers to enter the new categories.

If you are going to copy/paste these templates into your own Cabrillo log, please be sure to substitute your own station info!

Full Contest Rules

Full Contest Rules (Download PDF)

1. Objective: To work as many amateur stations in as many different 2 degrees by 1 degree grid squares as possible using authorized frequencies above 50 MHz. Foreign stations work W/VE amateurs only.

2. Date and Contest Period: The second full weekend in June. Begins 1800 UTC Saturday, ends 0300 UTC Monday (June 13-15, 2015).

3. Entry Categories:

3.1. Single Operator: One person performs all transmitting, receiving, spotting, and logging functions as well as equipment and antenna adjustments. Only one transmitted signal per band is permitted at any given time. Non-contact-producing activities as described in Rule 7.1 are not considered transmitted signals for the purpose of applying this rule.

3.1.1. Single Operator Low Power:

3.1.1.1. Power limits on any band may not exceed the following:

3.1.1.1.1. 50 MHz and 144 MHz--200 W PEP.

3.1.1.1.2. 222 MHz and 432 MHz--100 W PEP.

3.1.1.1.3. 902 MHz and above--50 W PEP.

3.1.2. Single Operator High Power: Power limits on any band exceeds the limits for the Single Operator Low power.

3.1.3. Both Single Operator High and Low Power stations compete for all-band and single-band awards.

3.1.4. Overall and single-band winners are recognized in awards offered.

3.2. Single Operator Portable:

3.2.1. Ten (10) W PEP output or less.

3.2.2. Portable power source.

3.2.3. Portable equipment and antennas.

3.2.4. Single Operator Portable stations must operate from a location other than a permanent station location.

3.2.5. Single Operator Portable stations may not change locations during the contest period outside of the original 500-meter diameter permitted circle.

3.3. Single Operator, 3-Band:

3.3.1. Restricted to 50, 144 and 432 MHz.

3.3.2. Power limits are 100 W PEP on 50 and 144 MHz, 50 W PEP on 432 MHz.

3.4. Single Operator, FM Only

3.3.1. All QSOs must be made using Frequency Modulation (FM).

3.3.2. Restricted to 50, 144, 222 and 440 MHz.

3.3.3. Power limits are 100 W on all bands.

3.5. Rover: A rover consists of no more than two operators that move among two or more grid squares during the course of a contest. An operator may perform any or all rover functions, but a driver's function shall be limited to driving the vehicle. Drivers may be switched out during the event. Any number of observers is also allowed, however observers may not perform any rover function at any time. Rover vehicles with only one occupant are allowed to perform all functions listed above.

3.5.1. A rover vehicle may transport only one station using a single call sign. An exception is provided for in "General Rules for All ARRL Contests" number 3.5 (Family Rule).

3.5.2. A rover may not operate with more than one call sign.

3.5.3. Rover vehicles must transport all the equipment, power supplies, and antennas used at each operating site.

3.5.4. Rovers MUST sign "rover" on Phone and /R on CW and digital modes after their call sign.

3.5.5. All Rovers are encouraged to adopt operating practices that allow as many stations as possible to contact them.

3.5.6. Rover operators may submit separate logs for single operator (fixed station) in addition to their rover entries. Rovers submitting a score for inclusion in a club competition must also include a secondary summary sheet indicating the portion of the score that counts for the club score if any of the QSOs submitted take place outside of their club's territory.

3.5.7. A rover may not make more than 100 QSOs with any other one rover.

3.6. Limited Rover. Same as the "Rover" class above, but competes using only the lowest four bands available for any given contest. Output power limits shall be the same as those defined for the Single Operator Low Power category (3.1.1)

3.7. Unlimited Rover. Same as “Rover” class above, but Unlimited Rovers may use more than two operators and are exempt from rules 3.5.3 and 3.5.7.

3.7.1. Unlimited Rover scores may NOT be applied to a club score for Club Competition.

3.8. Multioperator:

3.8.1.Multioperator (Unlimited): Stations submit logs with more than four bands used.

3.8.2.Limited Multioperator: Stations submit logs with a maximum of four bands used. (Logs from additional bands used, if any, should be included as checklogs.)

4. Exchange: Maidenhead grid-square locator (see www.arrl.org/grid-squares)

4.1. Exchange of signal report is optional.

5. Scoring:

5.1. QSO points:

5.1.1. Count one point for each complete 50- or 144-MHz QSO.

5.1.2. Count two points for each 222- or 432-MHz QSO.

5.1.3. Count three points for each 902- or 1296-MHz QSO.

5.1.4. Count four points for each 2.3 GHz (or higher) QSO.

5.2. Multiplier: The total number of different grid squares worked per band. Each 2 degrees by 1 degree grid square counts as one multiplier on each band it is worked.

5.3. Final score: Multiply the total number of QSO points from all bands operated by the total number of multipliers for final score.

5.4. Rovers only: The final score consists of the total number of QSO points from all bands times the sum of unique multipliers (grid squares) worked per band (regardless of which grid square they were made in) plus one additional multiplier for every grid square from which they successfully completed a contact.

5.4.1. Rovers are listed in the contest score listings under the Division from which the most QSOs were made.

6. Reporting:

6.1. Entries may be submitted as follows:

6.1.1. Electronic submissions in the Cabrillo format may be emailed to JuneVHF@...

6.1.2. Hand written paper logs or diskettes mailed to June VHF, ARRL, 225 Main St, Newington, CT 06111.

6.1.3. Web entries submitted via the web-based applet.

6.2. Entries that have been electronically generated must submit their log file in the Cabrillo file format. Paper print outs of electronic files are not acceptable substitutes.

6.3. Entries must be emailed or postmarked no later than 0300 UTC Wednesday, July 15, 2015. Late logs may be designated as checklogs only.

7. Miscellaneous:

7.1 All entrants, regardless of category, are permitted to use spotting assistance or nets including but not limited to DX-alerting nets, internet chat rooms, APRS and other packet, reverse beacon networks and repeaters to identify stations available for contacts and to announce (self-spot) their availability for contacts. Announcements shall be limited to call sign, location, band or frequency, mode and–if applicable–transmitting sequence and listening direction. These methods of spotting assistance may also be used to coordinate antenna peaking prior to initiation of the contact and to explain contest rules, such as the exchange required, for those who need clarification. Such assistance may not be used to facilitate the completion of any contact once the contact has commenced. This means such assistance may not be used to convey receipt or non-receipt of any required element of a

contact or to request a repeat of any required element of a contact.

7.2. Stations may be worked for credit only once per band from any given grid square, regardless of mode. This does not prohibit working a station from more than one grid square with the same call sign (such as a Rover).

7.3. Only one signal per band (6, 2, 11/4, etc) at any given time is permitted, regardless of mode.

7.4. Multi-operator stations may not include QSOs with their own operators except on frequencies higher than 2.3 GHz. Even then, a complete, different station (transmitter, receiver and antenna) must exist for each QSO made under these conditions.

7.5. Forms may be obtained by:

7.5.1. Downloading the form [PDF]

7.5.2. Sending an SASE with 2 units of postage to June VHF Form Request, ARRL, 225 Main St, Newington, CT 06111.

8. Awards: Certificates will be awarded in the following categories:

8.1. Single Operator

8.1.1. Top Single Operator Low and High power entry in each ARRL/RAC Section.

8.1.2. Top Single Operator Low and High power on each band (50, 144, 222, 432, 902, 1296 and 2304-and-up categories) in each ARRL/RAC Section where significant effort or competition is evident. (Note: Since the highest score per band will be the award winner for that band, an entrant may win a certificate with additional single-band endorsements.) For example, if W1INF has the highest Single-Operator all-band score in the CT Section and his 50- and 222-MHz scores are higher than any other CT single operator's, he will earn a certificate for being the single-operator Section leader and endorsements for 50 and 222 MHz.

8.2. Top Single-Operator Portable in each ARRL/RAC Section where significant effort or competition is evident. (Single-operator Portable entries are not eligible for single-band awards.)

8.3. Top Rover, Limited Rover and Unlimited Rover in each ARRL Division and Canada where significant effort or competition is evident. (Rover entries are not eligible for single-band awards.)

8.4. Top Multioperator score in each ARRL/RAC Section where significant effort or competition is evident. (Multioperator entries are not eligible for single-band awards.)

8.5. Top Limited Multioperator in each ARRL/RAC Section where significant effort or competition is evident. (Limited multioperator entries are not eligible for single-band awards.)

8.6. Plaques, if sponsored, will be awarded in the following categories:

8.6.1. Top Overall Single Operator (both High and Low Power) scorers.

8.6.2. Top Overall Single Operator Portable scorer.

8.6.3. Top Overall Rover, Limited Rover and Unlimited Rover scorers.

8.6.4. Top Overall Multi-Operator scorer.

8.6.5. Top Overall Limited Multi-Operator scorer.

8.6.6. The leading scorer in each entry category for each ARRL Division, Canada, and DX (non-W/VE) station.

9. Other:

9.1. See "General Rules for All ARRL Contests" and "General Rules for ARRL Contests on bands above 50 MHz (VHF)"

Digital 9:30 AM 10:30 AM 11:30 AM 12:30 AM 1630

W1AW will operate on its regularly published frequencies.

CW frequencies are 1.8025, 3.5815, 7.0475, 14.0475, 18.0975, 21.0675, 28.0675 and 147.555 MHz.

Digital frequencies are 3.5975, 7.095, 14.095, 18.1025, 21.095, 28.095 and 147.555 MHz.

Phone frequencies are 1.855, 3.990, 7.290, 14.290, 18.160, 21.390, 28.590 and 147.555 MHz.

W1AW will transmit the Field Day bulletin using 45.45-baud Baudot, PSK31 in BPSK mode and MFSK16.

The W1AW EchoLink conference server W1AWBDCT will also carry the W1AW Field Day bulletin in real-time during the transmissions.

The Maritime Radio Historical Society station K6KPH will transmit the W1AW Field Day 2015 bulletin for the benefit of West Coast stations on 3.5815, 7.0475, 14.0475, 18.0975 and 21.0675 MHz using CW.

K6KPH will transmit the Field Day bulletin using Baudot, FEC AMTOR, BPSK31 and MFSK16 on 7.095 and 14.095 MHz.

The K6KPH schedule is accurate as of June 22, 2015.

Any additional transmissions or changes in the schedule will be posted on the web at:

2015 ARRL/TAPR DCC (Digital Communications Conference)
DoubleTree HotelArlington Heights, IL
October 9 - 11, 2015

The Digital Communication Conference is the premiere annual Digital Conference covering all Digital Modes & Techniques including Data, Voice & Television and SDR. The DCC is for hams both experienced & also inexperienced in digital communications.
The DCC has two full days of Technical presentations on Friday & Saturday, concurrent Introductory forums on Saturday,
a Saturday night Banquet with a Guest Speaker and a Sunday morning Seminar deep dive into a technical subject.
There are also Friday & Saturday Lunches and a Friday Night Social.
The DCC was last held in Chicago in 2009 and likely won't be back in Chicago for several years so you won't want to miss it this year.
If you haven't submitted a technical paper, but want to present a Technical or Introductory presentation please contact the TAPR Office at: https://www.tapr.org/inforequest.php

The 2015 DCC will be held at the DoubleTree Hotel in the Chicago northwest suburb of Arlington Heightsnear the intersection of the I-90 Tollway and Arlington Heights Road. The hotel is also not far from O'Hare airport with a free hotel shuttle to O'Hare.
Be sure to register for the DCC and reserve your hotel room early.
The DCC Early Bird Pre-Registration Discount ends on September 19th.
DCC Registration is available at: http://www.tapr.org/dcc#registration
The DCC Hotel Special Rate ends on September 15th. DCC Hotel Information is available at: http://www.tapr.org/dcc#hotel
Look forward to your participation in the DCC.

About
For amateurs in the US and Canada (and their possessions) to work as many amateur stations in as many different 2 degrees x 1 degree Maidenhead grid squares as possible using authorized frequencies above 50 MHz. Stations outside the US & Canada (and their possessions) may only work stations in the US (and its posessions) and Canada.Stations in KH0-9, KL7 & KP1-KP5, CY9 and CY0 count as W/VE stations and can be worked by DX stations for contest credit.
Overview

- Dates-The second full weekend in June. Begins 1800 UTC Saturday, runs through 0259 UTC Monday (June 13-15, 2015).

Full Contest Rules
Full Contest Rules (Download PDF)
1. Objective: To work as many amateur stations in as many different 2 degrees by 1 degree grid squares as possible using authorized frequencies above 50 MHz. Foreign stations work W/VE amateurs only. 2. Date and Contest Period: The second full weekend in June. Begins 1800 UTC Saturday, ends 0300 UTC Monday (June 13-15, 2015).3. Entry Categories: 3.1. Single Operator: One person performs all transmitting, receiving, spotting, and logging functions as well as equipment and antenna adjustments. Only one transmitted signal per band is permitted at any given time. Non-contact-producing activities as described in Rule 7.1 are not considered transmitted signals for the purpose of applying this rule.3.1.1. Single Operator Low Power:3.1.1.1. Power limits on any band may not exceed the following:3.1.1.1.1. 50 MHz and 144 MHz--200 W PEP.3.1.1.1.2. 222 MHz and 432 MHz--100 W PEP.3.1.1.1.3. 902 MHz and above--50 W PEP.3.1.2. Single Operator High Power: Power limits on any band exceeds the limits for the Single Operator Low power.3.1.3. Both Single Operator High and Low Power stations compete for all-band and single-band awards.3.1.4. Overall and single-band winners are recognized in awards offered.3.2. Single Operator Portable:3.2.1. Ten (10) W PEP output or less.3.2.2. Portable power source.3.2.3. Portable equipment and antennas.3.2.4. Single Operator Portable stations must operate from a location other than a permanent station location.3.2.5. Single Operator Portable stations may not change locations during the contest period outside of the original

500-meter diameter permitted circle.3.3. Single Operator, 3-Band: 3.3.1. Restricted to 50, 144 and 432 MHz. 3.3.2. Power limits are 100 W PEP on 50 and 144 MHz, 50 W PEP on 432 MHz.3.4. Single Operator, FM Only 3.3.1. All QSOs must be made using Frequency Modulation (FM). 3.3.2. Restricted to 50, 144, 222 and 440 MHz. 3.3.3. Power limits are 100 W on all bands.3.5. Rover: A rover consists of no more than two operators that move among two or more grid squares during the course of a contest. An operator may perform any or all rover functions, but a driver's function shall be limited to driving the vehicle. Drivers may be switched out during the event. Any number of observers is also allowed, however observers may not perform any rover function at any time. Rover vehicles with only one occupant are allowed to perform all functions listed above.3.5.1. A rover vehicle may transport only one station using a single call sign. An exception is provided for in "General Rules for All ARRL Contests" number 3.5 (Family Rule).3.5.2. A rover may not operate with more than one call sign.3.5.3. Rover vehicles must transport all the equipment, power supplies, and antennas used at each operating site.3.5.4. Rovers MUST sign "rover" on Phone and /R on CW and digital modes after their call sign.3.5.5. All Rovers are encouraged to adopt operating practices that allow as many stations as possible to contact them.3.5.6. Rover operators may submit separate logs for single operator (fixed station) in addition to their rover entries. Rovers submitting a score for inclusion in a club competition must also include a secondary summary sheet indicating the portion of the score that counts for the club score if any of the QSOs submitted take place outside of their club's territory.3.5.7. A rover may not make more than 100 QSOs with any other one rover.3.6. Limited Rover. Same as the "Rover" class above, but competes using only the lowest four bands available for any given contest. Output power limits shall be the same as those defined for the Single Operator Low Power category (3.1.1)3.7. Unlimited Rover. Same as “Rover” class above, but Unlimited Rovers may use more than two operators and are exempt from rules 3.5.3 and 3.5.7.3.7.1. Unlimited Rover scores may NOT be applied to a club score for Club Competition.3.8. Multioperator:3.8.1.Multioperator (Unlimited): Stations submit logs with more than four bands used.3.8.2.Limited Multioperator: Stations submit logs with a maximum of four bands used. (Logs from additional bands used, if any, should be included as checklogs.)4. Exchange: Maidenhead grid-square locator (see www.arrl.org/grid-squares) 4.1. Exchange of signal report is optional.5. Scoring: 5.1. QSO points: 5.1.1. Count one point for each complete 50- or 144-MHz QSO. 5.1.2. Count two points for each 222- or 432-MHz QSO. 5.1.3. Count three points for each 902- or 1296-MHz QSO. 5.1.4. Count four points for each 2.3 GHz (or higher) QSO. 5.2. Multiplier: The total number of different grid squares worked per band. Each 2 degrees by 1 degree grid square counts as one multiplier on each band it is worked. 5.3. Final score: Multiply the total number of QSO points from all bands operated by the total number of multipliers for final score. 5.4. Rovers only: The final score consists of the total number of QSO points from all bands times the sum of unique multipliers (grid squares) worked per band (regardless of which grid square they were made in) plus one additional multiplier for every grid square from which they successfully completed a contact. 5.4.1. Rovers are listed in the contest score listings under the Division from which the most QSOs were made.6. Reporting: 6.1. Entries may be submitted as follows: 6.1.1. Electronic submissions in the Cabrillo format may be emailed to JuneVHF@arrl.org 6.1.2. Hand written paper logs or diskettes mailed to June VHF, ARRL, 225 Main St, Newington, CT 06111. 6.1.3. Web entries submitted via the web-based applet. 6.2. Entries that have been electronically generated must submit their log file in the Cabrillo file format. Paper print outs of electronic files are not acceptable substitutes. 6.3. Entries must be emailed or postmarked no later than 0300 UTC

Wednesday, July 15, 2015. Late logs may be designated as checklogs only.
7. Miscellaneous: 7.1 All entrants, regardless of category, are permitted to use spotting assistance or nets including but not limited to DX-alerting nets, internet chat rooms, APRS and other packet, reverse beacon networks and repeaters to identify stations available for contacts and to announce (self-spot) their availability for contacts. Announcements shall be limited to call sign, location, band or frequency, mode and–if applicable–transmitting sequence and listening direction. These methods of spotting assistance may also be used to coordinate antenna peaking prior to initiation of the contact and to explain contest rules, such as the exchange required, for those who need clarification. Such assistance may not be used to facilitate the completion of any contact once the contact has commenced. This means such assistance may not be used to convey receipt or non-receipt of any required element of a contact or to request a repeat of any required element of a contact. 7.2. Stations may be worked for credit only once per band from any given grid square, regardless of mode. This does not prohibit working a station from more than one grid square with the same call sign (such as a Rover). 7.3. Only one signal per band (6, 2, 11/4, etc) at any given time is permitted, regardless of mode.
7.4. Multi-operator stations may not include QSOs with their own operators except on frequencies higher than 2.3 GHz. Even then, a complete, different station (transmitter, receiver and antenna) must exist for each QSO made under these conditions. 7.5. Forms may be obtained by: 7.5.1. Downloading the form [PDF] 7.5.2. Sending an SASE with 2 units of postage to June VHF Form Request, ARRL, 225 Main St, Newington, CT 06111.
8. Awards: Certificates will be awarded in the following categories: 8.1. Single Operator 8.1.1. Top Single Operator Low and High power entry in each ARRL/RAC Section. 8.1.2. Top Single Operator Low and High power on each band (50, 144, 222, 432, 902, 1296 and 2304-and-up categories) in each ARRL/RAC Section where significant effort or competition is evident. (Note: Since the highest score per band will be the award winner for that band, an entrant may win a certificate with additional single-band endorsements.) For example, if W1INF has the highest Single-Operator all-band score in the CT Section and his 50- and 222-MHz scores are higher than any other CT single operator's, he will earn a certificate for being the single-operator Section leader and endorsements for 50 and 222 MHz. 8.2. Top Single-Operator Portable in each ARRL/RAC Section where significant effort or competition is evident. (Single-operator Portable entries are not eligible for single-band awards.) 8.3. Top Rover, Limited Rover and Unlimited Rover in each ARRL Division and Canada where significant effort or competition is evident. (Rover entries are not eligible for single-band awards.) 8.4. Top Multioperator score in each ARRL/RAC Section where significant effort or competition is evident. (Multioperator entries are not eligible for single-band awards.) 8.5. Top Limited Multioperator in each ARRL/RAC Section where significant effort or competition is evident. (Limited multioperator entries are not eligible for single-band awards.)
8.6. Plaques, if sponsored, will be awarded in the following categories:
8.6.1. Top Overall Single Operator (both High and Low Power) scorers.
8.6.2. Top Overall Single Operator Portable scorer. 8.6.3. Top Overall Rover, Limited Rover and Unlimited Rover scorers. 8.6.4. Top Overall Multi-Operator scorer. 8.6.5. Top Overall Limited Multi-Operator scorer. 8.6.6. The leading scorer in each entry category for each ARRL Division, Canada, and DX (non-W/VE) station.9. Other: 9.1. See "General Rules for All ARRL Contests" and "General Rules for ARRL Contests on bands above 50 MHz (VHF)"

3432. Introduction to New FSQ (Fast Simple QSO) Digital Chat Mode at ARRL/TAPR DCC (Digital Communications Conference) in Chicago

Warren, KC9IL will be presenting an Introduction to FSQ at the ARRL/TAPR DCC (Digital Communications Conference).

The new FSQ (Fast Simple QSO) Digital Chat Mode was featured in September 2015 QST on pages 34 - 39. The creator of FSQ, Murray, ZL1BPU was recently interviewed for the RAIN Report by Hap Holly, KC9RP and is available
at: http://www.therainreport.com/rainreport_archive/rainreport-9-12-2015.mp3
The DCC will be held on October 9 - 11 at the DoubleTree Hotel in Arlington Heights, a northwest suburb of Chicago close to O'hare airport & the I-90 Tollway.
The DCC has two full days of Technical forums on Friday & Saturday, concurrent Introductory forums on Saturday, a Saturday night Banquet with speaker, Ward Silver, N0AX, ARRL Author & Editor & a prize drawing and a Sunday morning Seminar technical deep dive. The current DCC Speaker Schedule & more DCC Information is available at: www.tapr.org/dcc
DCC Registration is at: https://www.tapr.org/dccregistration.php

KENWOOD DSTAR HT TRIBANDER
Sat Nov 7, 2015 4:28 pm   (PST)   . Posted by:
"Kent Hufford"   kq4kk

I talked to the Kenwood rep and AA4RC at the Stone Mountain GA hamfestTODAY.

Also announced during the DSTAR Forum. Nothing on the internet as far as I
know.

It is a HT, a cross between the TH6 and TH72.

It will do DSTAR, FM and APRS, has a GPS built in like the TH72.

Tri band, 2m, 440 and 220.

Kenwood should release more info around Thanksgiving. Comes out in March 2016.

That's all I know.

Kent

KQ4KK

Prices have dropped on ICOM DSTAR capable transceivers.

51A+ $360 - A GREAT buy for such a capable HT. Color, Anniversary Editions are much more. The + is the current one.

880 $400 - Price went up a little

5100 $600 - Good buy for all the capability

7100 $1000 - FIRST time at below 1K ($999.95) 1/3 less than when they came out

9100 $2500 - Not so much a drop

FLEX 6300 w/DV3000 card $2630 Unless you want to work Satellites at 100 watts SSB, the FLEX is a better buy.

FLEX RADIO with their SDR software update 1.51 fully supports DSTAR with the use of a DV3000 USB drive plugged into a 6000 series FLEX radio. Now to do DSTAR on a FLEX, you just click on the mode DSTAR, just like USB, LSB, AM, CW, etc. Works great, the waterfall display really helps finding spots on DSTAR HF. WE now have two major radio manufacturers supporting DSTAR.

3439. ARRL Names New CEO

Yahoo group: IndyHamRadio
Date: 2016-01-27 06:04:58 UTC
From: Mark Thompson
Topic: 3439 Message: 3439

http://www.arrl.org/news/tom-gallagher-ny2rf-will-succeed-david-sumner-k1zz-as-arrl-ceo

Tom Gallagher, NY2RF, Will Succeed David Sumner, K1ZZ as ARRL CEO
01/26/2016
Tom Gallagher, NY2RF, of West Palm Beach, Florida, will succeed David Sumner, K1ZZ, as the chief executive officer of ARRL, effective April 18. In that role, he will oversee all activities at ARRL Headquarters in Newington, Connecticut. Meeting in a special webinar session on January 25, all 15 ARRL Directors voted to elect Gallagher as CEO and Secretary, positions that Sumner will relinquish on April 18. Gallagher will join the ARRL staff as CEO-Elect on February 29, and a transition period will follow.
“I am excited by the prospects of ARRL’s Second Century, but I am equally mindful of Dave Sumner’s enormous 4-decade contribution to our organization and of the extraordinary contributions he has made to advancing the art and science of Amateur Radio, to growing our ranks, and to expanding the sheer enjoyment of ham radio around the world,” Gallagher said. Gallagher said he is looking forward to attending the ARRL 2016 National Convention, hosted by the Orlando HamCation, February 12-14.Licensed in Pennsylvania in 1966 as WA3GRF (and later N4GRF in North Carolina), Gallagher is a member of the West Palm Beach Amateur Radio Group. He describes himself as “an incurable HF DXer and inveterate tinkerer” and credits his first visit to the Franklin Institute’s Amateur Radio station W3TKQ in 1963 for inspiring his interest in ham radio.
Amateur Radio led to an early career in broadcasting. He was a cameraman and technician with WGBH-TV in Boston, the CBS Television Network, and Metromedia’s WIP Radio in Philadelphia.
He joins ARRL following 3 decades as an international investment banker and financial services executive. His career has included senior leadership positions with JP Morgan Chase & Co and CIBC Oppenheimer & Co in New York, and with Wachovia Capital Markets in Charlotte, North Carolina. He has also served as an adjunct professor at the Walsh School of Foreign Service at Georgetown University and as CEO of the Secondary School Admission Test Board in Princeton, New Jersey. Gallagher has served on boards, both public and non-profit, including two NYSE companies, the NPR affiliate in Charlotte, the Executive Board of The PENN Fund at the University of Pennsylvania, and The International Center of Photography.
Gallagher graduated magna cum laude with a BA from the University of Pennsylvania, and he holds an MBA from The Wharton School. He is a graduate of The Lawrenceville School, where he held the Nicholas Noyes scholarship.
In addition to ham radio, Gallagher enjoys saltwater fishing and sailing which, he confesses, is sometimes just an excuse to operate maritime mobile.
At his Florida home along the Intracoastal Waterway, Gallagher has maintained a fairly low Amateur Radio profile, with a wire antenna that, he says, works well into Europe and Latin America. He also has a 40 meter Windom. “I would like to work Asia when I get a better HF antenna solution,” he said. Gallagher has both modern and vintage stations as well as a high-speed multimedia (HSMM) digital repeater.
Gallagher and his wife Lindy Allyn divide their time between West Palm Beach, Florida, and Manhattan. They have three sons. He plans to return to Connecticut; he'd lived previously for 13 years in New Canaan.

ARRL CEO-Elect

3440. ARRL January VHF Contest, 900 UTC Saturday, 1/30 - 0359 UTC Monday, 1/1

About ARRL January VHF Contest

Objective: For amateurs in the US and Canada (and their possessions) to work as many amateur stations in as many different 2 degrees x 1 degree Maidenhead grid squares as possible using authorized frequencies above 50 MHz. Stations outside the US & Canada (and their possessions) may only work stations in the US (and its posessions) and Canada.Stations in KH0-9, KL7 & KP1-KP5, CY9 and CY0 count as W/VE stations and can be worked by DX stations for contest credit.
Overview

- Dates- The date will be announced annually by the ARRL but will generally be the third or fourth weekend in January. Begins 1900 UTC Saturday, ends 0359 UTC Monday (January 30-February 1, 2016)

Contest Details
January VHF Rules (Download PDF)
1. Objective: To work as many amateur stations in as many different 2 degrees x 1 degree grid squares as possible using authorized frequencies above 50 MHz. Foreign stations work W/VE amateurs only.2. Date and Contest Period: The date will be announced annually by the ARRL but will generally be the third or fourth weekend in January. Begins 1900 UTC Saturday, ends 0359 UTC Monday (January 30 - February 1, 2016).3. Entry Categories:3.1. Single Operator: One person performs all transmitting, receiving, spotting, and logging functions as well as equipment and antenna adjustments. Only one transmitted signal per band is permitted at any given time. Non-contact-producing activities as described in rule 7.1 are not considered transmitted signals for the purpose of applying this rule.3.1.1. Single Operator Low Power:3.1.1.1. Power limits on any band may not exceed the following:3.1.1.1.1. 50 MHz and 144 MHz--200 W PEP.3.1.1.1.2. 222 MHz and 432 MHz--100 W PEP.3.1.1.1.3. 902 MHz and above--50 W PEP.3.1.2. Single Operator High Power: Power limits on any band exceeds the limits for the Single Operator Low power.3.1.3. Both Single Operator High and Low Power stations compete for all-band and single-band awards.3.1.4. Overall and single-band winners are recognized in awards offered.3.2. Single Operator Portable:3.2.1. Ten (10) W PEP output or less.3.2.2. Portable power source.3.2.3. Portable equipment and antennas.3.2.4. Single Operator Portable stations must operate from a location other than a permanent station location.3.2.5. Single Operator Portable stations may not change locations during the contest period outside of the original 500-meter

diameter permitted circle.3.3. Single Operator, 3-Band: 3.3.1. Restricted to 50, 144 and 432 MHz.3.3.2. Power limits are 100 W PEP on 50 and 144 MHz, 50 W PEP on 432 MHz.3.4. Single Operator, FM Only:3.4.1. All QSOs must be made using Frequency Modulation (FM).3.4.2. Restricted to 50, 144, 222 and 440 MHz.3.4.3 Power limits are 100 W on all bands.3.5. Rover: A rover consists of no more than two operators that moves among two or more grid squares during the course of a contest. An operator may perform any or all rover functions, but a driver's function shall be limited to driving the vehicle. Drivers may be switched out during the event. Any number of observers is also allowed, however observers may not perform any rover function at any time. Rover vehicles with only one occupant are allowed to perform all functions listed above.3.5.1. A rover vehicle may transport only one station using a single call sign. An exception is provided for in "General Rules for All ARRL Contests" number 3.5 (Family Rule).3.5.2. A rover may not operate with more than one call sign.3.5.3. Rover vehicles must transport all the equipment, power supplies, and antennas used at each operating site.3.5.4. Rovers MUST sign "rover" on Phone and /R on CW and digital modes after their call sign.3.5.5. All Rovers are encouraged to adopt operating practices that allow as many stations as possible to contact them.3.5.6. Rover operators may submit separate logs for single operator (fixed station) in addition to their rover entries. Rovers submitting a score for inclusion in a club competition must also include a secondary summary sheet indicating the portion of the score that counts for the club score if any of the QSOs submitted take place outside of their club's territory.3.5.7. A rover may not make more than 100 QSOs with any other one rover.3.6. Limited Rover. Same as the "Rover" class above, but competes using only the lowest four bands available for any given contest (6M - 432 MHz for VHF+ contests, 222MHz - 1.2 GHz for August UHF). Output power limits shall be the same as those defined for the Single Operator Low Power category (3.1.1)3.7. Unlimited Rover. Same as "Rover" class above, but Unlimited Rovers may use more than two operators and are exempt from rules 3.5.3 and 3.5.7.3.7.1. Unlimited Rover scores may NOT be applied to a club score for Club Competition.3.8.
Multioperator:3.8.1.Multioperator (Unlimited): Stations submit logs with more than four bands used.3.8.2. Limited Multioperator: Stations submit logs with a maximum of four bands used. (Logs from additional bands used, if any, should be included as checklogs.)4. Exchange:4.1. Maidenhead grid-square locator (see www.arrl.org/grid-squares)4.2. Exchange of signal report is optional.5. Scoring5.1. QSO points:5.1.1. Count one point for each complete 50- or 144-MHz QSO.5.1.2. Count two points for each 222- or 432-MHz QSO.5.1.3. Count four points for each 902- or 1296-MHz QSO.5.1.4. Count eight points for each 2.3 GHz (or higher) QSO.5.2. Multiplier: The total number of different grid squares worked per band. Each grid square counts as one multiplier on each band it is worked.5.3. Final score: Multiply the total number of QSO points from all bands operated by the total number of multipliers for final score.5.4. Rovers only: The final score consists of the total number of QSO points from all bands times the sum of unique multipliers (grid squares) worked per band (regardless of which grid square they were made in) plus one additional multiplier for every grid square from which they successfully completed a contact.5.4.1. Rovers are listed in the contest score listings under the Division from which the most QSOs were made.6. Reporting:6.1. Email electronic Cabrillo-formatted logs to JanuaryVHF@...; hand-written paper logs or diskettes should be mailed to ARRL January VHF Contest, 225 Main St, Newington, CT 06111.6.2. Entries that have been electronically generated must submit their log file in the Cabrillo file format. Paper printouts of electronic files are not acceptable substitutes. Logs created with word processing or spreadsheet software are considered electronic logs and must be submitted in Cabrillo format.6.3. Entries must be emailed or postmarked no later than 0359 UTC Wednesday, March 2, 2016.6.4. Entries may be submitted using the web applet.
6.5. Rovers who submit scores for the club competition must submit a second summary sheet

indicating QSOs and score if they make any contacts from outside of the club territory. Indicate clearly on the summary sheet and in log if the log is the total entry or that portion to be counted for the club score.7. Miscellaneous:7.1 All entrants, regardless of category, are permitted to use spotting assistance or nets including but not limited to DX-alerting nets, internet chat rooms, APRS and other packet, reverse beacon networks and repeaters to identify stations available for contacts and to announce (self-spot) their availability for contacts. Announcements shall be limited to call sign, location, band or frequency, mode and–if applicable–transmitting sequence and listening direction. These methods of spotting assistance may also be used to coordinate antenna peaking prior to initiation of the contact and to explain contest rules, such as the exchange required, for those who need clarification. Such assistance may not be used to facilitate the completion of any contact once the contact has commenced. This means such assistance may not be used to convey receipt or non-receipt of any required element of a contact or to request a repeat of any required element of a contact.7.2. Stations may be worked for credit only once per band from any given grid square, regardless of mode. This does not prohibit working a Rover station from more than one grid square with the same call sign.7.3. All stations may have only one signal per band (6, 2, 220MHz, etc) at any given time regardless of mode.7.4. Multioperator stations may not include QSOs with their own operators except on frequencies higher than 2.3 GHz. Even then, a complete, different station (transmitter, receiver and antenna) must exist for each QSO made under these conditions.8. Awards: Certificates will be awarded in the following categories:8.1. Single Operator8.1.1. Top Single Operator entrant in each ARRL/RAC Section for High and Low Power.8.1.2. Top single operator on each band (50, 144, 222, 432, 902, 1296 and 2304- and-up categories) in each ARRL/RAC Section where significant effort or competition is evident. (Note: Since the highest score per band will be the award winner for that band, an entrant may win a certificate with additional single-band endorsements.) For example, if KA1RWY has the highest single-operator all-band score in the CT Section and her 50- and 222-MHz scores are higher than any other CT single operator’s, she will earn a certificate for being the single-operator Section leader and endorsements for 50 and 222 MHz.8.2. Top Single Operator, Portable entrant in each ARRL/RAC Section where significant effort or competition is evident. (Single operator portable entries are not eligible for single-band awards.)8.3.Top Single Operator, 3-Band entrant in each ARRL/RAC Section where significant effort or competition is evident.(Single Operator, 3-Band entries are not eligible for single-band awards.)8.4. Top Single Operator, FM Only entrant in each ARRL/RAC Section where significant effort or competition is evident. (Single Operator, FM Only entries are not eligible for single-band awards.)8.5. Top Rover, Limited Rover and Unlimited Rover entrant in each ARRL Division and Canada where significant effort or competition is evident. (Rover entries are not eligible for single-band awards.)8.6. Top Multioperator score in each ARRL/RAC Section where significant effort or competition is evident. (Multioperator entries are not eligible for single-band awards.)8.7. Top Limited Multioperator in each ARRL/RAC Section where significant effort or competition is evident. (Limited Multioperator entries are not eligible for single-band awards.)8.8. Top DX stations where significant effort or competition is evident.9. Other:9.1. See “General Rules for All ARRL Contests” and “General Rules for ARRL Contests on bands above 50 MHz (VHF)”9.2. For more information contact contests@... or (860) 594-0232.

3441. 1kW Amplifier for Sale

Yahoo group: IndyHamRadio
Date: 2016-02-06 16:05:11 UTC
From: Ray K9DUR
Topic: 3441 Message: 3441

The Wabash Valley Amateur Radio Association in Terre Haute, IN, has an RM-Italy BLK-1000 solid-state amplifier for sale. Is is a part of the equipment from the WA9WJJ estate. This amplifier covers 160m through 6m and features both automatic & manual band switching.

The amp has been fully checked out, and, except for a small dent in one corner of the cover, is in perfect condition.

We are asking $3000 for the amp, delivered within a 200-mile radius of Terre Haute. The price is negotiable.

If interested, contact me directly at (812)236-6522 or k9dur@....

We are excited to announce the release of the newAESHAM.COM website. It seems just like yesterday that we did our lastupgrade. Like technology in radios, website technology has also improveddramatically. Most of the improvements will be transparent to you but weswitched to a system that will allow for greater flexibility and allow usto do more in the future.

User Accounts
Since we switched to a completely differentplatform we couldn't export user accounts from the old site. We ask thatregistered users please take a few moments on their next order to

create anew user account. We apologize for any inconvenience.
Order History
Your history of purchases made on the oldAESHAM.COM site will not show on the new site. Don't worry, we do have yourcomplete order history saved on our computer. If you need a copy of aninvoice just drop us an email andwe will be happy to send it to you.

3446. Propagation, DXpeditions, and Radio Science Presentation at the Whitley County Amateur Radio Club May 12, 2016 Meeting

Yahoo group: IndyHamRadio
Date: 2016-05-02 02:02:11 UTC
From: Roger McEntarfer
Topic: 3446 Message: 3446

The Whitley County Amateur Radio Club Vice President, Luke Hollmann / K5YZ is excited to announce that the <http://www.qsl.net/fwdxa/> Fort Wayne DX Association, Carl Leutzelschwab K9LA and his wife Vicky AE9YL will give a presentation titled "Propagation, DXpeditions, and Radio Science" at our monthly club meeting April 12.

Carl plans to speak for about 45 minutes and cover the following 3 topics:

1) A quick update on Solar Cycle 24 so we know what to expect on the HF bands for the next several years.

2) Carl and Vicky's DXpedition efforts to YK Syria, OJ0 Market Reef and ZF Cayman Islands

3) Amateur Radio contributions to radio science to get us thinking about the total solar eclipse of August 21, 2017

The Whitley County Amateur Radio Club (WCARC) meeting is scheduled from 6 - 8 PM in Community Room A and B at the Peabody Public Library, 1160 East SR 205 in Columbia City. The presentation will be at the end of club business, likely around 7 PM or a little after.

There will be a raffle at the May meeting for a Baofeng dual band handheld Amateur Radio.

The public is welcome and encouraged to attend any WCARC meetings.

For further information on the Whitley County Amateur Radio Club contact WCARC Public Information Officer Roger McEntarfer / N9QCL via email at n9qcl@... <mailto:n9qcl@...> or phone (260) 503-9008.

From: W9FG
Topic: 3450 Message: 3450

Each year the Indianapolis Hamfest donates to the ARRL Foundation. The donation is then awarded as an educational scholarship. This year the scholarship is awarded to a Zionsville native, Tanner Thompson, KC9JOC. Congratulate Tanner when you see him at the Indianapolis Hamfest.

Pick up advance sale tickets at local distributors. Visit the Indy Hamfest website for a list of the distributors.

Also note, I just heard there are a few tables remaining available in the air conditioned building.

From: Mark Thompson
Topic: 3452 Message: 3452

http://www.arrl.org/news/ham-radio-outlet-to-acquire-some-aes-employees-re-open-milwaukee-location-as-hro-branch

Ham Radio Outlet to Acquire Some AES Employees, Re-Open Milwaukee Location as HRO Branch

07/12/2016Ham Radio Outlet (HRO) has announced plans to hire an unspecified number of Amateur Electronic Supply (AES) employees, when AES shuts down its four locations in late July. In addition, the current AES Headquarters store in Milwaukee will become HRO's newest location later this summer, following renovation. On July 1, AES announced that it was going out of business and ending retail operations at its Milwaukee, Las Vegas, Cleveland, and Orlando locations. With the approval of AES management, HRO senior managers visited each AES location to interview staffers in hopes of "acquiring some of the Amateur Radio retail employee talent in each of the current AES locations," an HRO news release said."Together with this interview process, HRO examined what it would take to perhaps acquire one or more of the AES store locations. At the time of these interviews, many opportunities were explored with current AES senior management," the release continued. "We are very excited to announce that HRO was successful in providing offers of employment to a number of soon-to-be-former AES employees, and that to some, we have offered positions that involve HRO-sponsored and funded relocation.HRO announced that once AES shutters its Milwaukee location at 5710 W Good Hope Road on July 28, Ham Radio Outlet will undertake an extensive remodeling project to create a new HRO Milwaukee store at the same site, which will open at the end of August."It is with great pleasure that we are able to continue Terry Sterman and Phil Majerus' legacy of providing a fantastic Amateur Radio store in Milwaukee, Wisconsin," HRO President Robert Ferrero, W6KR. "It is our immediate goal to have the largest, most well-stocked Amateur Radio retail store in North America and perhaps even the world." HRO National Sales Manager Steve Gilmore, W4SHG, said the Milwaukee location will be "a showplace that all must come see!"After AES closes on July 28, all former AES locations' direct and toll-free telephone numbers will be redirected to the closest HRO location, and the AES website will be directed to HRO's website.A family-owned business, HRO is the world's largest Amateur Radio dealership, with locations from New England to the West Coast. It opened a new outlet in Plano, Texas, in February 2015 and is relocating and expanding its Portland, Oregon, store, which will open on July 25 at 14405 SW Pacific Highway.
http://www.hamradio.com/press-release.cfm

Ham Radio Outlet - Press Release for Immediate Release
July 12, 2016RE: HRO-Milwaukee, Amateur Electronic Supply's closing on 7/28/2016On July 1, 2016 Amateur Electronic Supply (AES) made the decision to close down their entire organization and terminate all retail operations at their Las Vegas, Cleveland, Orlando and Milwaukee locations.Upon hearing the news, and with the concurrence of AES senior management, Ham Radio Outlet (HRO) sent senior management to each location to interview the staff with hopes of acquiring some of the Amateur Radio retail employee talent in each of the current AES locations.Together with this interview process, HRO examined what it would take to perhaps acquire one or more of the AES store locations. At the time of these

interviews, many opportunities were explored with current AES senior management.We are very excited to announce that HRO was successful in providing offers of employment to a number of soon to be former AES employees and that to some, we have offered positions that involve HRO sponsored and funded relocation.We are also extremely pleased to announce that, after the closing of the Milwaukee AES location on July 28, 2016, Ham Radio Outlet will begin an extensive remodeling project to create the largest Amateur Radio retail showroom in North America. We will open our newest and largest Ham Radio Outlet in Milwaukee at the end of August 2016.Effective at the closing of AES on July 28, 2016, all former AES locations' direct telephone numbers and toll free telephone numbers will be redirected to the closest HRO location so as to not disrupt providing service to the AES customer base. Additionally effective on July 28, 2016, the www.aesham.com website will be directed to www.hamradio.com also so as not to disrupt service for the AES online customer base.Steve Gilmore, National Sales Manager for HRO states, "We are extremely excited to have a store in the Central Northern part of the United States. It will minimize shipping times for our products to be able to be delivered in 2 days or less in most of the lower 48 United States. We are building a showplace that all must come see! It will be expansive with massive inventory levels and a large all encompassing demonstration area featuring nearly all of the Amateur Radio transceivers on the market today."Robert Ferrero, President of HRO tells us, "It is with great pleasure that we are able to continue Terry Sterman and Phil Majerus' legacy of providing a fantastic Amateur Radio store in Milwaukee, Wisconsin. It is our immediate goal to have the largest, most well stocked Amateur Radio retail store in North America and perhaps even the world."HRO is a family owned business with 14 sales locations throughout the United States which includes a formidable presence on the Internet, making it the largest Ham Radio dealership in the world.HRO has been continually expanding with our most recent location in Plano, Texas which opened on February 2, 2015. HRO is also continuing to evolve with the relocation and expansion of our Portland store which will open on July 25, 2016 at 14405 SW Pacific Highway, Portland, Oregon 97224.Ham Radio Outlet - Milwaukee is located at 5710 W Good Hope Rd, Milwaukee, Wisconsin. It will be open for business at the end of August 2016.

Dayton Hamvention® 2017 News Update The Dayton Amateur Radio Association (DARA) regrets to inform our many vendors, visitors and stakeholders that, unfortunately, HARA has announced the closing of their facility. We have begun execution of our contingency plan to move Hamvention® 2017 to a new home.

DARA and Hamvention® have enjoyed many successful years working together with HARA Arena and we wish the Wampler family the best.

DARA and Hamvention® have been working on a contingency plan in the event HARA would become unavailable. We have spent many hours over the last few years evaluating possible locations and have found one in the area we believe will be a great new home! Due to logistics and timing issues, we will make a formal announcement introducing our new partner. This information will be coming soon. We all believe this new venue will be a spectacular place to hold our beloved event. Please rest assured we will have the event on the same weekend and, since it will be in the region, the current accommodations and outside events already planned for Hamvention 2017 should not be affected.
We look forward to your continued support as we move to a new future with The Dayton Hamvention®. Ron Cramer General Chairman Dayton Hamvention 2017 mailto:chair@...

3458. Louisville Hamfest is Saturday!

Yahoo group: IndyHamRadio
Date: 2016-09-08 22:14:57 UTC
From: Dan Evans
Topic: 3458 Message: 3458

I hope to see everyone at the Louisville Hamfest Saturday! I will be inside this year, manning the table for the Clark County Amateur Radio Club. Stop by and say hi! I know a lot of the folks here are interested in repeaters and commercial gear. We will have several amateur and commercial repeaters, amps, and accessories for sale. VHF/222/ & UHF... We also have many Kenwood and Motorola commercial radios, antennas, and more.

All proceeds will benefit the Clark County Amateur Radio Club!

It all must go!

No reasonable offer refused!
Unreasonable offers considered!
Ridiculous offers ridiculed mercilessly ;-)

Today (Monday) evening is the 144 MHz Fall
Sprint, 7:00 PM to 11:00 PM local time.

The exchange is your four digit grid square.
Score one point per QSO and your final score is total QSO points x grids worked. Categories are single-op or rover, and there are no sub-categories for power.

Full rules are available at:
http://svhfs.org/2016_Fall_Sprint_Rules.pdf

With a few short weeks left to the year, we must get this bill passed NOW or we will need to start all over again come January 1, 2017. As you know, thanks to your previous efforts, the legislative efforts scored a major victory in our campaign when the Amateur Radio Parity Act, H.R. 1301, passed in the House of Representatives on September 12th. The legislation is now in the Senate in two forms – as H.R. 1301 and alternately in the packaged bill S. 253. We still need every Senator to approve the bill. You are one of over 730,000 licensed Amateur Radio Operators living in the United States. Many of you already live in deed-restricted communities, and that number grows daily. We asked you for your help in September - and you responded in great numbers. We collected over 63,000 emails that were distributed to every single U.S. Senator. That is amazing. However, with the election hiatus over, each and every Senator must be reminded that their business is not complete until this important legislation affecting hams is passed and sent to the President. Even if you wrote in the past, we need you to write again! ONCE AGAIN I REMIND YOU THAT NOW IS THE TIME FOR ALL HAMS TO GET INVOLVED IN THE PROCESS!
- If you want to have effective outdoor antennas but are not currently allowed to do so by your Home Owner’s Association, PLEASE SEND THESE EMAILS TODAY!

- If you don’t live in a deed-restricted community but you care about the future of Amateur Radio, please support your avocation and your fellow hams and SEND THESE EMAILS TODAY!
  We need you to reach out one more time to your Senators TODAY! Right away Right now! Help us in the effort. Please go to this linked website and follow the prompts:

https://arrl.rallycongress.net/ctas/urge-us-senate-to-pass-amateur-radio-parity-act
Thank you. 73, Rick Roderick, K5UR ARRL - The national association for Amateur Radio®
ABOUT THIS E-MAIL This e-mail was sent by ARRL, and contains timely information of importance to all radio amateurs. It was sent by ARRL to current and previous members. Your email address was not shared with any third party. _filtered #yiv8673931404 {font-family:"Cambria Math";panose-1:2 4 5 3 5 4 6 3 2 4;} _filtered #yiv8673931404 {font-family:Calibri;panose-1:2 15 5 2 2 2 4 3 2 4;}#yiv8673931404 p.yiv8673931404MsoNormal, #yiv8673931404 li.yiv8673931404MsoNormal, #yiv8673931404 div.yiv8673931404MsoNormal {margin:0in;margin-bottom:.0001pt;font-size:11.0pt;font-family:"Calibri", sans-serif;}#yiv8673931404 .yiv8673931404MsoChpDefault {font-size:10.0pt;} _filtered #yiv8673931404 {margin:1.0in 1.0in 1.0in 1.0in;}#yiv8673931404 div.yiv8673931404WordSection1 {}

3464. Amateur Radio Newsline: Radio Amateur Fatally Shot in Chicago

From: Mark Thompson
Topic: 3464 Message: 3464

Amateur Radio Newsline Report 2040, Friday, December 2, 2016
*** CLOSED CIRCUIT ADVISORY ****
The following is a closed circuit advisory and not for broadcast.
Newscast #2040 is an expanded edition of Amateur Radio Newsline, containing a special report on Pearl Harbor Day in the third and final segment. This newscast has three segments and there are two breaks for identification.
And now, here's this week's anchor, Jim Damron N8TMW.
**
Amateur Radio Newsline Report Number 2040 with a release date of Friday, December 2, 2016 to follow in 5-4-3-2-1.
The following is a QST. An amateur radio operator is killed by a suspect being pursued by police. Hams assist with shelter communications during Tennessee wildfires. An uninhabited Hawaiian island comes alive with radio -- and we share memories of Pearl Harbor in December 1941. All this and more as we bring you Amateur Radio Newsline Report #2040 in an expanded edition this week.
**
BREAKING NEWS
RADIO AMATEUR FATALLY SHOT IN CHICAGO
JIM: As Amateur Radio Newsline went to production on Thursday, Dec. 1, this news broke about the tragic killing of an amateur radio operator in Chicago. Tyrone Hardin KD9ERC, who worked as a railroad security guard, was fatally shot after his vehicle was stolen by a man being pursued by police for an earlier car theft. He was pronounced dead of bullet wounds to the abdomen at South Suburban Hospital by the Cook County Medical Examiner's office. It was 6:25 p.m., not quite two hours after the shooting on Saturday, November 26. Tyrone got his license after testing with the 220 MHz Guys Amateur Radio Club in Chicago. Police have issued a warrant for 24-year-old Rashad Williams of East Hazel Crest. He is being charged with first-degree murder in Tyrone's killing.
His wife Gwinette Oliver told the Chicago Sun-Times he was working the security guard post as a second job so he would have enough money to give his family a nice Christmas. She said he asssured her the job wasn't dangerous.
Tyrone Hardin was 38 years old and the father of a 5-year-old son.
(CHICAGO SUN TIMES)

3465. Upcoming Amateur Radio Test Session to be held Saturday January 28, 2017

Yahoo group: IndyHamRadio
Date: 2016-12-28 02:50:48 UTC
From: Roger McEntarfer
Topic: 3465 Message: 3465

The next Whitley County W5YI Amateur Radio Test Session will be held on Saturday January 28, 2017 from 9:00 till 11:00 AM

In Community Room A of the Peabody Library

1160 E. State Rd. 205 - Columbia City, Indiana.

For additional information contact

Roger McEntarfer via email at <mailto:n9qcl@...> n9qcl@... or via phone at 260-503-9008.

3466. Whitley County Emergency Management Program to be presented at the January 12 Whitley County Amateur Radio Club Meeting

Contest Details
January VHF Rules (Download PDF) http://www.arrl.org/files/file/Contest%20Rules%20PDFs/2016/2016%20ARRL%20January%20VHF%20Contest%20Rules.pdf1. Objective: To work as many amateur stations in as many different 2 degrees x 1 degree grid squares as possible using authorized frequencies above 50 MHz. Foreign stations work W/VE amateurs only.2. Date and Contest Period: The date will be announced annually by the ARRL but will generally be the third or fourth weekend in January. Begins 1900 UTC Saturday, ends 0359 UTC Monday (January 21-23, 2017).3. Entry Categories:3.1. Single Operator: One person performs all transmitting, receiving, spotting, and logging functions as well as equipment and antenna adjustments. Only one transmitted signal per band is permitted at any given time. Non-contact-producing activities as described in rule 7.1 are not considered transmitted signals for the purpose of applying this rule.3.1.1. Single Operator Low Power:3.1.1.1. Power limits on any band may not exceed the following:3.1.1.1.1. 50 MHz and 144 MHz--200 W PEP.3.1.1.1.2. 222 MHz and 432 MHz--100 W PEP.3.1.1.1.3. 902 MHz and above--50 W PEP.3.1.2. Single Operator High Power: Power limits on any band exceeds the limits for the Single Operator Low power.3.1.3. Both Single Operator High and Low Power stations compete for all-band and single-band awards.3.1.4. Overall and single-band winners are recognized in awards offered.3.2. Single Operator Portable:3.2.1. Ten (10) W PEP output or less.3.2.2. Portable power source.3.2.3. Portable equipment and antennas.3.2.4. Single Operator Portable stations must operate from a location other than a permanent station location.3.2.5. Single Operator Portable stations may not change

locations during the contest period outside of the original 500-meter diameter permitted circle.3.3. Single Operator, 3-Band:3.3.1. Restricted to 50, 144 and 432 MHz.3.3.2. Power limits are 100 W PEP on 50 and 144 MHz, 50 W PEP on 432 MHz.3.4. Single Operator, FM Only:3.4.1. All QSOs must be made using Frequency Modulation (FM).3.4.2. Restricted to 50, 144, 222 and 440 MHz.3.4.3 Power limits are 100 W on all bands.3.5. Rover: A rover consists of no more than two operators that moves among two or more grid squares during the course of a contest. An operator may perform any or all rover functions, but a driver's function shall be limited to driving the vehicle. Drivers may be switched out during the event. Any number of observers is also allowed, however observers may not perform any rover function at any time. Rover vehicles with only one occupant are allowed to perform all functions listed above.3.5.1. A rover vehicle may transport only one station using a single call sign. An exception is provided for in "General Rules for All ARRL Contests" number 3.5 (Family Rule).3.5.2. A rover may not operate with more than one call sign.3.5.3. Rover vehicles must transport all the equipment, power supplies, and antennas used at each operating site.3.5.4. Rovers MUST sign "rover" on Phone and /R on CW and digital modes after their call sign.3.5.5. All Rovers are encouraged to adopt operating practices that allow as many stations as possible to contact them.3.5.6. Rover operators may submit separate logs for single operator (fixed station) in addition to their rover entries. Rovers submitting a score for inclusion in a club competition must also include a secondary summary sheet indicating the portion of the score that counts for the club score if any of the QSOs submitted take place outside of their club's territory.3.5.7. A rover may not make more than 100 QSOs with any other one rover.3.6. Limited Rover. Same as the "Rover" class above, but competes using only the lowest four bands available for any given contest (6M - 432 MHz for VHF+ contests, 222MHz - 1.2 GHz for August UHF). Output power limits shall be the same as those defined for the Single Operator Low Power category (3.1.1)3.7. Unlimited Rover. Same as "Rover" class above, but Unlimited Rovers may use more than two operators and are exempt from rules 3.5.3 and 3.5.7.3.7.1. Unlimited Rover scores may NOT be applied to a club score for Club Competition.3.8. Multioperator:3.8.1.Multioperator (Unlimited): Stations submit logs with more than four bands used.3.8.2. Limited Multioperator: Stations submit logs with a maximum of four bands used. (Logs from additional bands used, if any, should be included as checklogs.)4. Exchange:4.1. Maidenhead grid-square locator (see www.arrl.org/grid-squares)4.2. Exchange of signal report is optional.5. Scoring5.1. QSO points:5.1.1. Count one point for each complete 50- or 144-MHz QSO.5.1.2. Count two points for each 222- or 432-MHz QSO.5.1.3. Count four points for each 902- or 1296-MHz QSO.5.1.4. Count eight points for each 2.3 GHz (or higher) QSO.5.2. Multiplier: The total number of different grid squares worked per band. Each grid square counts as one multiplier on each band it is worked.5.3. Final score: Multiply the total number of QSO points from all bands operated by the total number of multipliers for final score.5.4. Rovers only: The final score consists of the total number of QSO points from all bands times the sum of unique multipliers (grid squares) worked per band (regardless of which grid square they were made in) plus one additional multiplier for every grid square from which they successfully completed a contact.5.4.1. Rovers are listed in the contest score listings under the Division from which the most QSOs were made.6. Reporting:6.1. Email electronic Cabrillo-formatted logs to JanuaryVHF@...; hand-written paper logs or diskettes should be mailed to ARRL January VHF Contest, 225 Main St, Newington, CT 06111.6.2. Entries that have been electronically generated must submit their log file in the Cabrillo file format. Paper printouts of electronic files are not acceptable substitutes. Logs created with word processing or spreadsheet software are considered electronic logs and must be submitted in Cabrillo format.6.3. Entries must be emailed or postmarked no later than 0359 UTC Wednesday, February 22, 2017.6.4. Entries may be submitted using the web app6.5. Rovers who submit

scores for the club competition must submit a second summary sheet indicating QSOs and score if they make any contacts from outside of the club territory. Indicate clearly on the summary sheet and in log if the log is the total entry or that portion to be counted for the club score.7. Miscellaneous:7.1 All entrants, regardless of category, are permitted to use spotting assistance or nets including but not limited to DX-alerting nets, internet chat rooms, APRS and other packet, reverse beacon networks and repeaters to identify stations available for contacts and to announce (self-spot) their availability for contacts. Announcements shall be limited to call sign, location, band or frequency, mode and–if applicable–transmitting sequence and listening direction. These methods of spotting assistance may also be used to coordinate antenna peaking prior to initiation of the contact and to explain contest rules, such as the exchange required, for those who need clarification. Such assistance may not be used to facilitate the completion of any contact once the contact has commenced. This means such assistance may not be used to convey receipt or non-receipt of any required element of a contact or to request a repeat of any required element of a contact.7.2. Stations may be worked for credit only once per band from any given grid square, regardless of mode. This does not prohibit working a Rover station from more than one grid square with the same call sign.7.3. All stations may have only one signal per band (6, 2, 220MHz, etc) at any given time regardless of mode.7.4. Multioperator stations may not include QSOs with their own operators except on frequencies higher than 2.3 GHz. Even then, a complete, different station (transmitter, receiver and antenna) must exist for each QSO made under these conditions.8. Awards: Certificates will be awarded in the following categories:8.1. Single Operator8.1.1. Top Single Operator entrant in each ARRL/RAC Section for High and Low Power.8.1.2. Top single operator on each band (50, 144, 222, 432, 902, 1296 and 2304-and-up categories) in each ARRL/RAC Section where significant effort or competition is evident. (Note: Since the highest score per band will be the award winner for that band, an entrant may win a certificate with additional single-band endorsements.) For example, if KA1RWY has the highest single-operator all-band score in the CT Section and her 50- and 222-MHz scores are higher than any other CT single operator’s, she will earn a certificate for being the single-operator Section leader and endorsements for 50 and 222 MHz.8.2. Top Single Operator, Portable entrant in each ARRL/RAC Section where significant effort or competition is evident. (Single operator portable entries are not eligible for single-band awards.)8.3.Top Single Operator, 3-Band entrant in each ARRL/RAC Section where significant effort or competition is evident.(Single Operator, 3-Band entries are not eligible for single-band awards.)8.4. Top Single Operator, FM Only entrant in each ARRL/RAC Section where significant effort or competition is evident. (Single Operator, FM Only entries are not eligible for single-band awards.)8.5. Top Rover, Limited Rover and Unlimited Rover entrant in each ARRL Division and Canada where significant effort or competition is evident. (Rover entries are not eligible for single-band awards.)8.6. Top Multioperator score in each ARRL/RAC Section where significant effort or competition is evident. (Multioperator entries are not eligible for single-band awards.)8.7. Top Limited Multioperator in each ARRL/RAC Section where significant effort or competition is evident. (Limited Multioperator entries are not eligible for single-band awards.)8.8. Top DX stations where significant effort or competition is evident.9. Other:9.1. See “General Rules for All ARRL Contests” and “General Rules for ARRL Contests on bands above 50 MHz (VHF)”9.2. For more information contact contests@...g or (860) 594-0232.

3468. Columbia City Mayor Ryan Daniels to speak at the February 9, 2017 Whitley County Amateur Radio Club Meeting

Dayton 2017 Activities
It's time to start the pilgrimages to the Dayton Hamvention(r). There's several D-STAR activities going on. Hope to see you there. Here's a summary of what you'll see.
Ed WA4YIH
www.DSTARInfo.com
Dayton Hamvention(r)

120 Fairground Road, Xenia 45385

Coordinates are 39.7021N - 83.9420W

GPS will not necessarily show the correct directions after entering Xenia. It may take you through closed gates.

The Hamvention is recommending using off-site parking

Talk In
For directions and assistance in the Dayton Area during your visit to Hamvention(r), contact "Talk-In" on the DARA Repeater 146.940-, alternate 146.985- 123.0 PL. The talk in crew will have up to date information on traffic conditions and parking and will be able to provide re-routing directions if needed. Talk In will be on the air starting at 7 a.m. on Thursday and Sunday and at 5 a.m. on Friday and Saturday. Be sure to listen.
D-STAR Activities at Dayton
Thursday, May 18, 7-9 PM - Pre-Hamvention Meet, Greet, and Eyeball QSO
Marion's Piazza
1320 N Fairfield Rd
Beavercreek OH 45432
Friday, May 19, 12:00-1:00 PM - D-STAR Forum
Forum Room 1
Dayton Hamvention
Friday, May 19, 6:30-8:30 PM - D-STAR Friday Evening Gathering - D-STAR Updates
Drury Inn Ballroom
6616 Miller Lane
Dayton OH

"Who ya' gonna call? Columbia City / Whitley County Area Radio Hams!"

Public Demo of Emergency Communications June 24-25

Columbia City, IN Starting June 24, 2017 - Despite the Internet, cell phones, email and modern communications, every year whole regions find themselves in the dark. Tornadoes, fires, storms, ice and even the occasional cutting of fiber optic cables leave people without the means to communicate. In these cases, the one consistent service that has never failed has been Amateur Radio. These radio operators, often called "hams" provide backup communications for everything from the American Red Cross to FEMA and even for the International Space Station. Your Town's "hams" will join with thousands of other Amateur Radio operators showing their emergency capabilities this weekend.

Over the past year, the news has been full of reports of ham radio operators providing critical communications during unexpected emergencies in towns across America including the California wildfires, winter storms, tornadoes and other events world-wide. When trouble is brewing, Amateur Radio's people are often the first to provide rescuers with critical information and communications. On the weekend of June 24-25, the public will have a chance to meet and talk with Whitley County ham radio operators and see for themselves what the Amateur Radio Service is about as hams across the USA will be holding public demonstrations of emergency communications abilities.

This annual event, called "Field Day" is the climax of the week long "Amateur Radio Week" sponsored by the ARRL, the national association for Amateur Radio. Using only emergency power supplies, ham operators will construct emergency stations in parks, shopping malls, schools and backyards around the country. Their slogan, "When All Else Fails, Ham Radio Works" is more than just words to the hams as they prove they can send messages in many forms without the use of phone systems, internet or any other

infrastructure that can be compromised in a crisis. More than 35,000 amateur radio operators across the country participated in last year's event.

"The fastest way to turn a crisis into a total disaster is to lose communications," said Allen Pitts of the ARRL. "From the earthquake and tsunami in Japan to tornadoes in Missouri, ham radio provided the most reliable communication networks in the first critical hours of the events. Because ham radios are not dependent on the Internet, cell towers or other infrastructure, they work when nothing else is available.

We need nothing between us but air."

In the Columbia City area, the Whitley County Amateur Radio Club will be demonstrating Amateur Radio at the Whitley County 4-H Fair Grounds, 680 W Squawbuck Rd, Columbia City, IN 46725 on June 24 & 25, 2017. They invite the public to come and see ham radio's new capabilities and learn how to get their own FCC radio license before the next disaster strikes.

Amateur Radio is growing in the US. There are now over 700,000 Amateur Radio licensees in the US, and more than 2.5 million around the world. Through the ARRL's Amateur Radio Emergency Services program, ham volunteers provide both emergency communications for thousands of state and local emergency response agencies and non-emergency community services too, all for free.

To learn more about Amateur Radio, go to www.emergency-radio.org. The public is most cordially invited to come, meet and talk with the hams. See what modern Amateur Radio can do. They can even help you get on the air!

3488. Illinois QSO Party, 1700Z October 22nd to 0100Z October 23rd 2017

Yahoo group: IndyHamRadio
Date: 2017-10-15 17:50:14 UTC
From: Mark Thompson
Topic: 3488 Message: 3488
Attachments: 3 described; binary payloads are missing from this source WARC

http://www.w9awe.org/ILQP.html
Announcing the 2017 Illinois QSO Party… Sponsored by The Western Illinois Amateur Radio Club. Inc.

Date/Time: 1700Z October 22 to 0100Z October 23, 2017

Bands: 160 through 2 meters, excluding 60, 30, 17, and 12 meters.

Special band activity times:
IL stations are encouraged to spend some time on 20 meters in the early afternoon to work DX stations seeking IL counties and to check 15 meters and 10 meters at 1800Z, 1900Z and 2000Z.

Exchange:
IL stations give RST and county; others give RST and state, province, or country.
Scoring: Count 1 point per phone QSO, 2 points per CW/digital QSO. No repeater QSOs. All stations are limited to one transmitted signal at a time. SO2R operation is permitted. Stations may be worked once per band and mode (phone and CW/digital), and once per band/mode/county for IL Mobile and Rover stations. Each Mobile or Rover vehicle is considered one station and must use only one call. Contacts with/by stations at the border of 2 counties count as 2 counties and 2 QSOs; the border of 3 (or 4) counties count as 3 (or 4) counties and 3 (or 4) QSOs. IL stations multiply points by the sum of states, IL counties, VE provinces, and a maximum of 5 DXCC countries (for this event W/K, Alaska, Hawaii and VE do not count as DX entities). Count additional DX for QSO points but not for additional multipliers. Non-IL stations multiply points by number of IL counties worked.

Entry Classes:
Illinois Fixed Station, High Power: Permanent station location, single county, with a transmitter output power level exceeding 200W PEP.
Illinois Fixed Station, Low Power: Permanent station location, single county, with a transmitter output power level not exceeding 200W PEP.
Illinois Portable: Not a permanent station location; antennas erected for the purpose of the contest; may be on a county line or corner. (Note: County lines established by waterways may not be activated in the ILQP.)

Illinois Mobile:
Stations capable of motion while operating though may be stationary. Entrants are encouraged to utilize a separate driver and to choose operating procedures with safety uppermost in mind! Mobile entrants may operate from only one county at a time. Simultaneous operation from more than one county will result in reclassification to “Rover” category.

Illinois Rover:
Stations operating from more than one non-permanent location. Single county, county line and county corner operation is permitted. Any type of mobile or portable antennas may be used. Any power source may be used (auto, generator or commercial mains). Rover stations may operate while moving or stopped.

Outside Illinois, High Power: Any fixed, portable or mobile station operating from outside the state of Illinois, with a transmitter output power level exceeding 200W PEP.
Outside Illinois, Low Power: Any fixed, portable or mobile station operating from outside the state of Illinois, with a transmitter output power level not exceeding 200W PEP.
Rev 0 – 5 September 2016

QRP Competition:
A QRP entrant shall certify that operation was with a transmitter output power level of 5 watts or less at all times by checking the QRP box in the Entry Class column on the summary sheet. QRP stations should also indicate an Entry Class. QRP competition is independent of Entry Class.

Awards:
Plaques will be awarded to the highest-scoring IL Fixed Station High Power, IL Fixed Station Low Power, IL Mobile, IL Rover, IL Portable, IL 2 County Line Portable, Outside Illinois Station High Power, and Outside Illinois Station Low Power. Plaques will also be awarded, regardless of entry class or station location, to the station reporting the highest raw Phone only QSO total, the highest raw CW only QSO total and the highest raw Mixed Mode QSO total. (Note: Illinois county line or county corner QSO multipliers do not apply for the raw QSO awards.)
Certificates will be awarded to the 2nd through 5th place IL Fixed Stations, High Power, the 2nd through 5th place IL Fixed Stations, Low Power, the 2nd through 5th place IL Mobiles, the 2nd through 5th place IL Rovers, the top IL and the top Outside Illinois QRP stations, and the highest scoring station (reporting at least 25 IL contacts) in each state, province, and country. Certificates will also be awarded to the top 3 IL single county Portables, the 2nd and 3rd place IL 2 county line Portables, the top 3 IL 3 county line Portables and 2nd and 3rd place IL four county line Portables. As certificates are delivered in electronic format via email, all entrants are requested to include a valid email address on their summary sheet. If a certificate winner desires a hard copy version, the WIARC will do so for a donation 0f $2.50 to cover the costs of printing and mailing.

Illinois Club Competition:
Illinois entrants are encouraged to include the name of their local club on their entries. A traveling plaque sponsored by the Western Illinois Amateur Radio Club will be updated with name and score of the top IL club aggregate score.
Illinois Edible Award: Any Outside Illinois operator who makes at least 200 IL QSOs or works at least 75 IL counties will receive an ‘Illinois Edible Award’.

Logs:
All entrants who use computerized logging are required to submit logs in electronic format. Do not submit a computer printed log from a logging program without also submitting the electronic file (i.e. Cabrillo file) as the scoring and verification process starts by transferring all log data into a master Excel file. Hand written paper logs which are accompanied by an official ILQP Summary Sheet will be accepted for manual transcription by the Committee.

Electronic logs:
Cabrillo format is preferred. Those entrants using a program that does not produce a Cabrillo file for submission should contact the ILQP Contest Committee concerning acceptable formatting. Electronic logs should be sent as an e-mail attachment to n9jf@... . Participants without e-mail access wishing to submit an electronic log should send the

Cabrillo file on a DOS formatted 3-1/2 inch floppy disk, a 5 inch CD-ROM, or a ‘thumb drive’ by mail. Disks and ‘thumb drives’ should be mailed to WIARC, P.O. Box 3132, Quincy IL 62305-3132. Disks and ‘thumb drives will not be returned unless accompanied by as SASE with sufficient return postage.

Paper logs:
A paper log shall be hand written and indicate the entrant’s QTH, the band and mode, UTC, the call of the station worked, RST sent and received, and the state, province, IL county, or DX country. New multipliers must be marked in the log. Paper log submissions must be accompanied by a completed ILQP summary sheet (can be downloaded, printed from the website or requested from the sponsor with SASE). Paper logs should be mailed to WIARC, P.O. Box 3132, Quincy IL 62305-3132.
Logs that do not comply with submission requirements will be classified as Check Logs and will not be eligible for awards.
Rev 0 – 5 September 2016

Submission deadline:
Logs sent by e-mail must be received by and logs sent by mail must be postmarked by midnight, CST November 23, 2017. A list of all logs received will be posted to the ILQP webpage. Electronic logs received by e-mail will also be acknowledged by return e-mail. Entrants assume responsibility for contacting the event sponsor if they do not receive confirmation or if their call is not included in the “logs received” listing.

Disqualification:
Participants are expected to follow good Amateur practices and operate within the restrictions of their license and in accordance with ILQP Rules. Compelling evidence to the contrary may serve as grounds for disqualification. The decision of the Illinois QSO Party Committee shall be final. Rules, summary sheet, and other information are available for download at http://www.w9awe.org/ILQP2017.html .
You are invited to join the ILQSO email reflector at
http://mailman.qth.net/mailman/listinfo/ilqso .

Miscellaneous:
County Name Abbreviations: Participants are reminded that a proper log record of a contact with an Illinois station in this event requires the name of the Illinois County where that station is located be entered as part of each QSO record. It is quite acceptable to enter either the complete and correctly spelled county name or the unique abbreviated form of the county name. To facilitate the use of abbreviations, a list of recommended Illinois County name abbreviations is included every year as part of the ILQP Summary sheet. Each Illinois County has an established 4 letter abbreviation (Lee County excepted) shown in this list and which has been in use in this event for many years. Unfortunately, logs are submitted every year with all manner of variation and corruption of these abbreviations. In the past the ILQP Committee has been very lenient in not busting QSO’s due to the use of a non-standard abbreviation as long as there is some unambiguous clue in the abbreviation used as to the actual county name. In some cases, we even find that the wrong county name has been used. This often involves White (WHIT) and Whiteside (WTSD) counties as well as Mason (MASN) and Macon (MACN) counties. The ILQP Committee asks that each entrant review the list of county name abbreviations on the summary sheet and use only these abbreviations in their log entries and to make sure the correct abbreviation for a given county is used. As mentioned, there has been great leniency in the past for the use of highly corrupted, widely varying or totally incorrect abbreviations. However, as this event is now generating a master log each year of nearly 50,000 QSO’s, manual intervention by committee members in

the scoring process is becoming tedious and time consuming. And so, a word to the wise, in the future, this leniency will not be continued as a part of the scoring process.

QSO Record Minimum Data:
Each entrant is asked to review their log file prior to submission to ensure that every QSO record (i.e. each line) includes the following minimum data: operating frequency or band; operating mode; GMT date; GMT time; the call sign of your station; the RS(T) sent; the location of your station; the call sign of the station contacted; the RS(T) received; and the location of the station contacted. In addition, in a Cabrillo log file, each record should include the following data: ‘QSO:’ in the first field of each line. Please examine the sample excel spreadsheet generated Cabrillo file that is available for down load on the WIARC ILQP web page. Also please review the sample log file at the end of the document for help in determining compliance with the preferred format.
Cabrillo File Header Information: Prior to submitting a log file, entrants should review the information contained in the header field of their Cabrillo file to make sure it is complete and accurate. In particular, make sure entry class, personal information, call sign, station location, and club affiliation are correctly shown. The header information is automatically pulled and used by the processing software. Please examine the sample excel spreadsheet generated Cabrillo file that is available for down load on the WIARC ILQP web page.

Subject: ARRL On-Line Auction Preview Now
To: wb9qzb <wb9qzb@...>

|
|
| This year the 12th Annual ARRL On-Line Auction will run from October 20th through October 26th, with the preview starting October 18th, and has over 250 items up for bid.

The 2017 auction includes QST "Product Review" gear (already ARRL Lab-tested!), vintage books, pre-owed gear, one-of-a-kind finds, and the ARRL Lab team has contributed four, of the very popular, "mystery boxes."

Some of the premier items up for bid from the QST "Product Review" inventory include the Flex Radio Systems Flex-6500 SDR Transceiver and Updated SmartSDR for Windows Software, Elecraft KX2 HF QRP Transceiver, Kenwood TH-D74A Analog and D-Star VHF/UHF Transceiver and Yaesu FT-891 HF and 6-Meter Transceiver.

Among the book offerings are The World of Ham Radio 1901-1950, a special defense edition of The Radio Amateur’s Handbook from 1942 and Fundamental of SSB by Collins.

Proceeds from the yearly On-Line Auction benefit ARRL education programs. These include activities to license new hams, strengthen Amateur Radio Emergency Service training, offer continuing technical and operating education, and create instructional materials.

All bidders need to register. Please note that your arrl.org User ID and password will not work on this site. If you have previously registered you may use the same log-in information. If you have forgotten, simply click the “Help” tab and you’ll find instructions as to how to retrieve your password or User ID. Please also take this opportunity to make sure we have your updated address and other information if you plan to bid and the auction site only accepts Visa and MasterCard. |

America Link Net Available on Facebook Live at Yaesu Facebook page
https://www.facebook.com/groups/yaesuusa/
On Saturday October 28th (9pm Eastern, 8pm Central, 7pm Mountain, and 6pm Pacific) in Wires-X Room # 21080, FCS002-90, or FCS003-90 the America Link net will be doing an Interview with Yaesu USA Sales Manager John Kruk.

While question submission is closed at this time a wide variety of questions have been submitted and will be answered. Yaesu will attempt to Facebook Live this interview but cannot guarantee the quality or ability. No questions will be answered or taken via Facebook.

Please feel free to tune in via the above listed rooms/reflectors or via Facebook Live.

Best Regards,
John Kruk - N9UPC
Yaesu USA Amateur

How The Special Net Will Be Conducted
On Saturday the 28th of October only, we will start check-ins at 8:30PM. We will dispense with the section 1,2 and 3 check-ins.
At 9:00 PM we will start the NET. The instructions will be given on how the NET is to be conducted.
Mr John Kruk N9UPC, Sales Manager Yaesu USA, will engage in interviews as directed by NET control, and answer the list of questions submitted earlier. The list is attached for your convenience.
Submitters that are present will be asking their questions interactively with John. All submitted questions will be answered.
During the course of the interview, stations wanting to comment or needing clarification may break in through NET control.
Net Control and Mr. Kruk encourages interactive dialog with listeners.
After the end of the submitted questions, the NET will hold a Question and Answer session.

3493. Attempting to Contact List Owner/Moderator

Yahoo group: IndyHamRadio
Date: 2017-11-18 01:45:17 UTC
From: Steven Read
Topic: 3493 Message: 3493

I am attempting to contact the owner or moderator of this group. I have tried sending email to indyhamradio-owner but have not received anything in reply.

Steven Read - ab9ol - (em79jt) Dublin, IN

Steve

I am a co-moderator here...what can I help you with?
